Quality Assessment Record

Report Version: 1.0
Report Written by: Russell Grey
Report Issue Date: 21st May 2024

1 INTRODUCTION

1.1 The Scheme

1.1.1 Etive Ecology Ltd was commissioned by DG Design Services Ltd to undertake an ecological appraisal of a plot of land at Lilac Cottage, Stringers Lane, Wrexham. The plot is centred on National Grid Reference SJ 3466 5871.

1.1.2 The site is proposed for the construction of a new double garage at the southern edge of an existing garden. This Preliminary Ecological Appraisal (PEA) has been undertaken to inform the planning application.

1.2 Scope of this Report

1.2.1 The ecological appraisal of the proposed scheme is broadly based upon the *Guidelines for Preliminary Ecological Appraisal* (Chartered Institute of Ecology and Environmental Management, 2017).

1.2.2 The aim of the assessment is to obtain information on the existing ecological composition and value of the site, and to conduct a preliminary assessment of the likely significance of ecological impacts. To achieve this, the following steps were taken:

- The field survey area and the 'zone of influence' of the scheme, have been identified.
- A desk study has been undertaken to establish the site baseline, including the use of aerial imagery, site photographs and the purchase of records from Cofnod.
- Baseline information on the site and surrounding area has been recorded through an 'extended UKHab survey', including a UKHab habitat survey (UKHab 2020) and consideration of notable and/or protected habitats and species (IEA 1995).
- The ecological features found to be present have been evaluated (CIEEM, 2023).
- Invasive plant and animal species (such as those listed on Schedule 9 of the Wildlife & Countryside Act [WCA]) have been identified.
- Potential constraints to the proposed development and any ecological impacts arising from the development have been identified.
- Recommendations for further survey have been made, where appropriate.
- Mitigation recommendations have been provided based on current information.

1.2.3 A UKHab Map of the survey area is presented in **Appendix A.** Target notes are marked on the Phase 1 Habitat Map and are used to link the report text to locations on site. Photographs taken during the survey are presented in **Appendix B**. A copy of the biological records returned for the site are found in **Appendix C**.

2 METHODOLOGY

2.1 Desk Study

2.1.1 A desk study was undertaken to identify any nature conservation sites within 1km of the site. The desk-based exercise also considered the potential for protected and/or notable species of fauna to be found within 1km of the site.

2.1.2 The following sources of information were utilized:

- MAGIC website (http://www.magic.gov.uk/MagicMap.aspx)
- Natural Resources Wales (https://naturalresourceswales.gov.uk/?lang=en)
- Wrexham County Borough Council website (https://www.wrexham.gov.uk/)

2.1.3 A data request was made to Cofnod for a standard search criterion with a 1km search radius from the centre of the site. This included all statutory and non-statutory designated nature conservation sites and all legally protected and/or notable species of flora and fauna.

2.2 Extended UKHab Survey

2.2.1 The initial site visit was made on the 29th April 2024.

2.2.2 The survey comprised an extended UKHab Survey. This survey method follows the habitat assessment and classification procedure outlined by the UKHAB Handbook (UKHab, 2020), whereby all habitats are identified, described, and mapped using a standard classification.

2.2.3 The extended component of the survey is developed from the methodology described in Guidelines for Baseline Ecological Assessment (IEA, 1995). All habitats and features within the survey area are assessed for their potential to support legally protected or notable species (nationally or locally).

2.2.4 These species include:

- **Amphibians**: ponds within 250m of the site were considered for their suitability to support a range of amphibians, including great crested newts (GCN).
- **Reptiles**: the site was assessed for suitable habitats including rough grassland, cloddiau, brownfield sites and habitat edges in general which would provide cover, basking and foraging habitat for reptile species.
- **Otters**: watercourses within 100m of the site were checked for signs of otter and assessed for their suitability to support the species.
- **Water voles**: watercourses on site were checked for signs of water vole presence and assessed for their potential to support the species.
- **Bats**: all trees and structures on site were assessed as to their suitability to support roosting bats at any point during the year. Trees and structures were then categorised for their potential to support roosting bats as per the *Bat Surveys for Professional Ecologists – Good Practice Guidelines* (Collins, J., 2023).
- **Birds**: the site was assessed for suitable habitats for nesting birds, including habitats suitable for ground-nesting species.
- **Badgers**: all habitats within 30m of the site were surveyed where possible to identify the presence of any setts or signs of badger activity.

- **Invasive plant species**: this assessment does not constitute a full Schedule 9 species survey. The potential for any Schedule 9 species was assessed and any species that were encountered were mapped and noted.

2.3 Assessment of Ecological Value

2.3.1 The value and sensitivity of ecological features was determined based on the guidance given in *Guidelines on Ecological Impact Assessment* (CIEEM, 2023). Individual ecological receptors (habitats and species that could be affected by the development) were assigned levels of importance for nature conservation in one of the following categories:

- International
- UK
- National
- County
- District;
- Local, or
- within the immediate zone of influence or site only.

2.3.2 For a given receptor, determination of value includes consideration of the size, secondary or supporting value/function, conservation status and quality of the species or feature.

2.4 Limitations

2.4.1 The site survey was undertaken just outside of the recommended survey season for Phase 1 Habitat survey. However, such is the nature of the site and its current management (existing residential plot) that the habitats were relatively straightforward to identify.

2.4.2 There were no access constraints; all land within the red line site boundary was accessible at the time of survey.

2.4.3 There are therefore considered to be no significant limitations to the undertaking or accuracy of the survey work or subsequent ecological appraisal.

3 RESULTS

3.1 Desk Study

Designated Sites

3.1.1 There are no statutory sites for nature conservation located within 1km of the site.

3.1.2 There are no non-statutory nature conservation site within 1km of the site.

Species Records

3.1.3 A full list of the species records within a 1km radius of the site is presented in **Appendix C** and a summary is given below:

- Amphibians; great crested newt and smooth newt.
- Bats; brown long-eared bat, common pipistrelle and Noctule bats.
- Birds; various bird species including barn owl, bullfinch, cuckoo, dunnock, fieldfare, grasshopper warbler, house sparrow, redwing, song thrush, starling and tree sparrow.
- Invertebrates; various winged invertebrate species including azure damselfly, migrant hawker and ruddy darter.
- Mammals; badger, brown hare and hedgehog.
- INNS; Canadian waterweed, Japanese knotweed, Himalayan balsam, rhododendron and montbretia.

Environment (Wales) Act 2016

3.1.4 Section 7 of the Act replaced the 'Biodiversity duty' in Section 40 of the Natural Environment and Rural Communities (NERC) Act 2006, which requires all public bodies to have regard to biodiversity conservation when carrying out their functions. This is commonly referred to as the 'Biodiversity duty'.

3.1.5 The Section 7 list is now used to identify those habitats and species of Principal Importance in Wales under the Environment (Wales) Act. The following relevant habitats and species are found on this list:

Table 3.1.1 Relevant Section 7 Habitats/Species

Habitats	Species
Lowland mixed deciduous woodland	Great crested newt
Hedgerows	Hedgehog
Coastal and floodplain grazing marsh	Brown hare
Traditional orchard	Various bat species
Arable field margins	Various bird species
	Various insect species

3.2 Extended UKHab Survey

3.2.1 The walkover survey was undertaken by Russell Grey (BSc, CEnv, MCIEEM). The survey was undertaken on a warm and overcast spring day, with no constraints to the survey of any part of the red line application site.

3.2.2 The application site is located approximately 2km to the west of Rossett, within the rear garden of the existing residential plot of Lilac Cottage immediately adjacent to Stringers Lane. The site is within a rural setting, with mixed farmland on all sides, occasional pockets

of woodland, hedgerows and rural properties. There are a number of field ditches within 1km, but the nearest main river is the Afon Alun 1.9km to the southeast. There are no ponds located on site and two within 250m (~225m to the south).

Habitats

3.2.3 The habitats present on site are described in the following Target Notes, with potential ecological receptors identified:

Target No.	Notes	Ecological Receptor(s)
1	The footprint of the proposed development comprises an overgrown garden lawn comprising rank grasses such as false oat-grass, Timothy and perennial rye-grass, as well as frequent forbs such as ribwort plantain, dandelion and creeping buttercup.	
2	Mature oak immediately adjacent to the south of the application site boundary. The tree is ~15m in height and 1m diameter at breast height. The tree is 80% covered in ivy and has occasional dead wood within the canopy. No obvious features suitable to support roosting bats were noted from the ground, other than the ivy cover.	Roosting Bats Nesting birds
3	Native hedgerow forming the eastern boundary of the site, comprising hazel, hawthorn, blackthorn and occasional cherry laurel (non-native), dog rose and ivy.	Nesting Birds Hedgehog Foraging/commuting Bats
4	Native hedgerow forming the western boundary of the site, comprising hazel, hawthorn, blackthorn and oak, with occasional dog rose and ivy.	Nesting Birds Hedgehog Foraging/commuting Bats
5	Native hedgerow forming the northern boundary of the site, comprising privet with occasional hawthorn.	Nesting Birds Hedgehog Foraging/commuting Bats
6	Mature poplar located in the northeast corner of the site. The tree is ~20m in height and 950mm diameter at breast height. The tree has undergone some trimming and canopy raising in recent years, reducing it to two main stems from 4m height. No obvious features for roosting bats were noted from the ground.	Nesting Birds Foraging Bats
7	Existing residential property of Lilac Cottage, undergoing significant refurbishments works at the time of survey. The property is surrounded by bare ground which is likely to be reinstated as paving areas.	
8	Arable land to the east of Stringers Lane and also to the south and west of the site.	
9	Improved grassland pasture (modified grassland) located adjacent to the north of the residential plot.	

3.2.4 In summary, the application site comprises a small area of unmanaged garden lawn and a roadside native species-poor hedgerow, with occasional stems of non-native cherry laurel. The site is surrounded by mixed farmland and is bordered by Stringers Lane; a narrow minor country land. To the north of the application site is the existing plot of Lilac Cottage, surrounded by further native hedgerows and vegetated garden habitat. Overall, the site is dominated by habitat of low ecological value, with the native hedgerows and adjacent mature trees of potential high value (if managed appropriately).

Protected Species

3.2.5 The following text summarises the suitability of the survey area to support various legally protected species, based on the descriptions provided in the above target notes.

Amphibians

3.2.6 There are no water-bodies within the site boundary and two ponds within 250m, both of which are located beyond 220m to the south and in private land. Given the extensive coverage of GCN within the Wrexham area, it is reasonable to assume that GCN are likely present within these ponds. Therefore, there are considered to be a number of potentially suitable breeding sites for amphibians within relatively close proximity of the application site.

3.2.7 The terrestrial habitat found within the application site is considered to be of low value to amphibians. The grassland of this existing residential plot remains quite short and is lacking in any vegetation structure that would create opportunities for foraging or sheltering amphibians. The habitat also offers poor connectivity for dispersal. However, the boundary hedgerows are of greater potential value and could be valuable to amphibians as dispersal corridors or over-wintering sites.

3.2.8 There is a single record of GCN located 780m to the southwest and from 1988. There are no other GCN records within 1km of the site but there is a smooth newt record 850m to the south from 2005. However, the absence of records is likely to reflect an absence of survey effort in this location. It is therefore concluded that GCN are likely present locally but are unlikely to be present on site given the small area of low value habitat that is present.

Badgers

3.2.9 The application site offers low suitability for badgers. The residential use and associated management of the site has created a largely uniform grassland habitat and also means there is a level of disturbance which is likely to deter any significant badger activity. The extensive farmland habitat to the west of the site is much more likely to offer foraging and sett-building opportunities to badgers. [redacted]

3.2.10 [redacted]

Bats

3.2.11 There are two mature trees within the survey area; a poplar at the northeast corner of the residential plot (~50m north of the application site) and an oak immediately adjacent to the south of the application site. The alder is assessed to be of **Negligible Bat Roost Potential** (BRP[1]) owing to the absence of any potential roosting features (PRFs) identified from the ground. The oak was found to be in a relatively good condition, with no specific PRFs identified other than the sparse coverage of ivy covering 80% of the main trunk. As a result of the ivy coverage, the tree has the potential to support small numbers and/or individual bats (i.e. a roost of low conservation significance) and is therefore assessed to be of **Low BRP**.

3.2.12 The grassland and hedgerow habitats present on site are relatively common and widespread locally, and of low value given the size of the site and their relatively poor condition. The hedgerows are likely to offer the greatest value in terms of their foraging and commuting value to local bat populations.

3.2.13 There are a small number of bat records within 1km, including long-eared, pipistrelle and Nocule bats. Overall, there is a low risk of bats being present immediately adjacent to the red line application site boundary, as well as foraging and commuting bats.

Birds

3.2.14 Suitable nesting bird habitat is present within the boundary hedgerows and trees. The grassland is not suitable to support nesting birds. The nearby residential property of Lilac Cottage is currently undergoing refurbishment and is not in a suitable condition to support nesting birds.

3.2.15 Records of numerous species of nesting and wintering bird have been recorded within 1km of the site, including species such as song thrush, starling and house sparrow which may be found on site. Therefore, it is likely that nesting birds are present within suitable habitat on site during the period March to August inclusive.

Reptiles

3.2.16 As described above, the site is comprised of a species-poor grassland sward previously managed as a garden lawn as part of an existing residential garden. The grassland is surrounded by established native hedgerows with mixed farmland in surrounding land. This combination of habitats offers few niches for reptiles where they can bask, forage and take shelter. These habitats are also heavily disturbed by management activities, although the hedgerow network does offer good dispersal corridors.

3.2.17 There are no records of any reptiles <1km of the site. In summary, due to the poor suitability of the on-site and immediately surrounding habitat, reptiles are considered to be absent from within the site boundary.

[1] **High** = trees or buildings with one or more potential roost sites suitable for use by larger numbers of bats on a more regular basis and potentially for longer periods of time. **Moderate** = trees or buildings with one or more potential roost sites that could be used by bats but unlikely to support a roost of high conservation status. **Low** = trees or buildings with one or more potential roost sites that could be used by individual bats opportunistically but are not suitable to be used on a regular basis by larger numbers of bats. **Negligible** = negligible features likely to be used by roosting.

Riparian Mammals

3.2.18 There are no significant water-courses located within 1km of the site. The nearest such water-course is located 1.9km to the southeast. As a result, the site is not considered to be suitable or accessible to otters. There are also no minor water-courses on site or directly connected to site, which could support water voles. No evidence or signs of either species of riparian mammal were noted at the time of survey.

3.2.19 There are no records of either otter or water vole within 1km. Therefore, it is concluded that both otter and water vole are absent from the site boundary and surrounding land.

3.3 Notable Species

3.3.1 The site has the potential to support hedgehogs and an assemblage of common and widespread species of invertebrates, given the existing use of the site for residential occupancy. There are records of hedgehog and numerous winged invertebrate species <1km.

3.3.2 Given the existing residential management of the site, it is considered highly unlikely that any notable flora would be present. No such species were identified on site at the time of survey. are absent from the site currently. No records of notable flora were identified within the Cofnod data.

3.4 Invasive Non-Native Species (INNS)

3.4.1 No species listed on Schedule 9 of the Wildlife and Countryside Act 1981 (as amended) were identified on site during the survey. However, a number of INNS have been recorded <1km of the site, including Himalayan balsam, cotoneaster and rhododendron.

3.4.2 The eastern site boundary comprises a small number of plants of cherry laurel, which is a non-native garden escape of negligible biodiversity value.

3.5 Key Ecological Receptors

3.5.1 The extended UKHab Survey has identified the following key ecological receptors associated with the site:

- Habitat; the boundary hedgerows are all primarily native in composition and are likely to qualify as Habitat of Principal Importance in Wales. Site *value*
- GCN; the site has low potential to support GCN during their terrestrial phase and the species is known to be present locally. *Local value*
- Bats; one tree with Low BRP is located adjacent to the south of the application site. There is also foraging/commuting value associated with the site boundaries. *Local value*
- Nesting Birds; potential for nesting birds within the site boundary vegetation. *Local value*
- Notable Species; site has the potential to support hedgehogs and various species of invertebrate. *Local value*

3.5.2 The protected species / ecological receptors not bullet-pointed above are considered to be of *less than local value*.

3.6 Net Benefit for Biodiversity (NBB)

3.6.1 The existing site is considered to be of low ecological value and offers little in terms of its ecological functionality or ecosystem services. The site has traditionally been a residential plot with surrounding gardens, set within a mixed farming area. In terms of its biodiversity value, there is limited potential associated with the site, even if managed for its ecological functionality. But overall, the baseline value for the site is low.

4 DISCUSSION

4.1 Proposed Scheme

The Development

4.1.1 The proposed development is to construct a new double garage within the application site boundary, located at the southern end of the existing larger residential plot. The proposed site layout is presented in **Figure 2** (Appendix A).

4.1.2 The double garage will sit within the existing garden lawn area. There will be the loss of a 5m section of the eastern boundary hedgerow to facilitate a new vehicle access point. The proposed footprint sits within the root protection area of the adjacent oak tree to the south of the site.

4.2 Likely Impacts

Habitat

4.2.1 The scheme will result in the permanent loss of up to 5m of the existing native species-poor hedgerow that marks the eastern site boundary. This will be removed to facilitate the construction of a new vehicle access point for the new garage. There will also be the loss of ~36m^2 of grassland to the footprint of the garage and ~40m^2 to the permeable driveway.

4.2.2 There is also a risk of adverse impacts on the adjacent mature oak tree as a result of the development footprint overlapping the root protection area of this tree. The construction of foundations for the new garage risks damage to the tree roots and potential impacts on the longevity of the tree.

GCN

4.2.3 The risk posed to GCN is as a result of the habitat loss described above. There is a small likelihood that GCN are present within the hedgerow along the eastern boundary of the site. The removal of this hedgerow poses a risk of direct harem to any amphibians located within it. The long-term loss of this hedgerow poses a small permanent loss in suitable habitat. The severance of this roadside hedgerow also reduces connectivity and dispersal routes for the species.

Bats

4.2.4 As described above, it is possible that the construction of the proposed garage will impact the roots associated with the mature oak tree adjacent to the south of the site. If this were to occur, then there would be a risk of the tree's health being impacted and its longevity reduced. If this were to occur, then there would be a knock-on adverse impact on any bat roost that may be present within the tree.

4.2.5 The construction of the proposed garage is considered unlikely to pose a significant disturbance to any bats that may be roosting within the adjacent oak tree. The footprint of the garage is approximately 10m from the tree. In the context of the site, the tree is located immediately adjacent to Stringers Lane, which sees regular vehicle traffic and therefore an established level of background disturbance, against which construction noise would be a minor increase and short-term in duration.

4.2.6 The loss of 5m of roadside hedgerow is a permanent loss of foraging/commuting habitat. There is also a risk of long-term operational disturbance as a result of any artificial lighting that is installed on or around the new garage.

Nesting Birds

4.2.7 The scheme is likely to pose a minor impact on a small number of common/widespread species of breeding bird, through the loss of the small section of hedgerow and the short-term disturbance of habitat during the construction period. The magnitude of these impacts will partly depend on the timing of site clearance and construction activities.

Notable Species

4.2.8 There is a risk of direct harm to hedgehogs as a result of the loss of hedgerow and garden vegetation that lies within the footprint of the proposed development. The permanent loss of these habitats will also result in the loss of carrying capacity for invertebrates and other biodiversity interests.

INNS

4.2.9 Any development works on site pose a risk of introducing INNS onto site by way of vehicle tyres and/or any imported materials such as topsoil. There is also a risk of allowing/causing cherry laurel to persist and spread on site and potentially off-site in adjacent land.

4.3 Recommendations

Habitat

4.3.1 It is recommended that a Hedgerow Enhancement and Management Plan is prepared for the site, to offset the adverse impact of hedgerow loss. This plan should details immediate hedgerow protection measures to be implemented on site, to minimise ongoing impacts associated with the adjacent property refurbishment. The plan should also include the removal of all non-native species from all hedgerows within the land ownership boundary of Lilac Cottage, the replanting of resulting gaps with mixed native species and the long-term conservation management of all boundary hedgerows. The objectives of the plan would be to improve the biodiversity value and functionality of these hedgerows, whilst also delivering landscape/aesthetic value.

4.3.2 It is recommended that tree protection measures are implemented for both of the two mature trees present within or immediately adjacent to the Lilac Cottage site boundary. These measures will ensure no (further) construction related impacts. A Method Statement for the protection of tree roots associated with the proposed double garage and the adjacent mature oak tree should also be prepared and implemented in full to ensure there is no long-term impact on this tree from the proposed scheme.

GCN

4.3.3 To manage and mitigate the low risk of directly impacting GCN as a result of the hedgerow removal, it is recommended that the following Reasonable Avoidance Measures (RAMs) be implemented on site:

- A pre-commencement Toolbox Talk will be delivered to the site personnel working on the development. This will provide information relation to GCN identification, ecology and legal status, as well as the details and requirements of these RAMs.
- Above ground vegetation will be cleared using hand tools (strimmers, brush-cutters, chainsaws) to a sward height of 300mm. This work will be undertaken under the direct supervision of a GCN-licensed ecologist or ecological clerk of works (ECoW). The area will then be visually inspected by the ecologist who will rescue and remove any amphibians or other animals present.
- The site will then be left for 48 hours before being cut to ground level and hand-searched by the GCN-licensed ecologist. Once the area has been fully searched, it can be topsoil stripped using an excavator.
- Any clearance works described above will be undertaken with care and by hand-tools only, by a suitably experienced contractor.
- If any GCN are encountered, works in the area of the discovery will cease immediately and the risk of encountering GCN will be reassessed.
- During construction works on the new access and garage, the following 'tidy-site' policies will be implemented;
  - all materials will be stored off-ground on stillages or pallets.
  - all rubble/spoil/earth arising from works will be skipped or removed from site on a daily basis.
  - any excavations left overnight will either be back-filled and compacted or else covered by plastic sheeting and secured by plywood batons (or similar) to prevent GCN from gaining access.
  - pre-start checks of the working area will be undertaken each morning, looking for any GCN.
  - all site workers will be made aware of the potential presence of GCN and an identified sheet will be kept on site in case any of these animals are encountered.

4.3.4 The above RAMs have been designed such that the site can be carefully cleared without harming GCN and that subsequently the site is kept tidy and unsuitable for these species to utilise, so that they do not take refuge within the working area.

4.3.5 As described in 4.3.1 above, habitat on site will be enhanced long-term through a targeted hedgerow enhancement and management plan. This will benefit GCN by providing improved sheltering, foraging and dispersal habitat.

Bats

4.3.6 As described in 4.3.2, it is recommended that a Method Statement is prepared and implemented to ensure there are no direct impacts to the roots of the oak tree with Low BRP. Provided this measure can be implemented, it is considered that the risks posed to roosting bats is minimal and no further bat survey effort would be required.

4.3.7 To ensure potential impacts from artificial lighting are avoided, all new lighting installed as part of the proposed development should follow these guidelines;

- No new lighting elements should be located within 5m of any retained or adjacent hedgerow / trees.
- All new lighting should be capped to direct light below the horizontal plane.
- No lighting should spill onto land within 2m of the adjacent woodland or trees.
- Lighting should be motion-sensor activated.

- Where possible, all new lighting should comprise low lux levels from lighting elements emitting warm white light (and ideally red light).

4.3.8 As described in 4.3.1 above, habitat on site will be enhanced long-term through a targeted hedgerow enhancement and management plan. This will benefit bats by providing improved foraging and commuting habitat.

Nesting Birds

4.3.9 To deliver enhancements for nesting birds it is recommended that two bird boxes are installed onto suitable trees or buildings within the boundary of Lilac Cottage. These boxes should comprise 32mm hole boxes, house sparrow terraces or swift boxes.

4.3.10 Ideally, all vegetation clearance will take place outside of the nesting bird season, taken as March to August inclusive. Where this is not possible, vegetation clearance must be preceded by a nesting bird survey undertaken by an experienced ecologist. Where any active nests are found, a suitably sized buffer will be installed within which no clearance can take place until such time as the nest becomes inactive.

Notable Species

4.3.11 The RAMs given in 4.3.3 are appropriate in avoiding direct harm to any hedgehogs that may be present within the existing hedgerow. These should be implemented in full.

4.3.12 As described in 4.3.1 above, habitat on site will be enhanced long-term through a targeted hedgerow enhancement and management plan. This will benefit hedgehogs ang common/widespread invertebrates by providing improved foraging, dispersal and sheltering habitat.

IINS

4.3.11 It is recommended that all non-native species of vegetation are removed from the existing site hedgerows and that all hedgerow replacement planting comprises native species only. Furthermore, a post-development inspection should be undertaken and evidenced to confirm the absence of any INNS from the site boundary.

4.4 Net Benefit for Biodiversity (NBB)

4.4.1 The proposed development of the site has the potential to deliver a Net Benefit for Biodiversity, provided biodiversity the measures detailed herein are implemented in full. The scheme will result in a loss of semi-natural habitat, which must be minimised as far as reasonably possible and then the residual impacts offset. The key elements of NBB for the site comprise;

- Retain and protect existing biodiversity features; all trees (on and adjacent to the site) and hedgerows.
- Removal of non-native species from the existing hedgerows.
- Long-term hedgerow enhancement and management, to deliver an improvement to the quality and function of the existing hedgerows.

4.4.2 These proposed measures fit with the DECCA Framework and will deliver an NBB by:

- Increasing diversity within site-level ecosystem.

- Increasing the extent/scale of the site-level ecosystem.
- Improving the condition of site-level ecosystem.
- Improving connections within and between the site-level and surrounding ecosystems.
- Improving ecosystem resilience and adaptability to future pressures.

5 CONCLUSION

5.1 Etive Ecology Ltd was commissioned by DG Design Services Ltd to undertake an ecological appraisal of a plot of land at Lilac Cottage, Stringers Lane, Wrexham. The site is proposed for the construction of a new double garage.

5.2 The assessment comprised of an Extended UKHab survey, a desk study, an assessment of the likely impacts on the ecological value of the site and recommendations for further survey and/or mitigation measures to be implemented to achieve a Net Benefit for Biodiversity.

5.3 A desktop data search identified no statutory or non-statutory nature conservation sites <1km of the site. Protected species records for <1km of the site include GCN, three species of bat, various bird species, badger, hedgehog and various invertebrate species.

5.4 The application site is located approximately 2km to the west of Rossett, within the rear garden of the existing residential plot of Lilac Cottage, immediately adjacent to Stringers Lane. The site is within a rural setting, with mixed farmland on all sides, occasional pockets of woodland, hedgerows and rural properties. The nearest main river is the Afon Alun 1.9km to the southeast. There are no ponds located on site and two within 250m.

5.5 The site comprises a small area of unmanaged garden lawn and is surrounded by native species-poor hedgerows, with occasional stems of non-native cherry laurel in the roadside hedge. There are two mature broadleaved trees located outside of the application boundary. The site and immediately surrounding habitat has the potential to support GCN, roosting/foraging/commuting bats, nesting birds, hedgehog and common/widespread invertebrates. The baseline value of the site for biodiversity is considered to be low.

5.6 The proposed construction of a double garage and new access off Stringers Lane will result in the permanent loss of 5m of hedgerow and ~75m^2 of garden lawn/grassland. There is also a risk of impacting roots from the adjacent oak tree to the south. There will be a risk of harm to GCN, nesting birds and hedgehogs through site clearance. There will be a long-term post-development impact of disturbance on foraging/commuting bats.

5.7 Recommendations are made to avoid impacts to trees/roots through the implementation of a Root Protection Method Statement. This will also avoid the need for further bat surveys on the adjacent oak tree. RAMs should be implemented during site clearance to avoid harming GCN and hedgehogs. Pre-clearance checks for nesting birds should also be undertaken during the nesting bird season. All new artificial lighting should adhere to the broad guidelines provided. Net Benefit for Biodiversity can be achieved on site through the preparation and implementation of a Hedgerow Enhancement and Management Plan, to deliver broad ecological gains for a variety of species.

5.8 In conclusion, the application site is found to be of low ecological value, but with low potential to support legally protected and/or notable species. Provided the recommendations detailed herein are implemented in full, the scheme can deliver an overall Net Benefit for Biodiversity.

Important Information

- Use of the data is governed by Cofnod's Terms & Conditions.
- Data marked as confidential or sensitive must not be released into the public domain, with the exception of the Public Version of the PDF report, which has had sensitive information removed or restricted.
- You should not amend any part of the downloaded records.
- Unless otherwise agreed, use of the data is valid until the Expiry Date (16/11/2024).
- Past records of presence of a habitat or species do not guarantee continued occurrence; absence of records does not imply absence of a species, merely that no records are held by Cofnod; Cofnod cannot guarantee the accuracy of supplied data; copyright of records remains with the original recorder.
- The Dataset ID associated with each record can be used to find information about the provenance of the data. See the Cofnod Metadata page for more information.
- Verification Levels are given for each record and indicate whether the record has been assessed by an expert.
- Please contact us if you have any questions about using the data or wish to add further Data Users.

Notes

- Records with 1km, 2km, 5km, 10km or 100km grid references (where present) are highlighted with, for example, (1km) next to the distance to indicate that the distance

should not be considered to be exact given the vague nature of the grid reference.

• Records shown in **bold** typeface are sensitive species records, and some details have been restricted in this public version of the report.

Verification Levels

- **UA:** Unassessed
- **PC:** Probably Correct
- **KC:** Known Correct
- **NA:** Not Required

Species Categories

- **All Other Species:** Any species not included in other categories
- **Category 1 Species:** Species with European and/or UK Legal Protection, Section 7 Species or UK BAP Priority Species
- **Category 2 Species:** Global Red List, British Red Data Book, Nationally Rare & Scarce, Welsh Red and Amber Birds & Welsh Red Data Lists, not identified in Category 1
- **Category 3 Species:** Local species not identified under Categories 1 & 2, Locally Important species as specified by local experts

Data Description

Distance	Indicates the distance, in metres, between the grid reference of the record (using the central point of the grid square) and the search location. For any Sensitive Species Records, this should not be released into the Public Domain.
Species Name	Name of the taxon (usually identified to species level) using the binomial system.
Grid Reference	Grid reference based on the Ordnance Survey grid system.
Date	Date on which the record was made. In some cases this might be a date range, or a vague date such as 'Summer 2010'.
Recorder(s)	One or more people who made the original observation and recorded it in some way. It may have subsequently been included in a data collation by another person or it may have been submitted to the LERC directly.
Abundance	Number of individuals recorded. Where not specified it is assumed that at least one was present.
Record Type	A description of the type of record.
Site Name	The site name (if one has been supplied). For any Sensitive Species Records, this cannot be released into the Public Domain.
Notes	Any additional notes about the sighting. For any Sensitive Species Records, this cannot be released into the Public Domain.
Dataset ID	ID of this dataset. See 'Important Issues' for more details.
Lists	Any local, national or international conservation statuses or legal protection which apply to this species and whether it is included in any Local Biodiversity Action Plans. See 'Abbreviations' for more details.
V	An indicator showing the level of confidence held in the record's correct identification.

- PUBLIC VERSION -

Dataset Information

The records in these results are drawn from the following datasets. Use the Dataset ID next to each record to find its dataset.

Dataset ID	Title	Acknowledgements	Type
D0026/036/01	Records captured from CCW regional files - CCW Files SJ26.3.1 & SJ26.3.2 - SSSI: Buckley Claypits And Commons - Scientific Information - Standard	Cyfoeth Naturiol Cymru/Natural Resources Wales	Species
D0059/001/03	North Wales badger records held by Clwyd Badger Group (including some historic data) - CBG Historic sett data	Clwyd Badger Group (clwydbadgergroup@btinternet.com)	Species
D0062/008/01	Vice-County dataset - Bird records from Flintshire and Denbighshire Vice-counties (50 and 51) - All records up to 2018	Ian M Spence (Clwyd Bird Recording Group)	Species
D0101/001/01	Historic Vice-County dataset - Vascular plant records from Flintshire Vice-county (50) digitised by Cofnod - Species summary cards	Goronwy Wynne (BSBI Vice County Recorder)	Species
D0132/001/02	Green Shoots North Wales records	British Association for Shooting and Conservation	Species
D0158/003/01	Miscellaneous species records held by North Wales Wildlife Trust in a BIORECS recording database. - Full database	Ymddiriedolaeth Natur Gogledd Cymru/North Wales Wildlife Trust	Species
D0225/001/01	Native Black Poplar records from North East Wales	Les Starling & Trefor Thompson	Species
D0346/002/01	eBird records - 2021 records from Cofnod area	Cornell Lab of Ornithology	Species
D0346/007/01	eBird records - 2023 records from Cofnod area	Cornell Lab of Ornithology	Species
D0969/001/05	Miscellaneous species records submitted to rECOrd	rECOrd	Species
D1072/001/02	Mammal records from Britain from the Atlas of Mammals (1993), with some subsequent records	Biological Records Centre (NBN Download)	Species
D1075/001/06	Bryophyte data for Great Britain from the British Bryological Society held by BRC: Atlas 2014 - North Wales data	British Bryological Society (NBN download 04/12/2019)	Species
D1117/001/01	ad hoc Cofnod Online Recording System records	Individual Recorder(s)	Species
D1169/004/04	Vice-County dataset - Vascular plant records from Denbighshire Vice-county (50). - Complete dataset	Delyth Williams (BSBI Vice County Recorder)	Species
D1295/001/06	Dragonfly records from the British Dragonfly Society Recording Scheme - Records from the Cofnod area	British Dragonfly Society Recording Scheme 2023. NBN Atlas occurrence download at NBN Atlas accessed on 23 January 2024.	Species
D1297/020/01	BirdTrack records - 2015 records from within the Cofnod boundary	British Trust for Ornithology & Individual Recorders	Species
D1297/025/01	BirdTrack records - 2004-2018 data from Vice-Counties 50 & 51 (Denbighshire & Flintshire)	Ian M. Spence and British Trust for Ornithology	Species
D1297/026/01	BirdTrack records - 2019 data from Vice-County 50 (Denbighshire)	Ian M. Spence and British Trust for Ornithology	Species
D1297/039/01	BirdTrack records - 2020 records for Vice-County 50 (Denbighshire)	Ian M. Spence and British Trust for Ornithology	Species

- PUBLIC VERSION -

D1297/047/01	BirdTrack records - 2021 records from within the Cofnod boundary (excluding Meirionnydd)	Julian Hughes & British Trust for Ornithology	Species
D1297/050/01	BirdTrack records - 2022 records for Vice-County 50 (Denbighshire)	Ian M. Spence & British Trust for Ornithology	Species
D1297/051/01	BirdTrack records - 2023 records from within the Cofnod boundary (excluding Meirionnydd)	Julian Hughes & British Trust for Ornithology	Species
D1308/002/01	Flintshire (VC51) County Rare Plant Register - Brown, B.M. 2020 'The Rare Plants of Flintshire' (Based on the original edition by Goronwy Wynne, with Delyth Williams & Joe Phillips). BSBI.	Botanical Society of the British Isles	Species
D1587/001/01	Plant records collected and collated by Jonathan Shanklin from VC51 (Flintshire) - Records from 2013	Jonathan Shanklin	Species
D1587/028/01	Plant records collected and collated by Jonathan Shanklin from VC51 (Flintshire) - April 2019	Jonathan Shanklin	Species
D1587/047/01	Plant records collected and collated by Jonathan Shanklin from VC51 (Flintshire) - Records from August 2022	Jonathan Shanklin	Species
D1682/001/03	National Bat Monitoring Programme Field Survey - Records from the Cofnod area, received March 2020	Bat Conservation Trust	Species
D1696/001/01	Miscellaneous species records collected by Marches Ecology on behalf of various clients - Records from miscellaneous reports entered by Marches Ecology	Marches Ecology	Species
D1775/001/02	Tir Cynnal and Tir Gofal Monitoring and Evaluation Programme: Field-scale winter surveys of yellowhammers	Welsh Government (NBN Download, 13/11/2019)	Species
D1779/001/02	Tir Cynnal and Tir Gofal Monitoring and Evaluation Programme: Whole-farm surveys for yellowhammer and curlew	Welsh Government (NBN Download, 12/11/2019)	Species
D1844/005/03	iRecord data for the Cofnod area (Verified records) - Records downloaded 11/03/2024 (verified on iRecord)	iRecord and Individual Recorders	Species
D1847/001/01	Hogwatch and Rural Landowner surveys	People's Trust for Endangered Species	Species
D1852/001/01	RSPB Big Garden Birdwatch winter sightings in the UK in 2008 - 2008 records	RSPB (NBN Download, 16/01/2019)	Species
D1852/002/01	RSPB Big Garden Birdwatch winter sightings in the UK in 2008 - 2009 records	RSPB (NBN Download, 16/01/2019).	Species
