Executive Summary

Richards, Moorehead and Laing Ltd were commissioned by Lawray Architects, to undertake a Preliminary Ecological Assessment, to include a Preliminary Roost Assessment and bat activity survey of the Old Library building (a Grade II listed building), which is located on Queens Square, Wrexham.

It is understood that planning permission will be sought for the renovations of the existing building. An ecological survey is required to identify any ecological constraints. The initial surveys (Phase 1 and Preliminary Roost Assessment) were undertaken on the 25th July 2024 by RML. One emergence survey for bats were conducted on the 1st August 2024 and one static bat detector was deployed for a period of five nights.

This report presents the findings of the Extended Phase 1 habitat survey, Preliminary Roost Assessment and bat activity survey, and provides an assessment of the potential effects on ecological features which may result from the proposed works.

No Section 7 habitats would be disturbed/lost. The site is considered to be of low biodiversity value. Statutory designated sites occur more than 1 km away from the site. There is an area at the rear of the building where buddleia was noted growing, this species is not an Invasive Non-Native Species (INNS) but is considered to be a problematic and must not be caused to spread by the renovation works.

No bats have been identified roosting during the PRA, activity survey, inspections and collection/deployment of the static bat detectors, the results indicate that the probability of encountering bats is unlikely.

The site has little value for protected or notable species, and none were recorded on site during the surveys, with the exception of herring gulls, a species of conservation concern. Reasonable Avoidance Measures (RAM's) have been advised for species such as nesting birds and bats, should they be found on site.

Biodiversity enhancements including the provision of native planting in landscape proposals, provisions for bats, nesting birds and the removal or control of problematic plants have been advised.

The details in this report will remain valid for a period of up to two years from the date of this report (August 2024) after which if no site works have commenced, the validity of this assessment should be reviewed to determine whether further updates are necessary.

1 INTRODUCTION

1.1 Background

1.1.1 Richards, Moorehead and Laing (RML) Ltd were commissioned by Lawray Architects, to undertake a Preliminary Ecological Assessment (PEA), to include a Preliminary Roost Assessment (PRA) and bat activity survey of the Old Library building, which is located on Queens Square, Wrexham, at central OS grid reference SJ 33490 50431, referred to as 'the site' here after.

1.1.2 It is understood that planning permission will be sought for the renovations of the existing building. The survey assessment and report are required to identify any ecological constraints. The initial surveys were undertaken on the 25th July 2024 by RML. One emergence survey for bats were conducted on the 1st August 2024 and one static bat detector was deployed for a period of five nights.

1.2 Site location and description

1.2.1 A site location plan is provided in **Appendix A**.

1.2.2 The site lies on Queens Square near the centre of the city of Wrexham. The surrounding townscape is of retail premises with the Council's Guild Hall adjacent to the site.

1.2.3 There are three separate loft spaces within the Old Library building, their locations are indicated in **Photograph 1** below:

***Photograph 1**: the location of the three loft spaces*

1.3 Survey objectives

1.3.1 This report presents the methodology and results of a desk study, habitat appraisal, PRA, bat emergence survey and deployment of a static detector, as well as making initial

recommendations for potential mitigation and enhancement measures to inform a future application for planning permission for the site.

1.3.2 The aims of the survey and report are to:

- Inform the ecological baseline by conducting a PEA to include a PRA to assesses the potential of the structures to support bats and nesting birds and to check for evidence of both species.
- Identify the likely ecological constraints associated with the proposed Scheme.
- Conduct one activity survey and deploy one static detector into the loft space, to determine which, if any, bat species utilise the site.
- Identify any avoidance and/or mitigation measures to ensure compliance with nature conservation legislation and to highlight any potentially significant ecological effects.
- Advise upon any further survey or licence requirements.

1.4 Scheme proposal

1.4.1 It is understood that surveys have been undertaken of the site, including a drone survey[1], at the time of writing this report, works include:

- Removal of the polycarbon roofing sheets and replaced with new.
- Flat felt roofs to be stripped and relaid with new.
- All existing guttering to be cleaned, repaired or replaced as required.
- Removal of the external rear compound wall and the dwarf wall to the existing flower bed to the north.
- A new ground floor extension to the north of the site.
- Repointing of brickwork.
- Remove and replace all existing slipped / missing / damaged slates.
- Review and renew existing lead flashings.
- Complete refurbishment and renewal of existing bell tower.

[1] The drone survey was reviewed to inform this report and further survey requirements.

1.5 Personnel and quality assurance

1.5.1 This report has been written by Katy Morris reviewed Rhodri Edwards and approved by Donna Hall (Full member of the Chartered Institute for Ecology and Environmental Management (CIEEM) bat licensed # S091777-2). The report is issued by RML Ltd.

1.5.2 Ecologist Katy Morris is an Associate member of CIEEM. Katy has a BSc in Environmental Science from Liverpool John Moores University. She has a keen interest in bats. Katy has experience of surveying bats, dormice, otters, water vole, reptiles, and great crested newts. She is also proficient in Phase 1 habitat surveys and is extending her repertoire to include invertebrates, NVC habitat surveys, Green Infrastructure Statement, Habitat Regulation Assessment, QGIS and QField. Katy is currently involved in numerous voluntary bat activities, including roost monitoring, bat care and handling. Katy has completed the Certificate of Bat Acoustics Analysis (CoBAA) and has achieved Technician Level with a Graded C Assessment Result.

1.5.3 Landscape Architect Rhodri Edwards has 25 years' experience of working on highways and infrastructure projects and has worked extensively on high profile schemes for Welsh Government. He is a native Welsh speaker with a farming background, who uses Welsh in meetings and consultation events. Rhodri is a proficient and Autodesk trained CAD user with design software packages of AutoCAD Civil 3D 2016, 3ds Max and TIN modelling. With a growing demand for visualisations, he has prepared Photomontages, 3d visualisations and drive/fly-through videos. He is also skilled in the use of Adobe Photoshop, GIS and assessment techniques including preliminary surveys using GPS for arboricultural and ecological surveys as well as technical drawings from survey data.

1.5.4 Bat surveyor assistance was provided by Dr Adam Lynch (RML).

2 LEGISLATION AND PLANNING POLICIES

2.1 Habitats and Species

2.1.1 Certain habitats and species are subject to protection as laid out in the Wildlife and Countryside Act (as amended)[2] and/or the Conservation of Habitat and Species Regulations 2017 (the 2017 Regulations) as amended[3] or by their own separate protection, for example, the Badgers Act 1991[4]. Wild birds are supported by Regulation 10 of the 2017 Regulations which require local authorities and others to take steps to contribute to the diversity and extent of habitat for wild birds.

2.1.2 For a summary of the offences under this legislation refer to **Appendix B**.

2.2 Environment (Wales) Act 2016[5]

2.2.1 Welsh legislation confirms Wales' legal commitment to biodiversity conservation. Section 6 of the Environment (Wales) Act 2016 introduced an "enhanced biodiversity and resilience of ecosystems duty (the S6 duty)" for public authorities, which requires that they "seek to maintain and enhance biodiversity so far as consistent with the proper exercise of their functions and in so doing promote the resilience of ecosystems".

2.3 Planning Policy Wales (PPW12) [6]

2.3.1 Planning Policy Wales 12 (PPW12) Section 6.4.3 sets out the responsibilities of the Local Planning Authority when assessing development proposals and their impacts on biodiversity. This document states:

'The planning system has a key role to play in helping to reverse the decline in biodiversity and increasing the resilience of ecosystems, at various scales, by ensuring appropriate mechanisms are in place to both protect against loss and to secure enhancement'.

2.3.2 It sets out the requirement for planning authorities to demonstrate that they have sought to fulfil the duties and requirements of Section 6 of the Environment Act 2016 by taking all reasonable steps to maintain and enhance biodiversity in the exercise of their functions.

2.3.3 Policies relevant to nature conservation included into Planning Policy Wales can be summarised as follows:

[2] https://www.legislation.gov.uk/ukpga/1981/69
[3] https://www.legislation.gov.uk/uksi/2017/1012/contents/made
[4] https://www.legislation.gov.uk/ukpga/1991/36/enacted
[5] https://www.legislation.gov.uk/anaw/2016/3/contents/enacted
[6] https://www.gov.wales/sites/default/files/publications/2024-02/planning-policy-wales-edition-12_1.pdf

- **Green Infrastructure**: to include the submission of proportionate green infrastructure statements with planning applications and signposting Building with Nature standards.
- **Net Benefit for Biodiversity and the Step-wise Approach**: The step-wise approach is the means of demonstrating the steps which have been taken towards securing a net benefit for biodiversity. In doing so, planning authorities must also take account of and promote the resilience of ecosystems, in particular the following attributes, known as the DECCA Framework[7].
- **Protection for Sites of Special Scientific Interest (SSSI's)**: strengthened approach to the protection of SSSIs.
- **Trees and Woodlands**: closer alignment with the stepwise approach, along with promoting new planting as part of development based on securing the right tree in the right place. Planning authorities must protect trees, hedgerows, groups of trees and areas of woodland where they have ecological value, contribute to the character or amenity of a particular locality, or perform a beneficial green infrastructure function.

[7] Ecosystem Resilience in a Nutshell 1: what is ecosystem resilience? (cyfoethnaturiol.cymru)

3 METHODOLOGY

3.1 Desk study

3.1.1 The North Wales Environmental Information Service (COFNOD) was contacted on the 22nd July 2023 to obtain the following ecological data:

- Details of any statutory and non-statutory nature conservation designations within 500 m of the site; and
- Details of any bat and roof nesting birds within 500 m.

3.1.2 A copy of the public records available from COFNOD is provided in **Appendix C**.

3.1.3 Open source 1:25,000 Ordnance Survey mapping and Google Earth Pro satellite imagery were used to identify any mapped water bodies and watercourses within 500 m of the Site.

3.2 Field Study

Extended phase 1 habitat survey

3.2.1 An Extended Phase 1 habitat survey was conducted on the 25th of July 2024 by Katy Morris and Rhodri Edwards of RML to determine the current baseline conditions of the site. The survey area included all land affected by the proposals and immediate adjacent land, where accessible. The weather conditions during the survey were, calm and dry with an ambient temperature of 20°C.

3.2.2 Habitats were described and mapped following the standard Phase 1 habitat survey methodology (JNCC, 2010). Phase 1 habitat survey is a standard technique for classifying and mapping British habitats. The dominant plant species were recorded, and habitats were classified according to their vegetation types. Where appropriate, consideration was given to whether habitats qualify, or could qualify, as a Habitats of Principal Importance following habitat descriptions published by the Joint Nature Conservation Committee (JNCC, 2008). The Phase 1 survey method is 'extended' through the additional recording of specific features indicating the presence, or likely presence of, protected species or other species of nature conservation significance (also referred to as 'notable' species).

3.2.3 The scientific naming of plant species follows those in Stace (2010). Habitats were marked on a paper base map and were subsequently digitised using a Geographical Information System (QGIS). Target notes (TN) were made to provide information on specific features of ecological interest or habitat features too small to be mapped. These are shown and described in **Appendix D.**

Protected Species Assessment

3.2.4 Any evidence, or potential for protected species and notable species were recorded and, where appropriate, marked as a target note on the Phase 1 habitat plan. The assessment of habitat suitability for protected and notable species was based on professional experience and judgement and supplemented by standard sources of guidance on habitat suitability assessment for key faunal groups. This modified approach to Phase 1 habitat survey is in accordance with the approach recommended by Guidelines for Preliminary Ecological Appraisal (CIEEM, 2017[8]).

Preliminary Roost Assessment

3.2.5 The Bat Survey Good Practise Guidelines (BCT, 2023[9]) were used as a basis to evaluate the buildings, trees, and surrounding habitat for its potential to support bats.

3.2.6 A detailed external and internal assessment of the property subject to the proposals was undertaken on the 25thJuly 2024. This involved checking for bats and any direct evidence of bats (e.g., droppings, staining, feeding remains etc). As well as identifying any potential access points into the structure which could be used by bats and the overall roost potential of the building.

3.2.7 The surveyors were equipped with a high-powered torch, close-focus binoculars, ladder, camera and endoscope.

Activity Surveys

3.2.8 One dusk / emergence survey with three surveyors present was conducted on: 1st August 2024.

3.2.9 The surveys started approximately 15 minutes before sunset and continued for 1 hour and 30 minutes. Surveyors were equipped with Anabat Walkabout or Scout detectors, to record bat call data for later analysis. During the survey any bat activity was noted by the surveyors, including species, the locations of any emerging bats, flight paths, general activity, commuting, foraging and the timings of these encounters.

3.2.10 For the surveys, surveyors were position as follows:

- Surveyor 1 was located with views of the south elevation, which included the roof and bell tower.

[8] https://cieem.net/wp-content/uploads/2018/01/Guidelines-for-Preliminary-Ecological-Appraisal-Jan2018-typo-edit.pdf

[9] https://cdn.bats.org.uk/uploads/pdf/Resources/For-professionals/Bat-Survey-Guidelines-4th-edition-AMENDED-27.03.24.pdf?v=1711530492&_gl=1*1mwmpke*_ga*NTM0NDY5Njg5LjE3MTQzODYyMzA.*_ga_G28378TB9V*MTcyMTczMzc1NC40My4xLjE3MjE3MzM3ODYuMC4wLjA.

- Surveyor 2 was located at the rear of the site with viewpoints of the north and east elevations of the building.
- Surveyor 3 was located to the west of the site with views along the western elevation. Which included the roof, bell tower and chimney.

3.2.11 Surveyor's locations are provided in **Appendix E**.

Static surveys

3.2.12 In addition to the activity surveys, automated monitoring survey was undertaken using a static bat detector (Anabat Swift) to record bat activity over continuous periods. This was deployed within loft space 3 as shown in **Photograph 1**, from 01/08/2024 to 06/08/2024.

3.2.13 The recordings from the statics were used to identify species of bat within the site and to measure levels of activity throughout the night. This method is often used to pick up hard to detect bat species such as brown long eared bats (*Plecotus auratus*), which have weak calls and are not always detected using handheld devices.

3.2.14 The detector was programmed and positioned by an ecologist with suitable training in static detector functionality and deployment.

Data analysis

Activity survey

3.2.15 Recordings made with the Walkabout and Scout detectors were later analysed in the office by a suitably trained/experienced ecologist using Anabat Insight software. The 'Batclassify species auto ID' plugin was set at 70% ID certainty threshold to identify species encountered; calls were then manually checked by a competent bat ecologist to ensure ID accuracy.

Static detector survey

3.2.16 After completion of the survey period, the detector was retrieved from the site, data was downloaded and then analysed using Anabat Insight and manually checked by a suitably experienced ecologist. The static detector data was used to assess the following:

- Species present within the site;
- Frequency of the bat activity; and
- Frequency of individual species activity.

Nesting bird checks

3.2.17 During the bat surveys and inspections, any evidence of nesting birds was noted and reported on.

3.3 Limitations

3.3.1 The surveys were undertaken at an optimal time of year and were unhampered by access restrictions. The results are therefore considered appropriately robust.

3.3.2 The light spillage from external lights on the site and from surrounding street lighting, obscured natural night vision of some of the surveyors, mainly to the south and west of the building. However, bat calls were registered on bat detectors and were analysed post survey.

3.3.3 No Night Vision Aids were used during the emergence survey due to safety concerns, having expensive equipment in the centre of a city. However, light from the streetlights, was sufficient to keep the roof visible to surveyors during the survey.

3.3.4 Records held by local ecological record centres, local recording groups are often collected on a voluntary basis; therefore, the absence of records does not demonstrate the absence of species, rather, it may simply indicate a gap in recording coverage.

4 RESULTS

4.1 Desk study

4.1.1 The following section summarises the results of the desk study and field surveys. A copy of the public records available from COFNOD is provided in **Appendix C**.

Statutory designated sites

4.1.2 There are no statutory designated sites within 1 km of the site.

4.1.3 There are no non-statutory designated sites within 1 km of the site.

4.1.4 There are no Wildlife Site located within 1 km of the site.

Habitats

4.1.5 The following habitat records were returned for the site (within the last 10 years) by COFNOD (JNCC alphanumeric codes in parentheses):

- Building (J3.6)

Protected and notable species

4.1.6 The following section presents the findings of the desk study (species records within 1 km of the site within the last 10 years) from COFNOD.

Amphibians and reptiles

4.1.7 There was one record of a common lizard (*Zootoca vivipara*) 665 m northwest of the site.

Badger

4.1.8 [redacted]

Bats

4.1.9 There were two records of bats recorded in the last 10 years within 1 km of the site:

- Noctule (*Nyctalus noctule*) 485 m northeast was detected during a survey flying around the building and playing fields.
- Lesser horseshoe (*Rhinolophus hipposideros*) 840 m was recorded from DNA samples.

Birds

4.1.10 No records for birds were returned for the site itself. There were 206 records of birds in the last 10 years and within 1 km of the site, of these records 12 were species of

notable species[10]. There were two records for the Invasive Non-Native species (INNS); ring-necked parakeet (*Psittacula krameria*). A full list of species from the Cofnod data is provided in **Appendix C**.

Hedgehogs

4.1.11 There were 22 records of hedgehogs (*Erinaceus europaeus*) within 1 km of the site within the last 10 years. The nearest record is 480 m north of the site. It was a live sighting in a residential garden.

Invertebrates

4.1.12 There were 16 records of invertebrates within 1 km of the site within the last 10 years. The nearest recorded invertebrate was a Holly Blue butterfly (*Celastrina argiolus*).

4.2 Field study

Habitats

4.2.1 The surveyed site area comprises The Old Library Building and the immediate surrounding land. (**Photographs 2 & 3, Appendix F**). The site is bounded by Queens Square to the south and west, the Guild Hall to the north. To the east is Llwyn Isaf and a car park.

4.2.2 The main habitats recorded within the surveyed site are described in the following paragraphs. The location and extent of habitats present and Target notes, are shown on **Figure 2** in (**Appendix D**). Photographs of key habitat features, where appropriate, are provided in (**Appendices F**).

Parkland scattered trees - Broad leaved (A3.1)

4.2.3 Broadleaved trees were noted to the south of the site, where there were three mature ornamental whitebeam (*Sorbus sp*), as well as Hazel (*Corylus avellana*) trees to the west (**Photograph 4 & 5**).

4.2.4 All the trees in the city centre are covered by a blanket Tree Preservation Order (TPO), AS confirmed by email from Emma Broad of Wrexham County Borough Council. None of the trees are listed on the Ancient Tree Inventory[11].

Parkland scattered trees - Coniferous (A3.2)

4.2.5 There were three mature yew trees (*Taxus baccata*) to the east of the site (**Photograph 6**), none of these are listed on the Ancient Tree Inventory but would be covered by the aforementioned TPO.

Tall ruderal (C3.1)

[10] Species with European and/or UK Legal Protection, Section 7 Species or UK BAP Priority Species

[11] https://ati.woodlandtrust.org.uk/

4.2.6 Tall ruderal species were confined to an area at the rear of the site. Typically associated with a disused area. Species included common nettle (*Urtica dioica*).

Wall (J2.5)

4.2.7 There were two brick walls to the north of the site, which were both in good condition. One of the walls was a smaller dwarf wall forming a flower bed (**Photograph 7**).

Building (J3.6)

4.2.8 The site is a two-storey Grade II listed building, with a graded slate roof, an ashlar lower storey and dressings, and is covered in Flemish-bond brickwork on the upper floor's exterior. The building used Cefn stone and Ruabon terracotta during its construction. The front roof was made of Westmorland slate, and the back roof with Bangor slate. The main part of the building is in the baroque style. The central bay contains a coat of arms with iron gates enclosing the porch.[12] (**Photograph 5**)

Other (J5) Hardstanding

4.2.9 The building has flagstone hardstanding to the north, south and east with flower beds **TN1, TN3** & **TN4** to the north, east and west (**Photograph 5**).

Problematic species

4.2.10 There is an area within the walled yard to the north of the site which contains Butterfly bush (*Buddleja sp)*. Buddleia is not a Schedule 9 species but is considered to be a problematic species, in particular if it is caused to spread into the wild.

4.3 Preliminary Roost Assessment

4.3.1 The site is a Grade II Listed building, built in the early 20th centuries as a library. The building is constructed from sandstone blocks with a slate tile roof.

4.3.2 The surrounding townscape consists of retail and commercial buildings, hardstanding with scattered parkland trees. Photographs of the exterior are provided in **Appendix F**.

4.3.3 **Table 1** contains the descriptions following the PRA.

[12] https://cadwpublic-api.azurewebsites.net/reports/listedbuilding/FullReport?lang=en&id=1852

Table 1 shows the description from the PRA

Floor	Photograph	Description	Bat Roost Potential
Basement		The basement is located in the northwest of the site, which is accessed down a steep staircase, the door is sealed with no gaps around the door frame. Windows within the basement are sealed with no gaps in the window frames. The walls are brick with a concrete floor. The basement is made up of four separate rooms, one of which has the plant for the boiler. **No evidence of bats recorded.**	Negligible potential
Ground Floor		The site was unoccupied at the time of survey. The interior consisted of offices, and kitchen. Examples of the rooms are provided in the photograph references in **Appendix F.** All the rooms on the ground floor were open and light, the windows and doors had no gaps around them, the glass was intact (Except for one window where one plane of the double glazing had been broken by a stone, there was still no entry point into the site). **No evidence of bats recorded.**	Negligible potential

Floor	Photograph	Description	Bat Roost Potential
First Floor		The interior first floor consisted of office spaces, and toilets. Examples of the rooms are provided in the photograph references in **Appendix F**. All the rooms on this floor were open and light, the windows and doors had no gaps around them. **No evidence of bats recorded.**	Negligible potential
Loft 1		Loft 1 was a traditional truss roof with rafters and purlins. The roof tiles were backed with a wooden boarding. There was insulation in between the floor joists. The roof void was completely dark, no evidence of light/gaps in the roofing material. No bat droppings found. **No evidence of bats recorded.**	Negligible potential

Floor	Photograph	Description	Bat Roost Potential
Loft 2		The second loft space was in the west of the building, with a traditional truss roof with rafters and purlins. The roof tiles were backed with wooden boarding, with a tarlike substance between them. There was insulation in between the floor joists. There was the top of a brick wall at one end of the loft and a brick chimney stack at the other end, which were both in good condition with no gaps/missing mortar. The roof void was completely dark, no evidence of light/gaps in the roofing material. No bat droppings found. **No evidence of bats recorded.**	Negligible potential

Floor	Photograph	Description	Bat Roost Potential
Loft 3		Loft 3 space was in the east of the building, with a traditional truss roof with rafters and purlins. There was a brick wall with steel girders. The roof tiles were backed with wooden boarding, with a tarlike substance between them. There was insulation in between the floor joists., which were both in good condition with no gaps in the mortar. This roof void was not completely dark, there were gaps above the steel and surrounding the door, which gives access onto the roof.	Low potential
Key Negligible potential = No obvious habitat features on site to be used by bats, but there is still an uncertainty that small unsuitable features on occasion would be used by bats[13]. Low potential = A structure with one or more potential roost sites that could be used by individual bats opportunistically but are unlikely to be used on a regular basis.			

[13] Table 4.1. https://cdn.bats.org.uk/uploads/pdf/Resources/For-professionals/Bat-Survey-Guidelines-4th-edition-AMENDED-27.03.24.pdf?v=1711530492&_gl=1*1rkgiak*_ga*OTIyMzU1NDEyLjE3MjI5NDgzMTY.*_ga_G28378TB9V*MTcyMjk0ODMxNS4xLjAuMTcyMjk0ODMxOC4wLjAuMA..

4.4 Bat activity survey

4.4.1 The weather variables during the surveys are provided in **Table 2.**

Table 2: The weather variables for the activity survey

Date	Time of sunset	Survey start / end times	Weather conditions at start/end
01/08/2024	21:05	Start: 20:55 End: 22:35	Start: 18°C, calm, 5 cloud cover, 78% rH, no precipitation, 25.4 lux End: 16°C, calm, 0 cloud cover, 84% rH, no precipitation, 0.0134 lux (at the west location) 2.6 Lux (at the southern and western survey locations.

4.4.2 **Table 3** below summarises the results from the activity surveys. The only species to be recorded was common pipistrelle (*Pipistrellus pipistrellus*).

4.4.3 During the activity survey, **no bats were seen to emerge from the site**, surveyor locations are shown in **Appendix E**.

Table 3 shows a summary of the survey results.

Date	Species Recorded	Description of Activity
01/08/2024	Ppip	A common pipistrelle was recorded by all three surveyors at 21:48, it was not seen to emerge from the building and only one pass was recorded. A second common pipistrelle was recorded by the surveyor to the east of the site at 22:26 (this area was considerably darker than the south and west elevations), this was not seen to emerge from the building. **No bats were seen to emerge.**
Key: Ppip = Common pipistrelle *Pispistrellus pipistrellus*		

4.5 Static detector survey

4.5.1 The static detector was deployed for five consecutive nights in the loft space 3. The location of the static detector is shown in **Appendix E.**

4.5.2 **No bats were recorded on the static detectors**.

Nesting birds

4.5.3 The site offers some potential for nesting birds. The trees in the immediate area were suitable for small garden birds. There was potentially a sea gull/ Herring gull (*Larus argentatus)* (**Photograph 14**) nesting on the roof. There were no signs of swallow/swift/house martin nests on the outside of the building at the time of survey.

5 POTENTIAL EFFECTS

5.1.1 The following section discusses the potential effects of the works, at the time of writing on the ecology interest at the site, and advises upon methods which can either avoid, mitigate, or compensate for these effects.

5.1.2 Potential effects which could arise from the refurbishment of the building include the following:

- Direct loss of and disturbance to habitats and species.
- Increased noise, disturbance, and risk of pollution during construction; and,
- Disturbance/propagation of problematic species.

5.2 Designated sites and non-statutory sites

5.2.1 There are no designated and non-statutory sites within 1 km of the site, therefore no direct or indirect effects to statutory designated sites may occur, due to their distance from the site and connectivity.

5.3 Habitats

5.3.1 The dominant habitats within the surveyed area are man-made and offer negligible biodiversity value. Therefore, there will be no negative effect by any of the proposed refurbishment works.

5.3.2 The scattered trees are understood to be retained; therefore, these habitats will not be lost.

5.3.3 The tall ruderal associated with the yard space at the rear of the site will be lost. The tall ruderal is of low diversity and are isolated by the surrounding walls, and buildings, reducing connectivity to the wider landscape, hence of low habitat value.

5.3.4 All of the semi-natural habitats on site lack overall sufficient size to provide enhanced benefits to wildlife.

5.3.5 In summary, the habitats on site provide very little in the way of biodiversity value as the site is predominantly man-made, hard standing and structures. No Section 7 habitats as listed under the Environment (Wales) Act 2016 would be lost.

5.4 Effects on Protected and notable species

Amphibians and reptiles

5.4.1 There is no suitable habitat on site, the site is predominantly manmade buildings and hard standing, there are no ponds within 500 m and no connecting habitats. No further recommendations.

Badger

5.4.2 No evidence of badgers was noted during any of the surveys on site. No further recommendations.

Bats

5.4.3 No bats have been identified roosting during the PRA, activity survey, and deployment / collection of the static bat detector. The results indicate that the probability of encountering bats is unlikely.

5.4.4 Overall, it is considered that the roof structure has low potential for crevice dwelling bats based on the potential for these species to roost under ridge and roof tiles and lead flashing, though these PRFs and the roof itself are unlikely to support a large number of bats.

Birds

5.4.5 No nesting birds were noted during the surveys, however, a young Herring gull was noted to be on the roof of the site. It was not known if there was a nest or if the young had recently fledged. This species is a Red list species on the Birds of Conservation Concern[14] due to ongoing population declines and wintering population declines and is protected under the Wildlife and Countryside Act.

5.4.6 The main impact on nesting birds would be from disturbance arising from the roofing works, if they were conducted within the nesting bird season (the herring gull nesting season spans from late March through September, with the most active nesting activities occurring in May and June dependent upon local climatic conditions).

5.4.7 All breeding birds are protected under the Wildlife and Countryside Act 1981 (as amended) which makes it an offence to intentionally take, damage or destroy a wild bird's nest while it is being used; or built; or intentionally take/destroy a wild bird's egg.

Hedgehogs

5.4.8 No evidence of hedgehogs was noted during any of the surveys on site. No further recommendations.

Invertebrates

5.4.9 The area of vegetation (Flower beds) to be affected by the proposal is of low biodiversity value. Consequently, there is no significant effect on invertebrates. No further recommendations.

[14] https://www.bto.org/sites/default/files/publications/bocc-5-a5-4pp-single-pages.pdf

Non-native invasive/problematic species.

5.4.10 There is one area of the problematic species Buddleia on the east boundary of the rear yard, this species is not a Schedule 9 species, however it is considered a problematic species **TN2**. The proposed plans will require the removal of the buddleia plants to make way for the new extension. It will be necessary to ensure that this species is not allowed to spread off site during the clearance, and construction of the new extension by any means.

5.5 Priority and notable species

5.5.1 **Table 6** lists the species with known presence or potential to be present on the site which are Priority Species listed on Section 7 of the Environment (Wales) Act 2016 or are considered notable and relevant to the site in question.

Table 6: *Summary of Priority Species*

Species group	Species	Site Context
Birds	Environment Wales Act (2016) S 7 list 51 species of bird of which at least one was noted on site.	The trees could provide suitable nesting and foraging habitat for birds. Herring gulls were recorded on site with young present, which are a red listed species.
Mammals	Bats	Some habitat for commuting bats (less light sensitive species i.e. pipistrelle sp) the site and surrounding areas are subject to illumination from external light sources. The existing trees provide limited foraging and commuting corridors. Low roost potential, no evidence of roosting bats noted during the surveys.

6 RECOMMENDATIONS

6.1 Habitats

6.1.1 The proposals should aim to include landscape planting which contains a more diverse native flora including species of local provenance and/or those which are a benefit to pollinating insects.

6.2 Protected species

Bats

6.2.1 It is advised that no further emergence surveys are required and that there are no timing restrictions to the works[15]. However, as a precaution, it is recommended that prior to the removal of the roofing materials an inspection by a bat licensed ecologist is carried out. If a bat is discovered, at any time during the works, the following procedure would be followed:

- Works in that area would stop immediately.
- Unless it is in immediate danger, the bat must only be handled by the NRW licenced bat surveyor with handling endorsement.
- The ecologist would re-assess the location where the bat was found and determine whether works can continue, and the precautions to take.

6.2.2 The bat/s would be retained by the bat licenced ecologist and released at dusk, at the same location. The capture and handling of any bats will only be undertaken **by licensed bat workers**. Injured bats will immediately be taken into care (as directed by The Bat Workers Manual, s7.3, pp. 64-66, 3rd Edition, 2004).

6.2.3 Whether bats are found roosting or not, consideration should be given to the installation of bat access tiles on the roof of the Old Library structure with a suitable aspect (ideally a south-east or south-west aspect and where aspects are not subject to lighting and are close to connecting habitat) to enhance and achieve biodiversity objectives, examples of bat mitigation are shown in **Appendix G**.

[15] If demolition works are delayed for more than a year from the date of these surveys (August 2024) then further emergence surveys and inspections are advised, please refer to the CIEEM Advice Note on the Lifespan of Ecological reports and Surveys which can be found here: https://cieem.net/wp-content/uploads/2019/04/Advice-Note.pdf

6.2.4 Only approved products/application methods should be used for remedial timber treatment (this should also be checked for new treated timbers)[16] as specified in the Bat Mitigation Guidelines (2023).

6.2.5 Consideration should be given to the type of roofing material used, Non-bitumen-coated roofing membranes (formerly known as breathable roofing membranes, modern roofing membranes, BRMs or MRMs) should **not** be installed as bats can become entangled in the fibres.

Birds

6.2.6 Refurbishment of the roof, which could support nesting birds (for example herring gulls) should be undertaken outside the bird breeding season. It is advised that if works are programmed to start at a time which conflicts with this, a suitably experienced ecologist will need to conduct a nesting bird check immediately before any materials are removed. If nesting birds are present, in particular gulls, then a licence would be required to remove/disturb the nest and consultation with Natural Resources Wales and the LPA would be required.

6.2.7 Consideration should be given to the installation of bird boxes on the exterior of the building (if this is possible considering the listed status of the structure) or on the mature Yew trees. Sparrow nest boxes could be placed on the northern and eastern sides of building or trees. Example bird boxes are provided in **Appendix H**.

[16] https://www.gov.uk/guidance/bat-roosts-use-of-chemical-pest-control-products-and-timber-treatments-in-or-near-them. Note that much of this information is based on old research, and there is a growing interest in eco-toxicology and bats; this is the most up to date information available at the time of writing the report.

7 Conclusion

7.1.1 This report presents the findings of the Preliminary Ecological Assessment, Preliminary Roost Assessment and bat activity survey, and provides an assessment of the potential effects on ecological features which may result from the proposed works.

7.1.2 No Priority habitats would be disturbed/lost. No statutory designated sites occur on or within 1 km of the site.

7.1.3 There is an area of problematic species buddleia, which must **not** be caused to spread by the works. If disturbed, a precautionary working method statement (PWMS) by an approved contractor should be written, to include a biosecurity risk assessment, control, eradication, and management of this species. This should be written in consultation with the landowner/occupier.

7.1.4 The site has little value for protected or notable species, and none were recorded on site with the exception of herring gulls (a species of conservation concern). Reasonable Avoidance Measures (RAM's), which include pre works site surveys have been advised.

7.1.5 It is recommended that no further emergence surveys for bats are required unless refurbishment is delayed for more than one year from the date of the last emergence survey conducted to inform this report (1st August 2024). If bats are found roosting within the structure, during the recommended pre-deroofing checks, then Reasonable Avoidance Measures have been advised.

7.1.6 Biodiversity enhancements including the provision of native planting in landscape proposals, provisions for bats, nesting birds and the removal or control of problematic plants have been advised.

7.1.7 The details in this report will remain valid for a period of up to two years (one year for information regarding bats) from the date of this report (August 2024) after which if no site works have commenced, the validity of this assessment should be reviewed to determine whether further updates are necessary.

APPENDIX B: Relevant Protected Species Legislation

The following has been produced as a guide, to outline possible offences that could occur during the scheme. For a definitive list of all species of flora and fauna, and a full interpretation you should refer to relevant Acts listed below.

Conservation of Habitats and Species Regulations 2017 (as amended)

Schedule 2 applies to all European Protected Species (EPS) which includes all bat species, otters, great crested newts, dormice, otters, sand lizards, smooth snake and natterjack toad amongst others. The protection afforded is overlapping but separate from the Wildlife and Countryside Act 1981 (as amended).

It is an offence:

- to deliberately capture, injure or kill
- to deliberately disturb
- to damage or destroy a breeding site or resting place of an EPS; this applies whether species are present or not.

The Wildlife and Countryside Act 1981 (as amended)

Applies to all wild birds where it is an offence:

- to kill, injure or take any wild bird (subject to certain exceptions)
- to take, damage or destroy a nest whilst it is in use or being built
- to take or destroy the egg of any wild bird

Schedule 1

It is also an offence to disturb any wild bird listed on Schedule 1 of the Wildlife & Countryside Act 1981 (as amended)

- while it is nest building
- at a nest containing eggs or young
- disturbs the dependant young of any such bird.

Schedule 5

For animals fully protected under Schedule 5 which includes all bats, great crested newts, otters, water voles, sand lizards, smooth snake and natterjack toad, it is an offence:

- to intentionally kill or injure or take
- to intentionally damage or destroy or obstruct access to any structure or place which a species uses for shelter or protection, at any time even if the animal is not there
- to intentionally disturb whilst it is occupying a place which it uses for shelter or protection
- to obstruct access to any structure or place which an animal uses for shelter or protection

Adder, grass snake, common lizard and slow worm are only protected from being killed or injured and the white- clawed crayfish is only protected from being taken.

Schedule 9

Invasive non-native species are listed under Schedule 9. It is an offence:

- to plant or otherwise cause to grow in the wild any species listed on Schedule 9.

In addition, The Invasive Alien Species (Enforcement & Permitting Order took effect on the 1st December 2019. It introduces enforcement provisions, offences and penalties needed to comply with the requirements of EU Regulation (1143/2014) on the prevention and management of the introduction and spread of invasive alien species. The provisions apply to 66 species known as 'species of Union concern'. Under the Order, NRW and the police may impose criminal sanctions in Wales relating to an offence under the Order. As the regulator, NRW may also impose civil sanctions.

Licences may be issued under the Order allowing activities which are prohibited under the EU Regulation to be carried out. These activities can only be carried out in compliance with the conditions of a licence. Natural Resources Wales are the licensing body in Wales.

Important Information

- Use of the data is governed by Cofnod's Terms & Conditions.
- Data marked as confidential or sensitive must not be released into the public domain, with the exception of the Public Version of the PDF report, which has had sensitive information removed or restricted.
- You should not amend any part of the downloaded records.
- Unless otherwise agreed, use of the data is valid until the Expiry Date (22/01/2025).
- Past records of presence of a habitat or species do not guarantee continued occurrence; absence of records does not imply absence of a species, merely that no records are held by Cofnod; Cofnod cannot guarantee the accuracy of supplied data; copyright of records remains with the original recorder.
- The Dataset ID associated with each record can be used to find information about the provenance of the data. See the Cofnod Metadata page for more information.
- Verification Levels are given for each record and indicate whether the record has been assessed by an expert.
- Please contact us if you have any questions about using the data or wish to add further Data Users.

Notes

- Records with 1km, 2km, 5km, 10km or 100km grid references (where present) are highlighted with, for example, (1km) next to the distance to indicate that the distance

should not be considered to be exact given the vague nature of the grid reference.

• Records shown in **bold** typeface are sensitive species records, and some details have been restricted in this public version of the report.

Verification Levels

- **UA:** Unassessed
- **PC:** Probably Correct
- **KC:** Known Correct
- **NA:** Not Required

Species Categories

- **All Other Species:** Any species not included in other categories
- **Category 1 Species:** Species with European and/or UK Legal Protection, Section 7 Species or UK BAP Priority Species
- **Category 2 Species:** Global Red List, British Red Data Book, Nationally Rare & Scarce, Welsh Red and Amber Birds & Welsh Red Data Lists, not identified in Category 1
- **Category 3 Species:** Local species not identified under Categories 1 & 2, Locally Important species as specified by local experts

- PUBLIC VERSION -

Data Description

Distance	Indicates the distance, in metres, between the grid reference of the record (using the central point of the grid square) and the search location. For any Sensitive Species Records, this should not be released into the Public Domain.
Species Name	Name of the taxon (usually identified to species level) using the binomial system.
Grid Reference	Grid reference based on the Ordnance Survey grid system.
Date	Date on which the record was made. In some cases this might be a date range, or a vague date such as 'Summer 2010'.
Recorder(s)	One or more people who made the original observation and recorded it in some way. It may have subsequently been included in a data collation by another person or it may have been submitted to the LERC directly.
Abundance	Number of individuals recorded. Where not specified it is assumed that at least one was present.
Record Type	A description of the type of record.
Site Name	The site name (if one has been supplied). For any Sensitive Species Records, this cannot be released into the Public Domain.
Notes	Any additional notes about the sighting. For any Sensitive Species Records, this cannot be released into the Public Domain.
Dataset ID	ID of this dataset. See 'Important Issues' for more details.
Lists	Any local, national or international conservation statuses or legal protection which apply to this species and whether it is included in any Local Biodiversity Action Plans. See 'Abbreviations' for more details.
V	An indicator showing the level of confidence held in the record's correct identification.
