Bat & Bird Box Positioning

BAT BOXES (Vivara Pro Beaumaris Maxi Woodstone Type) are to be located facing a south-westerly orientation at least 4m above ground level.

BIRD NEST BOXES (Woodstone House Sparrow Type) are to be facing a north-easterly orientation and positioned 1600mm above ground level when located on garden walls and as high as possible on walls of buildings.

FOR FURTHER DETAILS OF BAT BOXES AND BIRD NEST BOXES PLEASE REFER TO SEPERATE DATA SHEETS.

Hedge Planting

Box hedge (Boxus Sempervirens).

Plants should be supplied in accordance with the Horticultural Trade Association's National Plant specification and be sourced from a nursery that is a Member of the Horticultural Trades Association Nursery Certification Scheme.
Plant in trenches large enough to take full spread of roots (200mm depth x 400mm width). Back fill with a previously prepared mixture of topsoil excavated from the pit, together with suitable compost and additional topsoil as required.
Plant in a double staggered row approximately 300mcm apart.
Set out plants evenly using the plan below as a guide, 6 plants per metre run.
The base of the hedge should be mulched with a 50-75mm layer of composted bark to stop weed growth and retain moisture in the soil.
Where necessary, protect plants from damage and grazing by using protective tubes or spiral guards

Hedge Maintenance

Water the hedge for the first summer or any dry period in the first 12 months.
Maintain weed control for at least 2 seasons.
Replace any stock that dies within the first year.
To encourage wildlife, trim the hedge no more than every second year.
Never trim the hedge between the beginning of March and the end of August when it would be harmful to invertebrates and nesting birds.
The ideal time to trim the hedge is between January and February.
