This document has been prepared by Sutcliffe Investigations within the terms of the Contract with the Client to whom this document is addressed. Sutcliffe Investigations disclaims any responsibility to the Client and others in respect of matters outside the scope of the said contract. No person other than the Client shall rely on it in any respect and Sutcliffe Investigations shall owe no duty of care to any such third party.

Executive Summary

Introduction	Sutcliffe Investigations were instructed by FI Real Estate Management to undertake a Phase I Preliminary Risk Assessment (PRA) of the site known as The Bridgeway Centre, Bridge Road, Wrexham LL13 9QS.
Aims & Objectives	The Phase 1 PRA is required to assess the ground based environmental and geotechnical risks, development constraints and liabilities associated with the development of the site, required in support of an application for outline planning. This report constitutes a preliminary investigation as defined in BS10175 and contains the following: • Summary of the information obtained from an Envirocheck Report (<i>Report Reference: 130074387-1-1</i>). • A preliminary risk assessment of potential environmental risks associated with the proposed redevelopment of the site to identified receptors, following the methodology of CLR11 and their recommendations on contamination reports.
Development Plans	The proposed development for the site is for demolition of the current commercial / industrial units for the purpose of creating a new units to potentially include the following; • Petrol filling station • 24hr mini super market • A number of retail/food outlets i.e. Greggs, Subway • Drive through Starbucks or Costa • Potential serviced office complex • Pub • Hotel • Range of specialist food manufacturing units ranging from 2,000-3,000sq.ft • Small start units ranging from 700sq.ft to 2,500sq.ft • Possible a few 5,000sq.ft units • HGV park The proposed development is presented as <i>Drawing No: 14946 SK01</i> produced by The Harris Partnership Architects.
Site Location & Description	The site address is located at The Bridgeway Centre, Bridge Road, Wrexham LL13 9QS at National Grid Reference (NGR) 337770, 349400. The site is irregular in shape, approximately 4.54Ha in size and can be accessed via Bridge Road to the east of the site. The site comprises of commercial units some of which are occupied and others disused. Grass verges are noted around the periphery of the site and occasionally between industrial units.
Site History	Onsite - The earliest available historical map (1873) indicated that the site was undeveloped and consisted of field land with a pond noted on the north western portion of the site, it is also plausible that Redwither Brook might have impinged onto the site. No further changes were evident on site until 1954 when a number of units were noted. Given the configuration and type of buildings noted on site it is likely that the development site formed part of Wrexham Royal Ordnance Factory (ROF) which during its operational period manufactured cordite an explosive propellant for shells. (Research would indicate that this manufacturing process commenced at the start of WWII). Given that no earthwork embankments were noted on the development site, it is considered

	likely that the buildings were utilised for administration and / or laboratory type activities and not production. By 1961 a works, a hydrant and a sub-station were noted on site, and by 1986 The Bridgewater Centre and an additional sub-station were noted. No further changes were evident on later maps. <i>NOTE: Online research could not confirm whether Wrexham ROF was subject to WWII aerial bombings, and therefore further consideration will need to be given to this potential risk.</i> With the exception of made ground potentially being present on site and under the slab, together with potential for TPH contamination from heavy good vehicles, no significant identifiable sources of environmental concern were identified, however the site is used for a variety of uses some of which are industrial and are still operating on the site. The potential for significant contamination to have arisen at the site as a result of the current and former usage on site is considered to be low to medium. Therefore, the possibility of contamination albeit likely to be localised cannot be discounted. Offsite - The earliest historical map dated 1873 indicated that the surrounding area of the site was largely field land dotted with ponds. Redwither Brook, was noted immediately north and west of the site and by 1879, the River Clywedog was noted approximately 620m south east of the site A smithy was not approximately 200m south east of the site by 1899 and a tank was noted approximately 65m south west of the site between 1911 and 1912. No further changes were noted until 1954 when the surrounding areas in all directions of the site became increasingly built up with buildings thought to be industrial units as part of the Wrexham Trading Estate and Wrexham ROF. Also at this time, a small number of residential properties were also noted to the south of the site. Between 1961 to present day, the surrounding area was mainly developed with industrial type uses including factories, hydrants, brick works, works, sub stations and farmhouses. The most recent development noted was Wrexham prison approximately 80m south east of the site.
Geology	Artificial - The site is noted to be artificially modified ground. Drift - The superficial deposits for the site are noted as Devensian Till. Solid - The solid geology for the site is noted as being Salop Formation – Mudstone, Sandstone and Conglomerate.
Hydrogeology	The Bedrock is classified as a Secondary A Aquifer with the Superficial Deposits classified as Unproductive Strata.
Radon	According to the Envirocheck Report, the property is in an intermediate probability radon area (5 to 10% of homes are estimated to be at or above the Action Level). Basic radon protective measures are necessary in the construction of new dwellings or extensions.
Coal Mining	The site does fall within a coal mining area. Based on the Coal Mining Report (Report Reference 51001490083001) the following is of note: • The site is not within the zone of likely physical influence from past present or future underground coal mining. • There are no known coal mining entries on or within 20m of the site. • The site is not aware of any evidence of damage arising due to geological faults or other lines of weakness that have been affected by coal mining. • The property is not within the boundary of an opencast site from which coal has been removed by opencast methods in the past, present or future. • There is no record of mine gas emissions requiring action by the Coal

	Authority.
Hydrology	The nearest surface water feature is noted on site, this is thought to be a drain. There are no surface or ground water abstractions within 250m of the site.
Flood Risk	According to the Envirocheck Report the site is within 250m of an area at risk from extreme flooding from rivers or sea without defences.
Risk Assessment	The Phase I PRA has not highlighted any significant areas of concern, however the site has been and still is used for industrial purposes, therefore, the site is deemed to be Class 2 – Medium Risk.
Conclusions & Recommendations	Based on the findings of the Phase I PRA review, Sutcliffe Investigations do not consider there to be any identifiable significant environmental issues regarding the site, however without an investigation of the site this cannot be discounted as the site has previously and currently been used for varied industrial purposes, There is limited information of the ground for geotechnical properties and as such we would therefore recommend the following sequential works are undertaken: • Commission an Initial UXO Desk Based Assessment. If this confirms a medium to high risk from UXO then a Detailed UXO Desk Based Assessment will be required. • Submission of this Phase I PRA Report for the benefit of validating the outline planning application. • Commission a Phase II Ground Investigation designed to discharge any contaminated land conditions that may be assigned to the site and allow the design of economic foundation solutions. • Commission a Flood Risk Assessment.

1 Introduction

1.1 Terms of Reference

Sutcliffe Investigations were instructed by FI Real Estate Management to undertake a Phase I Preliminary Risk Assessment (PRA) of the site known as The Bridgeway Centre, Bridge Road, Wrexham LL13 9QS (*Figure 1*).

1.2 Proposed Development

The proposed development for the site is for demolition of the current commercial / industrial units for the purpose of creating a new units to potentially include the following;

- Petrol filling station
- 24hr mini super market
- A number of retail/food outlets i.e. Greggs, Subway
- Drive through Starbucks or Costa
- Potential serviced office complex
- Pub
- Hotel
- Range of specialist food manufacturing units ranging from 2,000-3,000sq.ft
- Small start units ranging from 700sq.ft to 2,500sq.ft
- Possible a few 5,000sq.ft units
- HGV park

The proposed development is presented as *Drawing No: 14946 SK01* produced by The Harris Partnership Architects.

1.3 Legislative Context

The presence of contaminants which may pose a risk to human health and / or the environment is a planning consideration. As part of the planning regime it needs to be considered whether the site is “*suitable for its proposed end use*”. Planning is concerned with the site’s proposed end use, not its current use, where the amount of contamination is required to be low relative to the level of risk.

Section 57 of the Environment Act 1995, adds Part 2A (ss. 78A to 18YC) to the Environmental Protection Act 1990 and contains the legislative framework for identifying and dealing with contaminated land. Where development is undertaken on land which may be affected by contamination, the National Planning Policy

Framework, paragraphs 120 to 122 considers pollution and remediation. This links the contaminated land regime within the development process.

For there to be a significant risk requiring further investigation a perceived source (contaminant), a receptor (humans, living organisms or property) and a pathway between them must all be present, resulting in a complete contaminant linkage.

In order to assess whether this is the case, background research is required to obtain relevant information about the site and its surroundings and to assess the findings qualitatively. The scope of the assessment examined whether there is the potential for current and historic soil and/or groundwater contamination to be present, both at and in the vicinity of the site, and to assess significance in terms of the potential to pose a risk to human health, controlled waters, building infrastructure and the wider environment and identify any associated potential liabilities.

Part 2A of the Environmental Protection Act 1990 ("Part 2A") provides the legislative framework for the contaminated land regime in England, Wales and Scotland. It provides for contaminated land to be identified and dealt with in a risk-based manner. The *Contaminated Land (England) Regulations 2006* (SI 2006/1380) set out provisions for procedural matters under Part 2A. The 2006 regulations have recently been modified with the introduction of *The Contaminated Land (England) (Amendment) Regulations 2012*, which came into force on 6th April 2012. This includes an amendment to Regulation 3(c) to take account of the updated definition of "controlled waters" in Section 78A(9) of the *Environmental Protection Act 1990*. Section 78A(2) of Part 2A of the EPA 1990 defines contaminated land as "land which appears to the local authority in whose area it is situated to be in such a condition, by reason of substances in, on or under the land, that:

- significant harm is being caused or there is a significant possibility of such harm being caused; or
- pollution of controlled waters is being, or is likely to be caused".

Contaminated Land Statutory Guidance published in April 2012 provides for a new four category test which is intended to clarify when land does or does not need to be remediated, where Category 1 is deemed as being high risk and Category 4 as being low risk.

1.4 Previous Studies

Sutcliffe's are not aware any previous environmental or geotechnical investigations having been completed on site.

1.5 Objectives & Scope of Works

The Phase 1 PRA is required to assess the ground based environmental and geotechnical risks, development constraints and liabilities associated with the development of the site, required in support of an application for outline planning.

This report will inform the study of any potential contaminated land issues to be identified, assessed and actioned and has been designed to provide sufficient information to satisfy the requirements of National Planning Policy Framework (NPPF) in order to satisfy the aims and objectives of the project.

The report will culminate in the presentation of a Preliminary Conceptual Site Model (CSM) and will include clear robust recommendations for any additional works. These works will be designed to fully assess and mitigate risks, development constraints and abnormalities that may be required in support of a detailed planning application and design of detailed foundation options.

This report constitutes a preliminary investigation as defined in BS10175 and contains the following:

- Summary of the information obtained from an Envirocheck Report (*Report Reference: 130074387-01-01*), which is presented in *Appendix A*.
- A preliminary risk assessment of potential environmental risks associated with the proposed redevelopment of the site to identified receptors, following the methodology of CLR11 and their recommendations on contamination reports, i.e.:
 - *Department for Environment, Food and Rural Affairs and the Environment Agency, 2002. "Model procedures for the management of land contamination" (CLR11).*
 - *Environment Agency, March 2011, "Model Procedures for the Management of Land Contamination – GPLC3 – reporting Checklists".*
- Recommendations for further investigation/actions if required.

The scope of works was to undertake a Phase I PRA using available information, and to place the site in its environmental context and has included the following:

- a review of available historic maps to determine the land-use history in the context of potentially contaminative activities;
- a review of environmental data relating to the site and its surroundings using a proprietary third-party environmental database;

- desk-based assessment of site geology, hydrogeology and hydrology from published mapping and web-based sources to determine the site's environmental setting and sensitivity;
- a web-based search of the Environment Agency (EA) website and other freely available sources of information to identify any potential issues relating to the site and surrounding areas; and
- provision of a qualitative contaminated land risk assessment based on Source-Pathway-Receptor as per current best practice contained in CLR11¹.

A site inspection was undertaken by a Sutcliffe engineer – Richard Morris, on the 25th May 2017. No sampling or testing of soils or waters was undertaken as part of this environmental review. All other information in this report has been obtained via public sources.

¹ *Model Procedures for the Management of Contaminated Land*, Contaminated Land Report 11 (CLR11), EA, September 2004

2 Environmental Review

2.1 Introduction

The information presented within this chapter was compiled based on a site inspection, completed by a suitably qualified Sutcliffe Engineer, and a review of an Envirocheck Report (*Report Reference 130074387-01-01*), presented in *Appendix A*.

2.2 Site Location and Setting

The site address is located at The Bridgeway Centre, Bridge Road, Wrexham LL13 9QS at National Grid Reference (NGR) 337770, 349400 (*Figure 1*).

The site is approximately 3.6 miles east of Wrexham Town Centre and is surrounded by industrial units, with Wrexham Industrial Estate to the north. Beyond the Industrial units the land is predominantly open space. Location plans of varying scales are presented as *Figures 1 & 2* and an Aerial Photograph is presented as *Figure 3*.

Figure 1: General Location of Site

2.3 Site Description and Walkover

The site is irregular in shape, approximately 4.54Ha in size and can be accessed via Bridge Road to the east of the site. The site comprises numerous single storey commercial units some of which are occupied and others disused. Grass verges are noted around the periphery of the site and occasionally between industrial units. A photographic log of the site is presented as *Appendix B*.

Figure 2: General Site Layout of the Site

Figure 3: Aerial Photograph

2.4 Adjacent Land Uses

Table 2.1 summarises the adjacent land uses.

Table 2.1: Adjacent Land Uses

Direction	Adjacent Land Use
North	Wrexham Industrial Estate
East	Industrial Units / Open Land
South	Industrial Units / Open Land / Housing
West	Industrial Units

2.5 Services

Electric

Low and high voltage mains are noted on site. Low and high voltage mains along with a 132kv main are noted along Bridge Road on the north eastern / south eastern border of the site.

Gas

Low pressure gas mains are noted to run though the site.

United Utilities

Currently awaiting service plans.

When received service plans will be presented in *Appendix C*.

Other

A mast, presumably for telecommunications is positioned on the site.

2.6 Site History

Historical maps were obtained and reviewed by Sutcliffe Investigations to determine the historical development of the target site. These are presented in *Appendix A*. This enabled an assessment to be made of the potential for contamination associated with former activities, both on-site and in the surrounding areas.

Onsite

The earliest available historical map (1873) indicated that the site was undeveloped and consisted of field land with a pond noted on the north western portion of the site, it is also plausible that Redwither Brook might have impinged onto the site.

No further changes were evident on site until 1954 when a number of units were noted. Given the configuration and type of buildings noted on site it is likely that the development site formed part of Wrexham Royal Ordnance Factory (ROF) which during its operational period manufactured cordite an explosive propellant for shells. (Research would indicate that this manufacturing process commenced at the start of WWII). Given that no earthwork embankments were noted on the development site, it is considered likely that the buildings were utilised for administration and / or laboratory type activities and not production.

By 1961 a works, a hydrant and a sub-station were noted on site, and by 1986 The Bridgewater Centre and an additional sub-station were noted. No further changes were evident on later maps.

NOTE: Online research could not confirm whether Wrexham ROF was subject to WWII aerial bombings, and therefore further consideration will need to be given to this potential risk.

With the exception of made ground potentially being present on site and under the slab, together with potential for TPH contamination from heavy good vehicles, no significant identifiable sources of environmental concern were identified. However the site is used for a variety of uses some of which are industrial and are still operating on the site. The potential for significant contamination to have arisen at the site as a result of the current and former usage on site is considered to be low to medium. Therefore, the possibility of contamination albeit likely to be localised cannot be discounted.

A detailed review of the historical development of the site is presented in *Appendix D*.

Offsite

The earliest historical map dated 1873 indicated that the surrounding area of the site was largely field land dotted with ponds. Redwither Brook, was noted immediately north and west of the site and by 1879, the River Clywedog was noted approximately 620m south east of the site

A smithy was not approximately 200m south east of the site by 1899 and a tank was noted approximately 65m south west of the site between 1911 and 1912.

No further changes were noted until 1954 when the surrounding areas in all directions of the site became increasingly built up with buildings thought to be industrial units as part of the Wrexham Trading Estate and Wrexham ROF. Also at this time, a small number of residential properties were also noted to the south of the site.

Between 1961 to present day, the surrounding area was mainly developed with industrial type uses including factories, hydrants, brick works, works, sub stations and farmhouses.

The most recent development noted was Wrexham prison approximately 80m south east of the site.

A detailed review of the historical development of the surrounding land uses is presented in *Appendix D*.

2.7 Environmental Database

A commercial database search (provided by Envirocheck) was obtained to provide further information regarding the site and the surroundings. Relevant information and records are summarised below:

Contaminated Land Entries

The database has no contaminated land entries within 500m of the site.

Environmental Permitted Activities

According to the database there is one current Local Authority Integrated Pollution Prevention and Control within 500m of the site and is noted to be Ball Packaging Europe Ltd noted 172m north east of the site.

Seven Local Authority Pollution Prevention and Controls have been noted within 500m of the site the closest of which is noted on site and relates to Williams Service & Steve Williams Transport.

Hazardous Substances Sites

According to the database, there are no COMAH-registered sites, Planning Hazardous Substances Consents or NIHHS sites within 500m of the site.

Substantiated Pollution Incident Register

According to the database, there have been seven substantiated pollution incidents within 500m of the site. The nearest of which is noted as being 98m north of the site, and was recorded on the 8th August 2002, with significant impact to water (Category 2) no impact (Category 4) to air and minor impact (Category 3) for land. The pollutant was noted as being crude sewage.

Landfill Sites

According to the Envirocheck Report there are;

- One Registered former Landfill site has been noted within 500m of the site. This landfill is noted to be 263m north east of the site, the license holder is noted as British Celanese and the status is lapsed / cancelled / defunct / not applicable / surrendered / cancelled.
- One Historic Landfill site was noted within 250m of the site, the landfill was noted 227m north east of the site and the specified waste was for deposited waste, industrial waste and sludge.
- No BGS Recorded Landfill Sites were noted within 500m of site.

Infilled Land

An area of potentially infilled land (water) was noted on site based on maps from 1938 and refers to unknown filled ground. Eleven additional areas of potentially infilled land (water) were noted within 250m of the site.

No areas of potentially infilled ground (non-water) have been noted within 250m of the site.

Waste Management Facilities

The database has recorded one Registered Waste Transfer Site within 250m of the site. This relates to Reynolds Services – North Western 226m east of the site.

No registered waste treatment or disposal sites are noted within 250m of the site.

The database has recorded one Licensed Waste Management Facility within 250m of the site this relates to Unit 1 on the Wrexham Industrial Estate recorded at 216m east of the site.

Radioactive Materials

According to the Envirocheck Report there are no authorisations for radioactive substances within 500m of the site.

Fuel Stations

According to the database there are no petrol or fuel station entries within 500m of the site.

Contemporary Industrial Land Uses

According to the database there are twenty three entries located on site, a further twenty nine within 250m of the site and thirty four between 251-500m of the site. The on-site entries relate to the Units at Bridgeway Centre, Wrexham Industrial Estate.

Underground Pipelines and Transmission Assets

A search of the Linesearch database was undertaken on 4th July 2017. This database lists pipelines owned and/or operated by over 40 pipeline and transmission operators, but not all operators are registered.

According to the database, there are no underground pipelines or transmission assets on the site or within a 25m search radius (*Appendix C*).

2.8 Historical Contamination Potential

Site

The earliest available historical map (1873) indicated that the site was undeveloped and consisted of field land with a pond noted on the north western portion of the site. No further changes were evident on site until 1954 when a number of units were noted thought to be associated with Wrexham ROF. By 1961 a works, a

hydrant and a sub-station were noted on site, and by 1986 The Bridgewater Centre and an additional sub-station were noted. No further changes were evident on later maps.

With the exception of made ground potentially being present on site and under the slab, together with potential for TPH contamination from heavy good vehicles, no significant identifiable sources of environmental concern were identified, however the site is used for a variety of uses some of which are industrial and are still operating on the site. The potential for significant contamination to have arisen at the site as a result of the current and former usage on site is considered to be low to medium. Therefore, the possibility of contamination albeit likely to be localised cannot be discounted.

Surrounding Area

The surrounding area is largely industrial with Wrexham ROF also previously noted therefore potentially contaminative activities were identified as having taken place in the immediate surrounding area.

Therefore, the potential for off-site sources of contamination to impact the site is considered low to medium.

3 Environmental Setting

3.1 Introduction

Desk-based research of the local geology, hydrogeology, hydrology and ecology was carried out in order to establish the potential for migration of contamination onto or away from the site, and to assess the surface water and groundwater sensitivity of the surrounding area. Information was obtained from a number of sources, namely:

- *inspection of the British Geological Survey (BGS) Geology of Britain Viewer²;*
- *examination of the EA's on-line aquifer classification³;*
- *inspection of the MAGIC interactive map service⁴;*
- *a review of online web-based information searches;*
- *review of previous site investigation reports pertaining to the site; and*
- *a review of publicly available information.*

3.2 Geology & Soils

Soils Chemistry – Rural

The environmental database also presents an estimation of the rural background soil chemistry on site and within the surrounding area.

- Arsenic - <15mg/kg
- Cadmium - <1.8mg/kg
- Chromium – 60-90mg/kg
- Lead - <100mg/kg
- Nickel – 15-30mg/kg

Reference to the data presented suggests that the majority of metals concentrations are generally anticipated to be below current tier 1 assessment criteria in relation to human health effects.

² <http://www.bgs.ac.uk/discoveringGeology/geologyOfBritain/viewer.html>

³ <http://maps.Environment-agency.gov.uk/wiyby/wiybyController>

⁴ <http://magic.defra.gov.uk/>

Artificial Ground

The site is noted to be artificially modified ground.

Superficial Deposits

The superficial deposits for the site are noted as Devensian Till.

Solid Geology

According to the BGS Geology of Britain Viewer and the relevant British Geological Survey (BGS) Solid and Drift Sheets 121 Wrexham (1993) at a scale of 1:50,000 the following geological succession has been identified (Appendix A).

Table 3.1: Geology

Strata	Description	Age	Rock Type
Solid Geology	Salop Formation	Cisuralian – Westphalian D	Mudstone / Sandstone and Conglomerate

No faults are noted within 500m of the site.

British Geological Society (BGS) Logs / Records

The BGS have not recorded any mineral workings within a 1000m radius of the site.

Ground Stability

Table 3.2 below summarises the natural hazards information presented in the Envirocheck Report.

Table 3.2: Potential Natural Hazards

Natural Hazard	Hazard Potential
Shrink - Swell Clays	Very Low
Landslides	Very Low
Compressible Deposits	No Hazard
Collapsible Deposits	No Hazard
Running Sands	No Hazard

3.4 Coal Mining & Brine Subsidence

The site does fall within a coal mining area. Based on the Coal Mining Report (*Report Reference 51001490083001*) the following is of note:

- The site is not within the zone of likely physical influence from past present or future underground coal mining.
- There are no known coal mining entries on or within 20m of the site.
- The site is not aware of any evidence of damage arising due to geological faults or other lines of weakness that have been affected by coal mining.
- The property is not within the boundary of an opencast site from which coal has been removed by opencast methods in the past, present or future.
- There is no record of mine gas emissions requiring action by the Coal Authority.

A full copy of the Coal Authority Mining Report can be found in *Appendix E*.

3.5 Radon

According to the Envirocheck Report, the property is in an intermediate probability radon area (5 to 10% of homes are estimated to be at or above the Action Level).

Basic radon protective measures are necessary in the construction of new dwellings or extensions.

3.6 Hydrogeology

The Bedrock is classified as a Secondary A Aquifer; these are defined as;

“Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formally classified as minor aquifers”.

The Superficial Deposits are classified as Unproductive Strata. The Unproductive stratum is defined as;

“Rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow”.

The site is not located within a Groundwater Source Protection Zone (SPZ).

There are no groundwater abstraction points listed in the Envirocheck Report within 250m of the site.

3.7 Hydrology

The following is of note:

- The nearest surface water feature is noted on site and thought to be a drain.
- There are twenty four pollution incidents to controlled waters listed in the Envirocheck Report within 250m of the site. The nearest is noted as being 17m north of the site, the pollutant was crude sewage with a significant impact (category 2)
- There are no surface water abstractions listed within the Envirocheck Report within 500m of the site.
- There are no biological quality records noted within 500m of the site.
- There are no chemical quality records noted within 500m of the site.

3.8 Flood Risk

According to the Envirocheck Report the site is within 250m of an area at risk from extreme flooding from rivers or sea without defences.

3.9 Sensitive Land Uses

Ecological Receptors

The Envirocheck database was queried to locate Sites of Special Scientific Interest (SSSI), Special Protection Areas (SPAs), Special Areas of Conservation (SACs), Ramsar Sites, National Nature Reserves, Areas of Outstanding Natural Beauty (AONB), National Parks and Local Nature Reserves within 1km of the site.

- Ancient and Semi Natural Woodland was noted 407m north and 815m north west of the site.
- A plantation on ancient woodland was noted 752m north west of the site.

Significance of Environmental Setting

The significance of the environmental setting is considered by Sutcliffe Investigations to be as follows:

- **Groundwater [LOW-MODERATE SENSITIVITY]** – The site is situated in an area of low-moderate sensitivity with respect to groundwater resources due to the presence of a Unproductive Aquifer and Secondary A Aquifer beneath the site. However, this sensitivity is reduced by the absence of any abstractions (sensitive or otherwise) within the immediate vicinity of the site.

- **Surface Water [MODERATE SENSITIVITY]** – With respect to surface water resources, the site is considered to be located in a low sensitivity setting. This principally related to the Redwither Brook positioned immediately adjacent to the site northern boundary and the possibility that this Brook impinges on to the development site.
- **Flood Risk [MODERATE - HIGH SENSITIVITY]** – The site is within 250m of an area at risk of extreme flooding from rivers or sea without defences.
- **Sensitive Land Uses [LOW SENSITIVITY]** – With respect to sensitive land uses the site is considered to be located in a low sensitive setting.

4 Preliminary Qualitative Risk Assessment

4.1 Conceptual Site Model (CSM)

A conceptual model is an essential element of any site-specific environmental risk assessment. In this context, they are often simple representations of the hypothesised relationships between sources, pathways and receptors. For the purpose of this report, a basic conceptual model has been developed based on the principles of CLR11 and interpretation of information gathered during the Phase I review. Thus, this allows the identification of potential contaminant linkages and whether these linkages have the potential to comprise significant harm and/or pollution of controlled waters in relation to the site. Based on this interpretation, the implications for potential liability associated with soil or water contamination at the site can be evaluated.

- **SOURCES** – the identification of contaminants within the soils and groundwater that represent potential pollution sources;
- **PATHWAYS** – the identification of the potential exposure mechanisms and migration pathways from the potential sources; and
- **RECEPTORS** – the identification of the potential receptors that could be sensitive to harm if exposed to these pollution sources.

Collectively, each of these scenarios would be considered a potential pollutant linkage that may require further assessment.

A preliminary conceptual model is presented below (*Table 4.5*) in accordance with the guidance outlined within CLR11.

Identification of Potential Sources

Based on the information from the desk study, historical maps, published information, and a site walkover a summary of potential contaminant sources is provided in *Table 4.1*.

Table 4.1: Potential Sources

Reference	Potential Sources (Onsite)	Potential Contaminants
S1 – Onsite	Potential Made Ground Potential TPH contamination from heavy good vehicles Varied use industrial units still in operation Several Sub Stations Possible ordnance related contamination	All metals, fuel, hydrocarbons and oils, Asbestos, PCBs and localised ground gas. Cordite and Possible UXO
S2 – Offsite	Wrexham ROF	Cordite and possible UXO All metals, fuel, hydrocarbons

Reference	Potential Sources (Onsite)	Potential Contaminants
		and oils, Asbestos, PCBs and localised ground gas.

Despite the surrounding area being largely industrial, no significant off-site sources that would represent a risk to the site have been identified in the immediate surrounds as part of this PRA.

Potential Exposure Pathways

Exposure pathways are the potential routes and mechanisms by which potential on-site sources could be linked to the identified potential receptors and thereby expose them to potential harm.

The following potential exposure pathways have been identified at the site:

Table 4.2: Potential Pathway

Ref	Pathway	Description
P1	Direct contact with potential contaminants.	Dermal absorption, ingestion and inhalation of contaminants via direct contact.
P2	Ingestion of potential contaminants.	Construction workers may come into contact during the site works, however this will be for a short time and therefore limited exposure will occur. PPE can be used and worn as a precaution to reduce the risk.
P3	Inhalation of potential contaminants.	
P4	Leaching and migration of contaminants.	Leaching of possible contaminants could migrate into the underlying Secondary A Aquifer via shallow groundwater. On site drainage is also at risk from shallow contamination, if present.
P5	Vertical and lateral migration of ground gases / vapours.	There is the potential for contaminants to be present on the site, which could generate ground gas & vapours on site.

Potential Receptors

Based on the site's environmental setting and the proposed future end use of the area following redevelopment, the following potential receptors have been identified:

Table 4.3: Potential Receptors

Ref	Receptor	Description
R1	Current & future site users	Site users; personnel, general workers and maintenance workers,
R2	Construction Workers	Contractors working on the development of the site. Construction workers, maintenance workers or other personnel who may be directly exposed to contaminated materials in the course of their activities).
R3	Controlled Waters	Secondary A and Unproductive Strata and on site drainage
R4	Adjacent Site Users	Adjacent site users. Third-party land (i.e. the possibility of contamination migrating off-site onto third party land via contaminated groundwater, surface water run-off).
R5	Infrastructure / Buried services	Proposed buildings and buried services

NOTE: ground workers (i.e. If the site was redeveloped, any associated activities may bring site personnel and construction workers into contact with potentially contaminative materials, however, it is considered that the risks to workers will be short term and could be controlled by safe working procedures.

Potential Contaminant Linkages

In order for there to be a plausible contaminant linkage there must be a source, receptor and pathway and a feasible linkage between them (a contaminant linkage). Consequently, even where a contaminant is identified, if there is no pathway for the contamination to reach a receptor, or no receptor then there can be no significant risk and remedial actions are not required. Central to this risk assessment process is the development of a 'conceptual model'. This is a descriptive and/or pictorial representation of the area of potential contamination, the surrounding environment and the processes acting on the contaminants by which they can move and come into contact with receptors (e.g. by leaching and migration into groundwater).

Production of a conceptual model requires an assessment of risk to be made. Risk is a combination of the likelihood of an event occurring and the magnitude of its consequences. Therefore, in order to assess risk both the likelihood and the consequences of an event must be taken into account. This report adopts the methodology for risk evaluation presented in CIRIA report C552 'Contaminated Land Risk Assessment – A Guide to Good Practice', 2001. The method is qualitative and involves the classification of the following:

- the magnitude of the potential severity or consequence of the risk occurring;
- the magnitude of the likelihood or probability of the risk occurring; and
- once the likelihood of an event occurring and its severity have been classified, a risk category can be assigned using *Table 4.4*

		Table 4.4: Risk Assessment Matrix			
		Consequence			
		Severe	Medium	Mild	Minor
Likelihood of Occurrence	High	Very High	High	Moderate	Moderate/Low
	Likely	High	Moderate	Moderate/Low	Low
	Low	Moderate	Moderate/Low	Low	Very Low
	Unlikely	Moderate/Low	Low	Very Low	Very Low

Sutcliffe has devised a conceptual model based on the information obtained to date through the desk-based study and future residential usage of the site. This is detailed in tabular format in *Table 4.5* and pictorially in *Figure 4*.

Table 4.5: Preliminary Conceptual Site Model									
1. Hazard Identification		2. Hazard Assessment				3. Risk Estimation		4. Risk Evaluation	5. Managing the Risk
Contaminant Source		Pathway		Receptor		Consequence of risk being realised	Probability of risk being realised	Classification	Action required
S1	On Site - Potentially contaminants	P1	Dermal contact	R1/2	Site users	Medium	Likely	Moderate	It is possible that harm could arise to a designated receptor from an identified hazard. Investigation is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
		P2	Ingestion of soil / soil dust	R1/2	Site users	Medium	Low	Moderate / Low	
		P3	Inhalation of vapours / soil gas	R1/2	Site users	Severe	Low	Moderate	
		P4	Leaching migration and of contaminants	R3/5	Secondary aquifer A	Medium	Low	Moderate / Low	
		P5	Lateral migration of soil gas / vapours	R1	Site users	Severe	Unlikely	Moderate / Low	
				R4	Property	Severe	Unlikely	Moderate / Low	
S1	Off Site - Potentially contaminants	P1	Dermal contact	R1/2	Site users	Minor	Unlikely	Very Low	It is possible that harm could arise to a designated receptor from an identified hazard. Investigation is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
		P2	Ingestion of soil / soil dust	R1/2	Site users	Minor	Unlikely	Very Low	
		P3	Inhalation of vapours / soil gas	R1/2	Site users	Severe	Low	Moderate	
		P4	Leaching migration and of contaminants	R3/5	Secondary aquifer A	Medium	Moderate/Low	Moderate / Low	
		P5	Lateral migration of soil gas / vapours	R1	Site users	Severe	Unlikely	Moderate / Low	
				R4	Property	Severe	Unlikely	Moderate / Low	

Potential contaminant linkages that have been identified as moderate or higher will need to be assessed further. This can be in the form of additional research into the actual plausibility of the contaminant linkage or by the actual site measurements. This can be in the form of soil sampling and vapour monitoring to assess the actual conditions.

5 Conclusions and Recommendations

5.1 Introduction

Sutcliffe Investigations were instructed by FI Real Estate Management, to provide a Phase I PRA report. The purpose of the report is to generate preliminary environmental assessment data for submission with an outline planning application for redevelopment of the site.

This comprised a review of the Phase I PRA data, collection of environmental information and reports undertaken on the site.

5.2 Environmental Risk Assessment Findings

The site is irregular in shape and is bordered by industrial properties, residential properties and areas of open space. The site currently consists of industrial units, some of which are still in use others are disused. The development history of the site has not identified a significant source of environmental concern, and information contained within the environmental database has not highlighted any major concerns however the use of the site has been and still is for a number of varied industrial uses including the potential uses associated with Wrexham ROF. The site is underlain by a Secondary A Aquifer for the bedrock, with Unproductive Stratum for the superficial deposits.

Taking the above into account, it is considered that there is a low to medium potential for significant contamination to be present, however it is considered that localised contamination that may represent a risk to long term human health and also with the potential for leaching of contaminants into controlled waters may be present. Consequently the environmental risk setting for the site is considered to be low to medium.

5.3 Classification and Land Use Risk

The site is irregular in shape, approximately 4.54Ha in size and can be accessed via Bridge Road to the east of the site. The site comprises of commercial units some of which are occupied and others disused. Grass verges are noted around the periphery of the site and occasionally between industrial units.

Historical maps initially indicate that off-site the surrounding land comprised fields, ponds, Redwither Brook, River Clywedog, smithy, tank, industrial units, factory (Wrexham ROF), brickworks, works, farmhouse and a small number of residential properties.

The classification of risk is as follows:

- Class 1 Area: Potential for High levels of contamination and migration of contamination off the site;
- Class 2 Area: Potential for Medium levels of contamination and migration of contamination off site;
- Class 3 Area: Potential for Low levels of contamination and migration of contamination off site; and
- Class 4 Area: Potential for limited contamination.

The Phase I PRA has not highlighted any significant areas of concern, however the site has been and still is used for industrial purposes, therefore, the site is deemed to be Class 2 – Medium Risk.

5.3 Geotechnical Uncertainty

The site has been subject to previous development and therefore, the potential for obstructions cannot be discounted.

5.4 Conclusions and Recommendations

Based on the findings of the Phase I PRA review, Sutcliffe Investigations do not consider there to be any identifiable significant environmental issues regarding the site, however without an investigation of the site this cannot be discounted as the site has previously and currently been used for varied industrial purposes, There is limited information of the ground for geotechnical properties and as such we would therefore recommend the following sequential works are undertaken:

- Commission an Initial UXO Desk Based Assessment. If this confirms a medium to high risk from UXO then a Detailed UXO Desk Based Assessment will be required.
- Submission of this Phase I PRA Report for the benefit of validating the outline planning application.
- Commission a Phase II Ground Investigation designed to discharge any contaminated land conditions that may be assigned to the site and allow the design of economic foundation solutions.
- Commission a Flood Risk Assessment

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
