

First Floor Plan 1:50

Ground Floor Plan 1:50

WINDOW DETAILS

The proposed replacement windows are traditional vertical sliding sash windows, sympathetic in style to the original timber sashes typically found in listed properties within the Overton Conservation Area.

High-quality, sustainably sourced timber, treated for durability and long-term resistance to weathering and decay. The timber will be finished to a high standard to replicate the character of traditional joinery.

Factory-applied RAL 9016 (Traffic White) microporous paint finish to match white of existing heritage windows on the property, also allowing the timber to breathe while protecting it from moisture and UV degradation. The finish has a smooth texture consistent with traditional painted timber sash windows.

Each window features two sliding sashes, with the lower sash operable and the upper sash fixed, in keeping with the traditional sash configuration. Windows will operate via concealed cords and pulleys with lead or spiral weights, maintaining heritage authenticity.

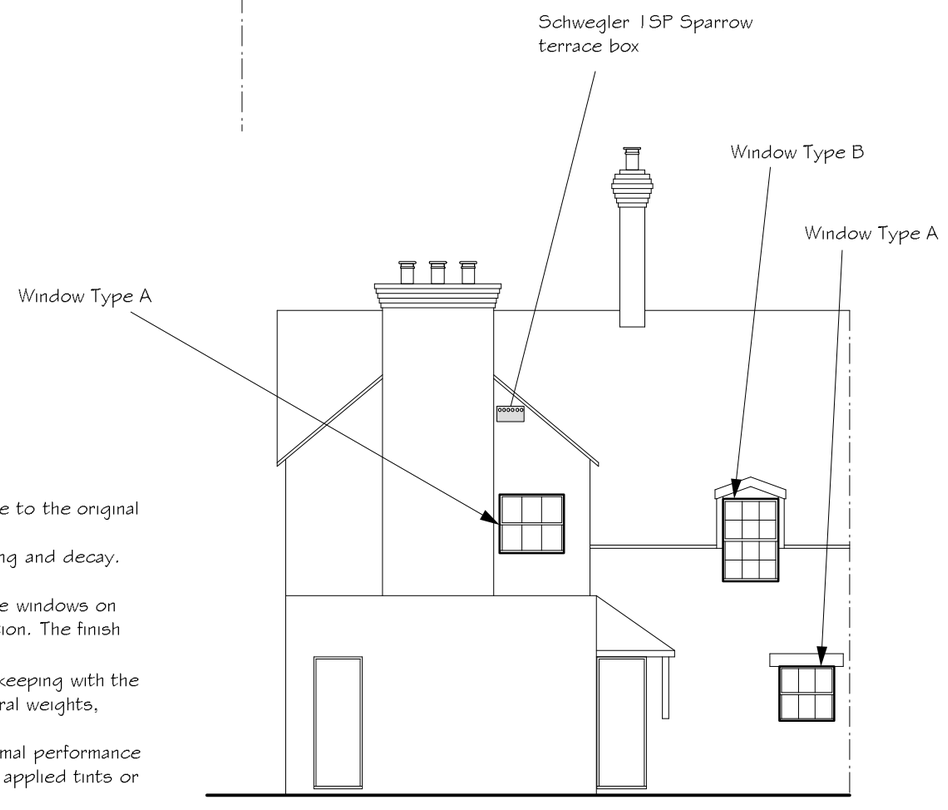

Double-glazed sealed units with slimline spacer bars, using low-emissivity (Low-E) glass to meet thermal performance requirements without compromising historic aesthetics. The glazing incorporates clear glass with no applied tints or patterns.

GREEN INFRASTRUCTURE STATEMENT

The proposed site is located within the Overton conservation area. The application will have no impact on the green infrastructure or biodiversity within the local area. The proposal for a replacement window is a very minimal change, to satisfy the requirements of the conservation area. As documented it is proposed the development includes the erection of bird box in positions indicated and provision for planting of native shrubs in the refurbished garden to provide a net biodiversity gain for the site.

Schwegler 1SP Sparrow terrace box to be installed prior to first beneficial use of the development, located on dwelling in positions indicated.
