

Good day sir / Madam

I would like to register my support regarding the current situation of the application planning for the Christmas Farm UK .

Having visited the attraction 2 times a year for the passed two years I would like to put forward our delights of our visit for many of reasons, The children have absolutely loved it which is what it's about. The maize the pumpkin picking and also visiting the reindeers close to Christmas. [REDACTED] the outdoor life of nature and animals is highly important in his development and this attraction gives him sanctuary and confidence in his nature bubble.

The land is well maintained and the animals are adorable, well loved by all the staff, there knowledge of the reindeers and love and attention they receive is clearly shown, the animals are tame happy and very well cared for.

By providing this as on ongoing attraction would certainly help not only my child but others within the local community and further afield for family days out knowing where they are going is a safe well maintained and happy environment.

The pollution issue stated in your report from earlier this year does not warrant a rejection due to the land disposing of chemicals into the passing river, there are other charities locally who have holdings for animals whereby they are close to the river where pollution of chemicals to the river would be highlighted as a concern if that is your only holding ground. There is no chemical pollution being disregarded at this attraction and all natural environment deposits are like to be the same as that similar to H.A.C.K in Bradley, Wrexham.

For other aspects of the rejection such as pedestrian access and access points they have car parking facilities adequate to accomadate many visitors and a very good member of staff directing vehicles into and out of the site ensuring public safety is paramount.

The issues here as like many of people who walk to the attraction the pavements along the llay road from the welfare to the hollybush are widely overgrown and not passable, meaning the road has to be used, which is not safe. By accessing the road on a speed limited road of 40 where the vehicles exceed 60 is where your concerns should lie. This should not be passed to the Christmas Farm. This is a council issue for not maintaining safety on the highway of your borough.

If the council maintained the pavements with deweeding, hedge/verge cutting and had accessible paths which are for the safety of walkers child cyclists and disabled access users the access points and pedestrians would not be the concern here.

I would really appreciate your revised vision on this attraction which provides various of interactions, nature accessibke grounds and a well presented business for the public at a low affordable cost whilst maintaining health and welfare with love feed and health for there animals and a wonderful day out for many groups families schools and toddler experiences for many years to come.

Should there be anything you wish to speak with me directly on please do not hesitate to contact me direct on

Email

Yours Sincerely

Tracy Edward-Cecil
