

P/2024/0215 Pandy Wood LL20 7PD

Hello Simon,

It is primary for the storage of machinery related to forestry works, which has expanded considerably since the installation of the aforementioned shed, including the purchase of 16 acres of connected woodland to the west, on which a recent track has been applied for and installed. The overall scope and scale of the work has expanded.

I have a winch platform, a harvester, timber machinery, a tractor and 2 trailers and many other items to store in the woods for current and future forestry works, expected to be many years, and they are currently not safe or secure left outside, and cannot fit inside the existing building. Having had robberies and trespassers in the recent past, I want to consolidate and secure my equipment.

Best

Ben.
