Dear Sir/Madam,

Re: Lighting Ecology Compliance Statement – PL0007275 - Ispen Temporary Offices

It is Kellwood Lighting's understanding that the proposed development at Ispen Temporary Offices must have minimal environmental impact; in particular, protecting the existing habitats of Bats present in the area is a concern.

Products have been aligned with the ILP's (2018) 'Bats and artificial lighting in the UK' guidance note. We note that Environmental/Ecology guidelines have been supplied which identify potential areas where environmental conservation should be prioritised. Accordingly, designs can be carried out to comply with these guidelines, general practices, and applying these to site arrangements to avoid potential roost locations, flight paths, and dark buffer zones as best possible.

In order to reduce environmental disturbance, all proposed LED lights are of 3000K (Warm White) Colour Temperature, with downward emitting/aiming optics to limit upward light, this is limited to <0.5%. The proposed lights also feature an integrated Photocell to restrict illumination to peak darkness hours only.

Yours sincerely

Michael Boyom (Project Manager)
