Dear Gwyn,

I hope this email finds you well.

Further to your email regarding the concerns in relation to accessibility, after discussions with our clients they have suggested that they purchase a portable lightweight suitcase ramp that can be provided when required. Reasoning for suggesting this is, they will not be able to construct a ramp there as the pavement does not belong to our clients.

Please find details of the portable ramp below:

The folding, suitcase type ramp is constructed from lightweight, rust-free aluminium and has milled safety treads on the surface, raised side walls and security locks, making the unit extremely portable and convenient to store. With stainless steel fittings and a sturdy carry handle, the ramp has a load capacity of 272kg (42 stone).

Suitable for mobility scooters, manual wheelchairs and powered wheelchairs.

With a slip-resistant coating.

Max user weight: 272kg (43st).

Folds for storage.

Size H5, L61cm.

Weight 4kg.

Please kindly let us know if this solution will be sufficient and please do not hesitate to contact us, should you require any further information.

We look forward to your response.

Kind Regards,
Hazal Banaz
