Barn 2 'front door' brick infill detail.

FAO Wrexham Council Planning Department.

Barn 2 currently has a large gate, covered with corrugated tin.
this gable end of the building is to incorporate a front door and utility room window.
it has been suggested by the previous conservation Officer that the design should not
distract from the original character of the buildings.
to comply with this we intend to use bricks currently on site that were part of a lean-
to that was demolished some time ago by the previous owners.
the bricks would sit 75mm behind the existing brick work on a new suitable
foundation. this would make use of the historic bricks and would satisfy the issues
raised by the previous CO.

the current doorway has a steel RJS lintel and a vertical RSJ on the hung side of the
gate / door. these would remain giving a very good visual indication of its previous
use.

I have included some pictures with a temporary mock up of some brickwork to
explain this further.

please do not hesitate to contact me for further information.

Kind Regards

Thomas Jones
