

As a resident near the planned site I fully support the application. Mobile signal around here is really poor and this 5g mast is very much needed. I have to work from home and struggle for mobile reception to pick up calls. Also, when my Wi-fi drops out, trying to connect via data is near impossible. I really hope this application is granted so that these issues are sorted.

I don't agree with earlier objections that the unit would be a blight on the landscape and the view of residents, as the only view it would potentially obscure is that of a road.

Thanks

Katie French
