Annwyl Syr/Madam / Dear Sir/Madam,

BWRIAD / PROPOSAL: TRAWSNEWID ADEILAD I ANNEDD / CONVERSION OF BUILDING TO DWELLING

LLEOLIAD / LOCATION: HEN HAFOD FARM, HEN HAFOD ROAD, NANTYR, GLYN CEIRIOG, WREXHAM, LL20 7DD

Thank you for consulting Cyfoeth Naturiol Cymru / Natural Resources Wales about the above, which we received on 25.10.2022.

We have concerns with the application as submitted. However, we are satisfied that these concerns can be overcome if the document identified below is included in the approved plans and documents condition on the decision notice:

- **Protected Species Survey for Barn at Hen Hafod, Nantyr, Glyn Ceiriog by Stephen Cutmore Arboricultural & Ecological Services dated 21.06. 2022**

Please note, without the inclusion of this document we would object to this planning application. Further details are provided below.

Protected Species

We note that the bat report submitted in support of the above application (Protected Species Survey for Barn at Hen Hafod, Nantyr, Glyn Ceiriog by Stephen Cutmore Arboricultural & Ecological Services dated 21.06.2022) did not identify the presence of bats at the application site. However the site has potential to support bats and a number of measures are detailed in the report to avoid impacting on bats during and after construction.

Therefore, we advise that the proposed development is not likely to harm or disturb the bats or their breeding sites and resting places at this site, provided the avoidance measures described in Section 7 (Mitigation and Recommendations) of the bat report are implemented.

The report must be included in the 'approved list of plans / documents' condition within the decision notice should consent for the project be granted.

Please consult us again if any further information shows that this is no longer a lower risk case.

Protected Sites

Foul Drainage

We note the application site is within the catchment of the River Dee and Bala Lake Special Area of Conservation (SAC). As you are aware, on the 21st January 2021, we published an evidence package outlining phosphate levels for all river SACs across Wales. In line with our [Planning Advice](#) (July 2022), under the Habitats Regulations, Planning Authorities must consider the phosphorus impact of proposed developments on water quality within SAC river catchments.

However, recognising the specific nature of the application submitted for the conversion of an outbuilding to a dwelling with foul flows being connected to an existing private sewage treatment system which meets the screening criteria set out in our Planning Advice, we are satisfied that it is unlikely to increase the amount of phosphorus entering the catchment. Therefore, we are satisfied that the proposal is not likely to have a significant effect on the River River Dee and Bala Lake SAC.

Sufficient capacity

The developer/applicant should ensure that the existing septic tank has sufficient capacity to accommodate any increase in flows from the proposed development. The Applicant should note, it is a legal requirement to apply for an environmental permit or register an exemption with us. Septic tanks and small sewage treatment works may be registered as exempt from the requirement to obtain an environmental permit if certain criteria are met. Please note, should a permit be required, further information may be required as part of that application and the Applicant is therefore advised to hold pre-application discussions with our Permitting Team on 0300 065 3000, at the earliest opportunity, to try to ensure that there is no conflict between any planning permission granted and the permit requirements. If the Applicant already holds an exemption / permit, they should check whether the proposed increase in flows would require a further application to be made for a new / varied permit. It is important to note that a grant of planning permission does not guarantee that a permit will be granted, should a proposal be deemed to be unacceptable (either because of environmental risk or because upon further investigation, a connection to mains sewer was feasible). The Applicant should ensure that they have all the required permissions, consents, permits and any other approvals in place prior to commencement of works on the site.

More information, including a step by step guide to registering and the relevant application forms are available on our [website](#). Where private sewage treatment/disposal facilities are utilised, they must be installed and maintained in accordance with British Standard 6297 and

Approved Document H of the Building Regulations. We also refer the Applicant to Guidance for Pollution Prevention 4 on the [NetRegs website](#), which provides further information.

Other Matters

Our comments above only relate specifically to matters included on our checklist, *Development Planning Advisory Service: Consultation Topics* (September 2018), which is published on our [website](#). We have not considered potential effects on other matters and do not rule out the potential for the proposed development to affect other interests.

We advise the applicant that, in addition to planning permission, it is their responsibility to ensure they secure all other permits/consents/licences relevant to their development. Please refer to our [website](#) for further details.

If you have any queries on the above, please do not hesitate to contact us.

Yn gywir / Yours faithfully

Sara Thomas
