

Bat boxes will be installed on existing mature trees across the site, including wood crete Schwegler 2F DFP13 and the Vincent Pro Bat Box14. These will be installed in clusters of three under the guidance of an ecologist (locations and numbers shown are indicative only)

Areas of rough, tussocky grassland will also be retained as a habitat for invertebrates, small mammals and birds of prey

Scattered scrub and transitional habitat between woodland and grassland zones will provide good nesting and foraging habitat for wildlife

Bee banks created with spoil from pond creation. These will be located near to ponds and flower rich grassland (locations and numbers shown are indicative only and will be decided on during pond creation).

Alder and Willow planted in wetter areas

Ponds/wetland mosaic

Bee banks created with spoil from pond creation. These will be located near to ponds and flower rich grassland (locations and numbers shown are indicative only and will be decided on during pond creation).

Open grassland areas will be retained and where needed, locally sourced species rich green hay or seed will be added to diversify the sward

Brash piles from hedgerow and tree maintenance work will be left in quiet corners, and will provide additional hibernaculum for amphibians, reptiles and hedgehogs (locations are indicative only).

Bird boxes, including for kestrel and barn owl will be fixed to existing mature trees throughout the site (locations and numbers are indicative only, final locations will be selected on the advice of an Ecologist).
