

have had the brief. At this point the wall between GF5 and GF6 was already out as it was a 1980's wall built "on top of the floor tiles" no foundations and supporting nothing. It was a health and safety danger as it moved as you leaned against it. It was clearly a new addition to the house designed to make the room smaller and compromising the original inglenook.

The Local Planning Authority did not receive this information. Please can you confirm if a qualified archaeological contractor was appointed and present during the undertaking of the ground works. If so please can you provide evidence accordingly?

I am sorry I cannot as I did this prior to knowing this condition but I do have Photos of the floor before and during.

Listed Building Consent has not been sought for the removal or alteration of any of the existing walls within the building. Can you confirm that you instructed the removal or alteration of the following walls and provide any evidence you may hold of the wall construction in the following location Wall removed between GF4 and GF5

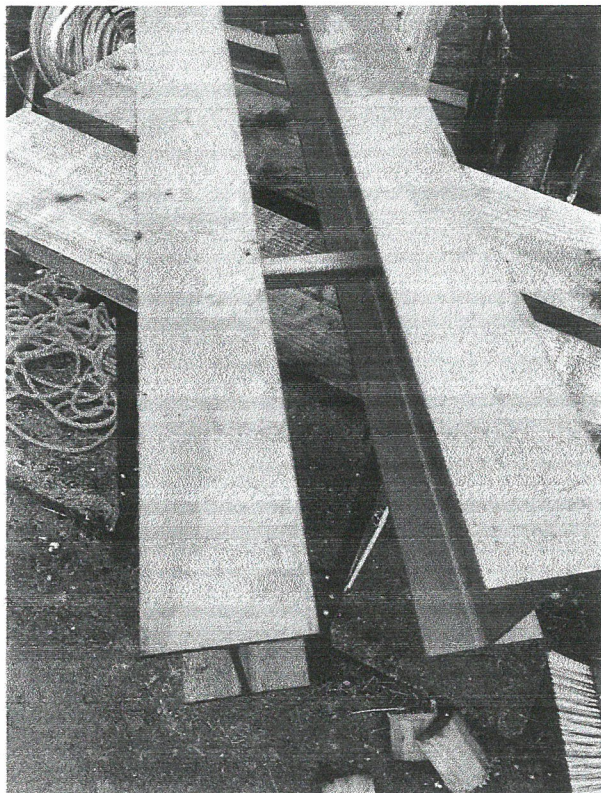

Yes Partial removal Twin Steels inserted

i. *Wall removed between GF5 and GF6*

Unsafe wall, not supporting anything probably 1980's built on top of the existing floor with no foundations, happy to send pictures

ii. *Wall removed between GF6 and GF9*

Steels inserted and again I have kept samples of the steels as we didn't need them as long I as I thought and can get the invoices from Betterskill in Oswestry

Please find original correspondence above from my husband regarding the mentioned wall, when he was speaking to house.
