Dear Mr. Jones,

Re: Crymbal Farm new structures

From our site meeting on the 18th February 2022 and the information submitted, you are looking to improve your existing slurry efficiency by increasing your slurry store capacity.

During our meeting, we discussed installing a new concrete slurry store to give you sufficient storage to be able to store the slurry produced over the 5 month storage period as required by the Water Resources (Control of Agricultural Pollution) (Wales) Regulations 2021 (CoAPR).

The proposed dimensions of the new concrete store are 30.46m diameter and 4.57m in height giving an overall capacity of 3111m³ allowing for 30cm freeboard. This will significantly increase the slurry storage capacity on the farm and improve slurry efficiency enabling you to use the slurry at the most effective times to maximise the nutrient use.

As long as the design and construction is such that it meets the requirements of the CoAPR regulations and poses no risk of surface or groundwater pollution, then we are fully in support of this proposal.

Please contact me if you have any questions about this letter or the regulations.

Yours sincerely

Julian Whitehead
