

BS7M Hedgerow & Light Shade 80/20 Wildflower Meadow

bostonSEEDS

BS7M contains twenty two native British wildflowers and grasses typically found in hedgerows and areas of light shade.

Consisting of 80% grass and 20% wildflowers, BS7M creates a permanent meadow with flowers from May to October. Suitable for creating habitats in hedgerows, woodland edges and any area of partial shade.

BS7M supports bees, butterflies and other pollinators as 86% of the wildflowers included in this mixture are recommended by the Royal Horticultural Society (RHS) as 'Perfect for Pollinators'.

Wildflower seed in Boston Seeds mixtures is of UK native origin.

The definition of UK native seed provided by Natural England is: *British native-origin seed refers to seed originally collected from wild populations in Great Britain (from sites with no known history of sowing of amenity or agricultural varieties) and either sown directly, or grown on as a field crop to provide further seed. It includes seed collected in 'green hay'. It excludes certified amenity or agricultural varieties of native species.*

Boston Seeds UK native wildflower seed is sourced in two ways:

- 1) Seed collections from the wild which are field sown or sown in modules before being field planted as spaced plants. These are then harvested and cleaned to increase seed germination, vigour and purity.
- 2) Meadow collections are taken with owner permission or under license if the meadow is within a registered area. These seeds are then processed to remove excessive admixture and graded so they can be used in measurable amounts in prescribed mixtures.

Contents of wildflower mixtures will vary according to seed and species availability
