

**Orchard Store
Erwallo Uchaf
LL207AG**

Orchard store to house agricultural equipment, a workspace, materials and produce.

The orchard is currently over one acre but we have 4 acres which we are continuing to develop into more orchard and rewild to native broadleaf forest and wildflowers.

The store is clad in local Douglas Fir grown 2 miles away.
Wooden cladding is historically used in the immediate area.

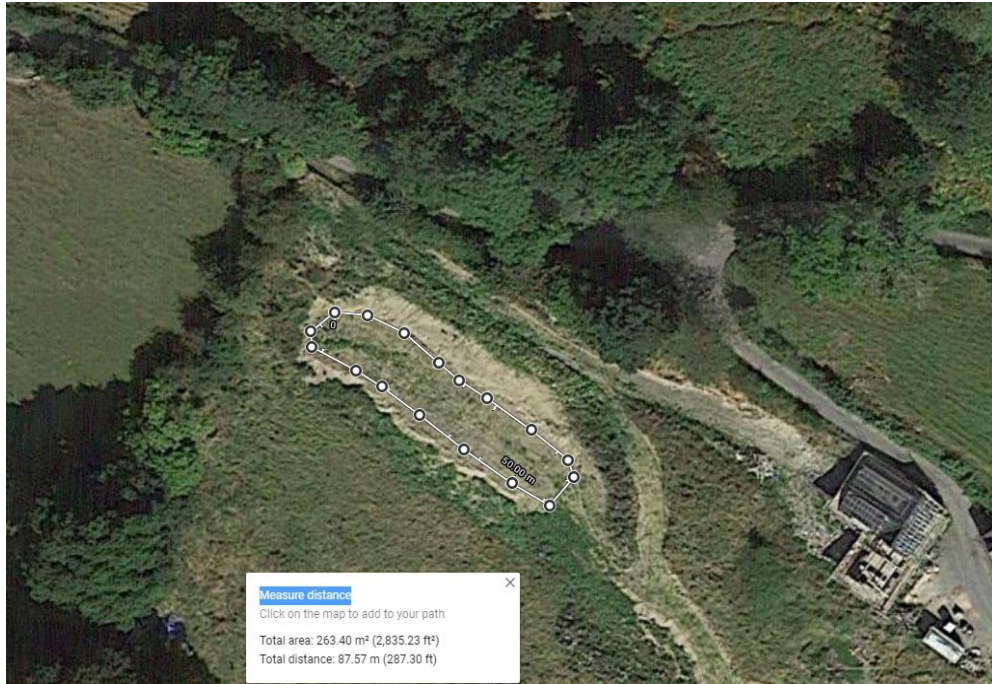

Durability –

Douglas fir is relatively durable, inherently resilient to fungal decay and other quality-decreasing factors. With life expectancy of well over 35 years, Douglas fir is regarded as a generally hardwearing species

<https://www.timbercladdingsolutions.co.uk/douglas-fir-timber-cladding-a-beginners-guide/>

This is the level area where the new orchard is sited, it is 8m x 30m at its largest points

With regard to level area,

No material was brought from off-site and no material was removed

The level area is to become more orchard on the northernmost face and the southern, rewilded to native wildflower meadow

There are no ponds or streams nearby
