Dear Sir/Madam,

PROPOSAL: CONVERSION OF BUILDING TO DWELLING

LOCATION: BLAENAU UCHAF, FRONCYSYLLTE, WREXHAM, LL20 7RY

Thank you for consulting Cyfoeth Naturiol Cymru / Natural Resources Wales about the above, which we received on 22nd May 2022.

We continue to have concerns with the application as submitted because inadequate information has been provided in support of the proposal. To overcome these concerns, you should seek further information from the applicant regarding protected sites and foul drainage. If this information is not provided, we would object to this planning application. Further details are provided below.

Protected Sites and Foul Drainage

We note the application site is within the catchment of the River Dee and Bala Lake Special Area of Conservation (SAC). As you are aware, on the 21st January 2021, we published an evidence package outlining phosphate levels for all river SACs across Wales. As part of this package, we issued a [Planning Position Statement](#), in which we advised that any proposed development that might increase the amount of phosphate within a river SAC catchment could lead to damaging effects to the SAC. Therefore, such proposals should be screened through a Habitats Regulations Assessment (HRA), to determine whether they are likely to have a significant effect on the SAC. We have also issued [Planning Advice](#) (May 2021) which gives specific advice in respect of foul drainage arrangements for new developments.

We note from the information submitted that a private sewage treatment system discharging domestic wastewater to ground is proposed. The information set out in the section titled 'What does this mean for development proposals involving private sewerage treatment systems' has been submitted with the application. We note the additional information submitted demonstrates that the ground conditions (Vp value) are suitable for the installation of a soakaway at this location.

It should also be noted that our Planning Advice states:

“Also, to ensure that there is no significant in combination effect, the discharge to ground should be at least 200m from any other discharge to ground. The density of discharges to ground should also not be greater than 1 for every 4ha (or 25 per km²).”

Our mapping indicates there are a number of discharges within 200m of the proposals. In light of the above information, we advise that your Authority should screen the proposal through a HRA. Should you determine that an Appropriate Assessment is required, the Applicant will then need to submit whatever evidence they deem appropriate (seeking advice from consultants as may be necessary) to demonstrate no adverse effect on site integrity. You should then consult us on your Appropriate Assessment under Regulation 63 of the Conservation of Habitats and Species Regulations 2017 (as amended).

We advise the Applicant to contact our Permitting Team on 0300 065 3000 at the earliest opportunity, to try to ensure that there is no conflict between any planning permission granted and the permit requirements. It is important to note that a grant of planning permission does not guarantee that a permit will be granted, should a proposal be deemed to be unacceptable (either because of environmental risk or because upon further investigation, a connection to mains sewer was feasible). The Applicant should ensure that they have all the required permissions, consents, permits and any other approvals in place prior to commencement of works on the site.

More information, including a step by step guide to registering and the relevant application forms are available on our [website](#). Where private sewage treatment/disposal facilities are utilised, they must be installed and maintained in accordance with British Standard 6297 and Approved Document H of the Building Regulations. We also refer the Applicant to Guidance for Pollution Prevention 4 on the [NetRegs website](#), which provides further information.

Protected Species

We note that the bat report submitted in support of the above application (Star ecology (30/3/22) Bat and Nesting bird Assessment) has identified that no bats are present at the application site. We therefore have no comments to make with respect to protected species.

Protected Landscape

The development site lies within the Anglesey Area of Outstanding Natural Beauty (AONB) where the primary purpose is the conservation and enhancement of natural beauty.

Due to the scale and the location of the proposals, we consider that they are unlikely to significantly affect the purpose of the AONB. However, we would not rule out local landscape effects and recommend you seek the views of your internal landscape advisor.

Other Matters

Our comments above only relate specifically to matters included on our checklist, *Development Planning Advisory Service: Consultation Topics* (September 2018), which is

published on our [website](#). We have not considered potential effects on other matters and do not rule out the potential for the proposed development to affect other interests.

We advise the applicant that, in addition to planning permission, it is their responsibility to ensure they secure all other permits/consents/licences relevant to their development. Please refer to our [website](#) for further details.

If you have any queries on the above, please do not hesitate to contact us.

Yours faithfully

Ruth Prichard
