

Access statement – installation of an EV charger Trevalyn Manor

Proposal.

In order to future proof the Trevalyn Manor estate it will be necessary over the next few years for some or all of the residents to install a way of charging an electric vehicle in their parking space.

The government imposed target is that all new vehicles will be EV's by 2030.

Wherever we live we must support the green agenda.

Therefore the proposal is to introduce the first EV charger to a residents parking space at Trevalyn Manor in the most sympathetic and discreet manner that this can be done.

The Heritage Impact statement and the Arboricultural statement submitted as part of this application have sought to explain how the installation of this EV charger will have a minimal impact on the site and the qualities for which it has been listed.

Discussions have taken place with the Conservation Officer – Kathryn Moore – in order to ensure that the work that is proposed has minimal impact.

This is a single EV charger which will be discreetly placed in a designated parking area in a development which covers 17 acres.
