

Arboricultural impact assessment and method statement – installation of an EV charger,

Proposal

The excavation required to install the EV charger will be along the North side of the main residents car park following the line of an existing gravel path.

To the right of the path on the photographs is a young Yew hedge and to the left are mature Yew trees.

The trench that is required to bury 2 lengths of 6mm electrical cable will be 18 inches deep and 4 inches wide.

Using traditional digging techniques with either a mini digger or by hand and it has been assessed there will be the minimum of disruption to any root structures and none which will cause damage to the existence of the trees or the hedge.

The length of the trench will be approximately 40 meters and the area will be fully made good after the works are completed.

Representatives of the planning department will be welcome on site if they wish to observe the work in progress or prior to commencement.
