1. Summary

The purpose of the report is to assess the potential ecological impacts of a proposed development at Ben Tara, Maes Mawr Road, Llangollen and advise on any mitigation measures to comply with local planning policy and government legislation.

The proposed scheme involves the construction of dormer extensions to the roof of a dwelling.

The site and adjacent land were examined to establish the presence of or evidence of use by bats and birds.

No evidence of use of the house or land by bats or birds was found.

The impacts which the proposed work might have on birds should be minimal, providing that no nests are occupied or being built at the time the work is done. If birds should gain access to the building and begin constructing nests during the development, then the work in that area must stop until the young have left the nests.

A lighting plan should be designed in accordance with the Bat Conservation Trust guidelines: <https://www.theilp.org.uk/documents/guidance-note-8-bats-and-artificial-lighting/>. If bats are found at any stage of the development then work in that area must stop and a licensed bat worker contacted for advice.

There should not be any significant impact on any protected species or habitat as long as the recommended mitigation and compensation measures are followed.

2. Introduction

Susan Worsfold BSc (Hons) ACIEEM is an experienced wildlife surveyor, licensed bat worker and voluntary bat roost visitor. Registration number CLS0895 2015-12555-CLS-CLS (CL15 Bat Roost Visitor Level 1) and registration number CLS 0895 2015-12556-CLS-CLS (CL18 Bat Survey Level 2) (Natural England) and S086005/1 (Natural Resources Wales);

Licensed great crested newt worker, registration number 2016-19947-CLS-CLS (NE) and S086057/1 (NRW)

This report was commissioned by HDS Architectural Services.

The site, at Ben Tara, Maes Mawr Road, Llangollen is a single story dwelling.

The proposed scheme involves the construction of dormer extensions to the roof of the house.

The purpose of the report is to identify and address any significant ecological effects which are likely to occur as a result of the proposed development. This is necessary to comply with local planning policy and government legislation and avoid any offence being committed. Also, to describe any compensation, mitigation and enhancement measures which should be taken.

3. Methodology

3.1. Scope of the Assessment

The report incorporates an preliminary bat roost and nesting bird assessment in accordance with:
The Conservation of Habitats and Species Regulations 2017 and listed in:
Schedule 2. European protected species of animals

3.2. Desk Study

Denbighshire Planning Portal was consulted for a review of previous ecological surveys carried out in the area. Magic Maps was consulted for the presence of designated sites and protected habitats.

3.3. Field Survey

The site was examined to establish the presence of any protected species or habitats, and for evidence of use by protected species of animals. The building was assessed for suitability for use by bats and birds and examined to establish the presence of or evidence of use by them. A visual inspection was carried out to assess the potential or actual use by bats and birds, of the interior and exterior of the building. It was searched systematically for any signs of bats, including droppings, rub marks and urine stains at entrances to roosts and insect remains, such as moth or butterfly wings.

A powerful torch (Ledlenser iH5R) was used for examination under eaves. Binoculars were used to examine parts which were not otherwise accessible. Photographs were taken of all areas and those of relevance are shown in the appendices.

The survey was carried out in accordance with CIEEM guidelines (CIEEM 2017) on 28th August 2021 by Susan Worsfold BSc (Hons) ACIEEM.

4. Baseline Ecological Conditions/Results

4.1 Designated Sites

The nearest designated site is the Ruabon/Llantysilio Mountains and Minera (SSSI) and Berwyn and South Clwyd Mountains (SAC) 570 m west.

4.2 Habitats

Site: The building is detached and is occupied as a dwelling. It is one storey with a small loft space. Walls were of brick, partially rendered externally. The roof was of large concrete tiles with a timber frame, lined with bitumastic hessian felt. The building is in a good state of repair with no missing or loose tiles. There is a flat roofed garage extension at the south west end and a tiled roof small extension at the north east end. There were soffits at both gable ends and soffits at the eaves of the main building. There was no potential access under eaves or at gable ends. Windows glazed and intact. Doors intact with no gaps.

Adjacent land: Good network of hedgerows nearby. Significant mixed woodland 200 m north. No ponds or rivers were apparent on maps within 500 m.

4.3 Species and Species Groups

Birds

None were seen at the time of the survey. No potential for nesting birds.

Bats

No bats were seen to be using the building. No evidence of use of the buildings as a roost or resting place by bats was found. No potential for use as a bat roost. The site is suitable for foraging and commuting bats.

5. Description of the Development

The proposed scheme involves the construction of three dormer extensions to the roof and conversion of the loft to living space. This will involve removal of a large number of roof tiles.

6. Assessment of Effects and Mitigation Measures

Designated Sites:

It is not considered that the proposal will have any significant impact on any designated sites.

Habitats:

No priority habitat is affected by the proposal and no net loss of potential roosting or nesting sites will occur.

Species:

Birds

The impacts which the proposed work might have on birds should be minimal, providing that no nests are occupied or being built at the time the work is done. If birds should gain access to the buildings and begin constructing nests during the development, then the work in that area must stop until the young have left the nests.

Bats

The site may be used by foraging and commuting bats. Therefore a lighting plan should be designed in accordance with the Bat Conservation Trust guidelines: <https://www.theilp.org.uk/documents/guidance-note-8-bats-and-artificial-lighting/>. If bats are found at any stage of the development then work in that area must stop and a licensed bat worker contacted for advice.

Residual Effects

No significant residual effects anticipated.

7. Compensation

None considered appropriate.

8. Enhancement Recommendations

Bats: A woodcrete/woodstone crevice dwelling bat box to be fitted externally to the house at the south west gable end. Further information is given in the bat box information pack available at <http://www.bats.org.uk/index.php>.

Birds: One woodcrete/woodstone general purpose nest suitable for small birds such as robin, tit species and sparrow to be fitted at the north east gable end.

Bat and bird box options available from www.nhbs.com and www.wildcare.co.uk among others.

9. Ecological Constraints

None

10. Monitoring

None considered appropriate.

11. Conclusions

No evidence of use of the house or land by bats or birds was found. If the recommended mitigation and enhancement measures are taken the overall ecological impacts of the proposed development will be low due to its small scale of the proposal and lack of evidence of any rare or threatened species or priority habitat on site.

Appendix 13.7: Legislation Relating to Bats

All species of bats in the UK are European Protected Species (EPS). It is against the law to damage or destroy a bat's breeding site or resting place (known as a roost), or deliberately to capture, kill, injure or disturb a bat

Bats are the only mammals which can fly. They are warm blooded, they suckle their babies and are intelligent, social animals. British bats feed only on insects, of which they consume vast numbers to sustain their energetic lifestyles. A pipistrelle bat can eat up to 3000 midges in a single night!

We have 12 species of bat breeding in Wales. Many of these have suffered severe declines, not just in Britain but throughout Europe.

All British bat species are protected under the Conservation of Habitats and Species Regulations 2017, known as the 'Habitats Regulations'. Bats have a unique relationship with humans, sometimes sharing our homes for part of the year. For this reason, Natural Resources Wales (NRW) deals with many hundreds of bat enquiries each year from householders.

Under the Habitats Regulations, it is an offence if you:

deliberately capture, injure or kill any wild animal of an EPS
deliberately disturb wild animals of any such species
damage or destroy a breeding site or resting place of such an animal
Disturbance includes, but is not limited to, any disturbance which is likely:

1. to impair their ability –
to survive, to breed or reproduce, or to rear or nurture their young, or
in the case of animals of a hibernating or migratory species, to hibernate or migrate; or
2. to affect significantly the local distribution or abundance of the species to which they belong.

Defra and the Welsh Government will publish a joint guidance document on the interpretation of the offences relating to disturbance, and to damage and destruction of breeding sites and resting places.

There are other offences relating to possession, transport and sale.

NRW issues licences under Regulation 55 of the Habitats Regulations to allow you to work within the law.

If you are a householder and have concerns about bats at your property (other than queries related to planning applications or a development), contact the NRW Enquiry Line for advice, telephone 0300 065 3000

Appendix 13.8: Legislation Relating to Birds

All wild birds, their nests and eggs are protected. It is an offence to intentionally:

kill, injure or take any wild bird,
take, damage or destroy the nest of a Golden Eagle, White-tailed Eagle or Osprey (even if disused),
take, damage or destroy the nest of any wild bird whilst it is in use or being built,
take, damage or destroy an egg or any wild bird,
possess any live or dead wild bird or the egg of any wild bird, or any derivative

Many rare birds are listed on Schedule 1, which makes it an offence to intentionally or recklessly:

disturb a Schedule 1 bird while it is building a nest or is in, on or near a nest containing eggs or young; or
disturb dependent young of such a bird

Natural Resources Wales (NRW) issues licences for specific purposes, so that you can undertake legitimate work without breaking the law. See 'Bird licensing' for more information.
