

C,J .POOLS- PRESTATYN

SWIMMING POOL SPECIALIST

The Soakaway is as follows:

- *6" clean limestone infill, with a 4" vertical breather pipe from the base to ground level, perforated all the way up.*
- *The 6" hardcore to be installed to a depth of 600mm from the finished garden level.*
- *2" clean limestone to a further 300mm from the finished garden level.*
- *Visqueen over the hardcore.*
- *Earth onto the visqueen up to garden level.*

This is ample for backwashing the pool on a fortnightly basis.

The limestone kills any chlorine that may be in the water, although backwashed water is normally lower than a 1ppm residual chlorine anyway.

The upright breather pipe is finished with a breathable lid approximately 150mm above the finished garden level.

We trust this as adequate for John's requirements, if not please ask him to contact us.
