Sharon

As requested please find attached the chemical results from the additional analysis undertaken from the additional WS/HP05A position situated as requested within the backfilled pond. The results confirm that asbestos has been encountered. This was recorded in the previous investigation as well. Based on this the previous recommendations remain.

In terms of the gas monitoring undertaken, and as discussed.

The gas reading from WS/HP05A are as follows;

CH4 0.2% vol
CO2 1.4% vol
O2 18% vol
CO 1ppm
H2s 0ppm
Flow 0.1 l/hour
Atmospheric pressure 1006 mb
Installation was dry.

Based on this there is no further gas risk has been identified and no additional gas protection measures are required for the new building. A radon barrier however will be installed as recommended previously.

This will be reported in a letter shortly and sent to yourselves.

Many thanks,

Richard Hamilton
