EXECUTIVE SUMMARY

On the instructions of d2 Architects on behalf of Pro-Serve Logistics Limited, a Preliminary Risk Assessment in the form of a desk study and site reconnaissance has been carried out in order to assess the potential hazards on and adjacent to the site and prepare a risk assessment for further consideration.

The site is situated at Wrexham industrial estate, approximately 4 km to the east of the town centre of Wrexham and may be located by National Grid Reference SJ 337550, 350000.

The geological map indicates the site to be underlain by Landscaped ground. However the BGS Geological Viewer indicates the site to be underlain by Glacial Till.

The superficial deposits are underlain by bedrock of the Salop Formation comprising of mudstone, sandstone and conglometere of Carboniferous.

The British Geological Survey, in conjunction with the Radiation Protection Division of the Health Protection Agency, ref. 8.7, indicates the site to lie within an area where there is a probability of 1% to 3% of present or future homes being above the action level of 200Bq/m^3. As such, the site is classified as a Radon Affected Area.

The research has identified the following potential sources of contamination which may form part of a pollutant link: 1) contamination associated with the electrical substation, 2) contamination associated with made ground, 3) Radon, 4) contamination associated with unknown items stored in warehouse and 5) contamination associated with fuel tank and historical tank.

The research has identified evidence of potential sources of soil contamination on or which may impact on the site, however as the site will be wholly covered with buildings and concrete hardstanding risks to end users are considered to be very low, however basic radon protection measure are recommended.

Limited soil sampling and analysis may be considered to inform contamination risks associated with the construction period.

If development proposals are amended to include areas of soft landscaping then intrusive investigation should be carried out to determine risks to end users.

1.0 INTRODUCTION

1.1 General

1.1.1 On the instructions of d2 Architects on behalf of Proserve Logistics Limited, a Preliminary Risk Assessment in the form of a desk study and site reconnaissance has been carried out in order to assess the potential hazards on and adjacent to the site and prepare a risk assessment for further consideration.

1.1.2 It is understood that it is proposed to develop the site for a single storey warehouse extension.

1.1.3 This report has been prepared for the sole use of the Client for the purpose described and no extended duty of care to any third party is implied or offered. Third parties using any information contained within this report do so at their own risk.

1.1.4 It is recommended that a copy of this report be submitted to the relevant authorities to enable them to carry out their own site assessment and provide any comments.

1.1.5 The comments given in this report and the opinions expressed herein are based on the information obtained from the desk study and site reconnaissance. No intrusive investigation has been carried out to confirm the actual ground or environmental conditions.

1.1.6 Any risks identified in this report are perceived risks based on information reviewed. Actual risks can only be assessed following a physical investigation of the site.

1.1.7 This report has been based, in part, on information supplied by others. The report has been prepared on the basis of that information being accurate.

1.1.8 The conclusions presented in this report are based on the guidance available at the time of preparation of the report. No liability can be accepted for the retrospective effects of any changes or amendments to legislation or guidance.

1.1.9 This Preliminary Risk Assessment has been conducted in general accordance with CLR 3, ref. 8.1, CLR 11, ref 8.2, BS 10175, ref 8.3, and GPLC 1, ref 8.4.

2.0 SITE

2.1 Site Location

2.1.1 The site is situated at Pro-Serve Logistics Limited approximately 4km to the east of the town centre of Wrexham.

2.1.2 Site may be located by National Grid Reference SJ 337550, 350000.

2.1.3 A site location plan and aerial photograph are included in Appendix 1, Figures A1.1 and A1.2.

2.2 Site Walkover and Description

2.2.1 A walkover survey of the site was conducted on 20th June 2016. The walkover was carried out in general accordance with CLR 2, ref. 8.5.

2.2.2 The site was rectangular in shape with approximate dimensions of 100m by 25m. The site was level.

2.2.3 At the time of the walkover survey, the site comprised an existing single storey warehouse with associated concrete and tarmacadam service yard and a vegetated parcel of land to the east of the existing building.

2.2.4 The existing warehouse appeared to be used for storage, however during the walkover access to the warehouse was inhibited. As such the items stored within the building were not examined and therefore may be considered to be a potential contamination source.

2.2.5 Storage of wire mesh and metal rods was located to the east of the building within the service yard.

2.2.6 The vegetated area located to the east of the site comprised included deciduous tree and brambles and grass.

2.2.7 An electrical substation was located north of the existing building (Figure A2.8).

2.2.8 An above surface diesel tank was located outside the site to the north (Figure A2.9).

2.2.9 An historical borehole was located to the west of the site (Figure A2.11).

2.2.10 The site was accessed from Ash Road North to the west of the site.

2.2.11 The site was bound to the north and south commercial units, to the east by woodland and to the west by Ash Road North.

2.2.12 Photographs from the walkover survey are included within Appendix 2, Figures A2.1 to A2.11. A site plan is included in Appendix 1, Figure A1.3.

2.3 Historical Maps

2.3.1 A review of the history of the site has been conducted based on readily available historical maps. Details of the findings are provided in the table below. All maps are provided in Appendix 4.

Map, Date and Scale	Site Description	Regional Setting
Denbighshire 1879 1:10 560	The site is within agricultural fields. Field boundaries are located to the east of the site. Erlas Wood forms the eastern site boundary.	Two ponds were located 5m southwest of the site. Unnamed road located 100m west of the site. Residential dwelling identified as Little Erlas is located 200m southwest.
Cheshire 1881 1:10 560	No significant change from 1879	A bench mark 200m, located to the southwest of the site indicates a level of 109.9feet (approx. 33.49mOD).
Denbighshire 1899 1:10 560	No significant change from 1879	Erlas Lane is identified 100m west. Redwither Brook is located 150m south of the site. A sunday school is located 300m southwest. A spring is located 750m northwest of the site.
Denbighshire 1899 1:2,500	No significant change from 1879	A well is located 300m northeast of the site.
Denbighshire 1914 1:10 560	No significant change from 1879	Green lane is identified 250m east.
Denbighshire 1938-1954 1:10 560	No significant change from 1879	No significant change from 1914
Denbighshire 1954 1:10 560	Linear structures are located on site.	Construction of linear buildings and associated access tracks located south of the site. A bench mark 50m, located to the southwest of the site indicates a level of 123.24 feet (approx. 37.56mOD). Ponds no longer present to the south of the site.
Ordnance Survey Plan 1961 1:2,500	Railway track located within the northwest corner of the site. Earth bunker located to the northeast of the site. Ash road intersects the western boundary of the site.	Mineral railway running southeast to northwest located 45m west of the site.
Additional SIMs 1961 1:2,500	No significant change from 1961	Works located 20m north and 100m south of the site.

Map, Date and Scale	Site Description	Regional Setting
Ordnance Survey Plan 1964 1:10,000	No significant change from 1964	No significant change from 1961
Additional SIMs 1982 1:2,500	Railway tracks, linear buildings and earth bund are no longer present on site. Rectangular commercial unit with car parking is located within the centre of the site. Ash Road forms the western site boundary.	The site is surrounded by newly constructed commercial units forming Wrexham Industrial Estate. Mineral Railway is no longer present west of the site
Ordnance Survey Plan 1985 1:2,500	A tank is located within southwestern corner of the site. Building on site identified as a factory.	An electrical substation is located 20m south of the site.
Additional SIMs 1986-1988 1:2,500	No significant change from 1985	Ash Road (south) is located 200m north of the site.
Additional SIMs 1986-1988 1:2,500	An electrical substation and a additional tank is located centrally onsite.	No significant change from 1985
Ordnance Survey Plan 1992 1:10,000	No significant change from 1986	Further expansion of Wrexham industrial estate to the south and to the east of the site.
Large-Scale National Grid Data 1993-1994 1:2,500	No significant change from 1986	No significant change from 1992
Large-Scale National Grid Data 1994-1995 1:2,500	Tanks no longer present on site.	No significant change from 1992

Map, Date and Scale	Site Description	Regional Setting
10k Raster Mapping 2000 1:10,000 & Historical Aerial Photography 2003 & 10k Raster Mapping 2006 1:10,000 & VectorMap Local 2016	No significant change from 1986	No significant change from 1992

2.1 Anecdotal Evidence

2.1.1 During a second visit to site carried out on the 10th August 2016 a conservation with an employee on site indicated that the tank in the west of the site was removed approximately 20 years ago. However, its usage was unknown.

2.2 Summary

2.2.1 The site has been within agricultural land from 1879 to about 1954.

2.2.2 Buildings were construction on site during the mid-1950s. The buildings were replaced with factory in early 1980s.

2.2.3 Tanks were located on site since 1985 and remained until 1995.

2.2.4 During the walkover an above ground tank was located to the north of the site. The tank was in good condition and there was no evidence of historical leakages. The tank identified to the west of the site was no longer present.

2.2.5 Electrical substation was located on site since 1985 and remained until present day.

2.2.6 The site has been surrounded by agricultural land until 1954 when linear building and access tracks were located, which later was identified (post 1961) as Wrexham Industrial Estate.

2.2.7 Although not indicated on the historical maps the Wrexham Industrial Estate had its origins as a Royal Ordnance Factory, developed by the military during WWII for the manufacture of cordite. Cordite was used as an explosive propellant for shells.

2.2.8 The cordite manufacturing, storage and transport facility was spread over a large area to minimise damage from aerial attack.

2.2.9 Post WWII the buildings were given over to a range of light industrial uses in the absence of a demand for cordite.

2.2.10 Between 1961 and 1982 building were located on site.

2.2.11 An embankment is located within the north-eastern site corner were associated with the works south east of the site. The embankments were removed 1982.

3.0 SITE SETTING

3.1 Geological Setting

3.1.1 Details of the geology underlying the site have been obtained from the relevant geological map of the area, ref. 8.6.

3.1.2 The geological map indicates the site to be underlain by superficial deposits of Glacial Till.

3.1.3 The superficial deposits are underlain by bedrock of the Salop Formation, described as mudstone, sandstone and conglomerate of Carboniferous.

3.1.4 The geological map indicates Made Ground may exist on the site.

3.2 Hydrogeological Setting

3.2.1 The hydrogeological records, provided by the Environment Agency, indicate that the majority of the site is on an Unproductive Aquifer, relating to Glacial Till.

3.2.2 The site is located on a Secondary A Aquifer, relating to the variably permeable bedrock of the Salop Formation.

3.2.3 The Environment Agency defines Secondary A aquifers as 'permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers'.

3.2.4 The Environment Agency defines unproductive strata as 'rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow'. However, groundwater flow through such rocks, although imperceptible, does take place and will need to be considered in assessing the risk associated with persistent pollutants.

3.2.5 The Envirocheck vulnerability map indicates the soil to be of high leaching potential.

3.2.6 Soils of high leaching potential are soils that readily transmit liquid discharges because they are either shallow or susceptible to rapid by-pass flow directly to rock, gravel or groundwater.

3.2.7 The site is not located within a groundwater source protection zone.

3.2.8 There are no groundwater abstraction wells within 1km of the site.

3.3 Hydrological Setting

3.3.1 The nearest surface watercourse is unnamed drainage ditch, located approximately 80m to the west of the site at its closest point.

3.3.2 The site is not situated within an area defined by the Environment Agency as being at risk of flooding from rivers or the sea at the extent of extreme flood. The risk to the site is considered by the Environment Agency to be low significant.

3.3.3 There is no available river quality classification data for the nearest watercourse.

3.3.4 There is one surface water abstraction within 507m, north east of the site. The abstraction is related to abstraction of water from tributary of Redwither Brook for cooling by Caparo Wire Ltd.

3.4 Radon

3.4.1 The British Geological Survey, in conjunction with the Radiation Protection Division of the Health Protection Agency, ref. 8.7, indicates the site to lie within an area where there is a probability of 1% to 3% of present or future homes being above the action level of 200Bq/m^3. As such, the site is classified as a Radon Affected Area.

3.4.2 The guidance recommends that basic radon protective measures should be installed in the proposed development in line with the Building Research Establishment, Report BR211, ref 8.8.

3.5 Soil Geochemistry

3.5.1 The British Geological Survey data indicates the following concentrations of naturally occurring metals to be representative of background levels in natural soil underlying the site. The levels are based on those present in rural soils and are not necessarily representative of levels within Made Ground which may be encountered on site:

Element	Concentration (mg/kg)
Arsenic	<15
Cadmium	<1.8
Chromium	60-90
Lead	<100
Nickel	15-30

4.0 ASSESSMENT OF GEOTECHNICAL RISK

4.1 Geological Constraints

4.1.1 The following are brief findings relating to factors identified during the research from the Envirocheck that may have a potential impact upon the engineering of the proposed development.

Potential Hazard	Assessed Risk	Comment
Coal Mining	Low	In an area which may be affected by coal mining activity. It is recommended that a coal mining report is obtained from the Coal Authority (section 4.2).
Collapsible Ground	Very low	
Compressible Ground	No hazard	
Ground Dissolution	No hazard	
Landslide	Very low	The site is level
Running Sand	Very low	
Unconsolidated Made Ground	Moderate	Geological map states landscaped ground present on site.

4.2 Mining report

4.2.1 A Coal Mining Report has been obtained from the Coal Authority and is presented in Appendix 5.

4.2.2 The report indicates that the site is not located within the zone of likely physical influence on the surface from past underground workings.

4.2.3 The site is not within a zone of likely physical influence on the surface from any present underground coal workings.

4.2.4 Reserves of coal, however, do exist in the locality, which could be worked at some time in the future subject to feasibility, licences and planning consents.

4.2.5 The report indicates “the property does not lie within 200m of the boundary of an opencast site”. The site is also not within 800m of an opencast site that is awaiting determination or has been granted a licence to extract coal.

4.2.6 There are no records of any mine entries within or within 20m of the boundary of the site.

4.2.7 There is no record of a mine gas emission requiring action within the boundaries of the site.

4.2.8 The report shows that there has been no damage notice or claim for the site since 31st October 1994. However there have been six claims within 50m of the property boundary.

4.2.9 The site is not in an area in which a notice of entitlement to withdraw support under section 41 of Coal Industry Act 1994.

4.2.10 The site is not situated within the Cheshire Brine Subsidence Compensation District.

4.3 Geotechnical Risk Assessment

4.3.1 An assessment of the main hazards associated with the site is detailed below. Unless stated otherwise, the presence of such hazards are based on information from the research or reconnaissance and have not been confirmed by an intrusive investigation.

- Soil Conditions

  The former bunded area located to north eastern site corner is a moderate risk due to unknown nature of the material used to backfill the excavations. Such material may be both highly compressible and variable, potentially leading to excessive total and differential settlements.

- Topography

  The Envirocheck data provided indicates only a very low risk of landslip subsidence.

4.4 Conclusions of Geotechnical Risk Assessment

4.4.1 The research has identified evidence of potential hazards associated with underlying ground conditions, either natural or man-made, and therefore it is recommended that further work be carried out to confirm the presence, nature or extent of those hazards anticipated to impact on the site.

5.0 ENVIRONMENTAL SEARCHES

5.1 Potential Sources of Contamination

5.1.1 A search was made of records held by the various regulatory authorities and other statutory bodies to determine the presence or otherwise of past and current activities on or within 500m of the site which have the potential to give rise to the presence on site of contaminants. The findings are given in the table below:

Activity	On Site	Off Site (distance / direction)	Detail
Contaminated Land Register Entries	None	None within 500m	
Discharge Consents	None	Three at up to 250m, ten at 250-500m	Closest at 200m, south west, of freshwater/river to Redwither Brook. to River Irvine. Remainder all for surface water or sewage effluent overflow discharge
Integrated and Local Authority Pollution Prevention and Controls	None	Four at up to 250m, seventeen at 250-500m	Closest relates to an air pollution control for a chemical industry. Remainder relate to manufacturing, paint spraying, metal coating, printing and textile processes.
Pollution Incidents to Controlled Waters	None	Seven at up to 250m, twenty-eight at 250-500m	Closest relates to category 2, significant incident caused by run off of unknown pollutant. Located 170m, south east.
Prosecutions Relating to Authorised Processes or Controlled Waters	None	None within 500m	
Registered Radioactive Substances	None	Three up to 90m	Closest at 70m, northwest, Specwood Ltd, authorised to dispose radioactive waste
Substantiated Pollution Incident Register	None	Four up to 500m.	Closest relates to category 2, significant incident where pesticides discharged into water environment, located 271m south east.
Water Abstractions	None	None within 500m	
BGS Recorded Landfill Sites	None	None within 500m	
Historical Landfill Sites	None	One at 365m, south east.	Licence holder: British Celanese Limited - disposal of industrial waste and liquid sludge
Licenced Waste Management Facilities	None	None within 500m	
Local Authority Recorded Landfill Sites	None	None within 500m	

Activity	On Site	Off Site (distance / direction)	Detail
Registered Landfill Sites	None	One at 393m, south east.	British Celanese Limited, were authorized to landfill asbestos, cellulose waste, contaminated, delagged pipes and oil/water mixtures.
Registered Waste Transfer Sites	None	None within 500m	
Registered Waste Treatment or Disposal Sites	None	None within 500m	
Hazardous Substances	None	None within 500m	
Explosive Sites	None	None within 500m	
Contemporary Trade Entries	Two	Twenty at 31-250m, sixty two at 250-500m	Two trade entries on site: plastic injection moulding, inactive and Milner engineering which is current on site. remainder relate to a wide range of commercial and retail activities commonplace in an urban setting,
Fuel Station Entries	None	None within 500m	

5.2 Green Belt Areas

5.2.1 There are no designated areas or as yet un-adopted areas of Green Belt land within 1km of the site.

5.3 Designated Sites

5.3.1 A review of the Envirocheck Data, was undertaken to assess whether there were any Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) or Local Nature Reserves (LNR) which may be impacted by the development.

5.3.2 The enquiries indicated there are no SSSIs, NNRs or LNRs within 1km of the site.

5.3.3 Three ancient woodlands are indicated between 1m and 465m. Closest is 1m east, identified as Elras Black Wood.

5.4 Nitrate Vulnerable Zone

5.4.1 The site is not located within an area designated as a nitrate vulnerable zone.

6.0 ASSESSMENT OF GEOENVIRONMENTAL RISK

6.1 General

6.1.1 The definition of 'contaminated land', along with the relevant details on legislation and guidance is set out in Appendix 3.

6.1.2 The assessment of potential risk has been based on the guidelines given in CIRIA report C552, ref 8.9. These guidelines are summarised in Appendix 3.

6.1.3 The assessment of environmental risk is aimed at identifying the possible risk, if any, arising from substances used or deposited on the site, or from any other sources of land contamination, based on the principles of the pollutant linkage.

6.1.4 The assessment is based on the proposed development end use, taking account of present and previous use. It is based only on a review of historical maps, desk based data and site reconnaissance; therefore it contains some elements of conjecture based on professional judgement. A comprehensive risk assessment can only be made following an intrusive investigation and testing regime.

6.1.5 The proposed development comprises extension of the existing commercial unit.

6.2 Potential Sources of Contamination Identified

6.2.1 The research has identified the following potential sources of contamination which may form part of a pollutant linkage:

- Contamination associated with Made Ground due to previous development adjacent to site
- Contamination associated with electrical sub station
- Radon
- Contamination with off-site fuel tank and the other tank
- Contamination associated with unknown items stored within warehouse

6.3 Potential Pathways Identified

6.3.1 The research has identified a number of potential pathways which are relevant to the potential sources of contamination identified above and may form part of a pollutant linkage.

6.3.2 Those identified are detailed within the Conceptual Site Model, along with the receptors relevant to the development on a site specific basis.

6.4 Hazard Identification

6.4.1 The research has identified a number of potential sources and pathways which are considered 'likely' to be present which, taking into account the potential receptors identified, form potential pollutant linkages and have been used in the formulation of the Conceptual Site Model.

6.5 Hazard Assessment

6.5.1 An assessment of the main sources of contamination and the potential for unacceptable risk to receptors is detailed below. Unless stated otherwise, it is considered 'likely' that a potential source is present at this stage, in order to provide a preliminary estimation of the risk and therefore determine the need for further work.

- Human Health

  There is evidence for the potential for radon to be present at levels for which basic protection measures have been recommended. The risk to end-users is considered to be moderate

- Construction Material

  There is considered to be a moderate to low risk due to chemical attack on construction materials emplaced within the Made Ground.

6.6 Conceptual Site Model

6.6.1 The research has therefore identified the following pollutant linkages that require further consideration and have been used to formulate the Conceptual Site Model.

Potential Contamination Sources	Potential Contaminants of Concern	Potential Pathways	Receptor Group
Possible contamination associated with made ground and electrical substation, fuel tank and unknown items in warehouse	Inorganic Compounds • Metals • Cyanide Organic Compounds • TPH • PAH Others • Asbestos • PCBs	• Inhalation of contaminated dust • Vapour inhalation	Human Health • Site occupants • Site users • Construction workers • Maintenance workers
		• Surface run-off	Controlled Waters • Surface waters
		• Direct contact of contaminants with building materials	Building Materials or Services • Concrete
Natural Geology	• Radon	• Inhalation • Explosion	• Human Health • Property

6.7 Conclusions of Geoenvironmental Risk Assessment

6.7.1 The research has identified evidence of potential sources of contamination on or which may impact on the site. Due to the nature of the development these are considered to pose a very low risk to end users.

6.7.2 If development proposals are amended to include areas of soft landscaping then further work should be carried out to confirm the presence, nature or extent of any contamination which is anticipated to impact on the site as there will be a potential pathway and enhanced potential risk to end users.

6.8 Consultation

6.8.1 During development, consultation may be required for a number of reasons with a number of regulatory Authorities. The following provides an indication as to the most likely Authorities with which consultation may be required:

- **Local Authority.** There may be a planning condition regarding contamination and consultation will be required with a designated Contaminated Land Officer within the Environmental Health Department. The Local Authority is generally concerned with human health risks.

- **Environment Agency.** Where a site is within a groundwater protection zone or has been designated as a special site, the Environment Agency is likely to be involved to ensure that controlled waters are protected.

6.8.2 Based on the results of any consultation, there may be specific investigation and/or remediation requirements imposed by one or more of the Authorities.

7.0 RECOMMENDATIONS

7.1 Further Work

7.1.1 The proposed development will result in complete coverage of the site by buildings and hardstanding. Limited soil sampling and analysis may be considered to inform contamination risks associated with the construction period.

7.1.2 Installation of basic radon protection measures are required.

7.1.3 If development proposals are amended to include areas of soft landscaping then intrusive investigation should be carried out to determine risks to end users.

7.2 Other Considerations

7.2.1 There are several other areas of research which are beyond the scope of this report. All or none of the following may be applicable to the site, either on the outcome of consultation with a regulatory body or as a result of the research for this Preliminary Risk Assessment. They include:

- **Archaeology.** Should the site be situated on or within an area of archaeological sensitivity, the advisor to the relevant local authority should be consulted. The requirement for an archaeological report may be identified within a planning condition, if appropriate, for the site.

- **Ecology.** There may be a requirement for a detailed ecological report, dependant on the type or size of the development, or due to evidence identified during the site reconnaissance or desk study. This requirement may be identified within a planning condition, or recommended within Section 7.0.

- **Unexploded Ordnance (UXO).** There may be a requirement for a UXO report, dependant on the site location, historical use and surrounding site history, as well as the type or size of the development. Areas of low potential for UXO may include rural greenfield sites, well away from any military installations; however this does not mean there is no risk in such areas. The risk increases within urban areas, particularly those with wartime installations and infrastructure (e.g. power stations, industrial centres). Clearly wartime military establishments and their close surroundings have to be classed as high risk. This requirement may be identified within a planning condition.

APPENDIX 3

ENVIRONMENTAL RISK

APPENDIX 3

ENVIRONMENTAL RISK ASSESSMENT

A3.1 STATUTORY FRAMEWORK AND DEFINITIONS

A3.1.1 The statutory definition of 'contaminated land' is defined in Part IIA of the Environmental Protection Act 1990, ref 8.11, which was inserted by Section 57 of the Environment Act 1995, ref 8.12, and came into force in England in 2000, as;

'any land which appears to the local authority in whose area it is situated to be in such a condition, by reason of substances in, on or under the land, that:

(a) significant harm is being caused or there is a significant possibility of such harm being caused; or

(b) pollution of controlled waters is being, or is likely to be, caused'.

A3.1.2 In Scotland, this has been amended by the Water Environment and Water Services (Scotland) Act 2003, ref 8.13, to '*significant pollution of the water environment is being caused or there is a significant possibility of such pollution being caused'*.

A3.1.3 The purpose of Part IIA was to help address the problems caused by historical contamination, with the voluntary remediation of such land encouraged without the use of the Act. The planning regime assists in this, with Planning Policy Statement 23: Planning and Pollution Control (PPS23), ref 8.14, published in 2004, setting out the minimum requirements for the remediation of land affected by contamination as '*after carrying out the development and commencement of its use, the land should not be capable of being determined as contaminated land under Part IIA of the EPA 1990*'.

A3.1.4 The UK guidance on the assessment of contaminated has developed as a direct result of the introduction of these two Acts. The technical guidance supporting the legislation was originally summarised in a number of key documents collectively known as the Contaminated Land Reports (CLRs), a proposed series of twelve documents. Seven were originally published in March 1994, four more were published in April 2002, while the final guidance document, CLR 11 was published in 2004. CLR7 to 10 were withdrawn in 2008, with CLR 9 and 10 effectively replaced by the Environment Agency in the form of Science Reports SR2, ref 8.15 and SR3, ref 8.16.

A3.1.5 CLR11 remains valid and sets out the framework of the investigation process, with the overall approach one of risk management, with risk given the definition of '*a combination of the probability or frequency, of occurrence of a defined hazard and the magnitude of the consequences of the occurrence*'. In establishing whether a site fulfils the statutory definition of 'contaminated land' it is necessary to identify whether the three essential elements of risk exist. These are defined as:

- A contaminant - a substance which is in, on or under the land and has the potential to cause harm or to cause pollution of controlled waters;
- A receptor - something which could be adversely affected by a contaminant, such as people, an ecological system, property or a water body; and
- A pathway – a route or means by which a receptor can be exposed to, or affected by, a contaminant.

A3.1.6 A *'pollutant linkage'* may be defined as the link between a contaminant *'source'* and a *'receptor'* by means of a *'pathway'*. There may be none, one or many pollutant linkages existing on a site, which may utilise the same or different sources, pathways and receptors, which may change over the passage of time.

A3.1.7 Each pollutant linkage that exists in respect of the land in question must fulfil one or more of the following criteria:

- significant harm is being caused to the receptor in the pollutant linkage,
- there is a significant possibility of significant harm being caused to that receptor,
- there is (significant) pollution of controlled waters (the water environment) which constitute the receptor, or
- pollution of controlled waters is likely to be caused
- (there is a significant possibility of such pollution being caused).

A3.1.8 A pollutant linkage indicates that all three elements have been identified. The site can only be defined as 'Contaminated Land' under Part IIA if a pollutant linkage exists and the criteria above are met.

A3.1.9 The main potential receptors include:

1) Humans – current site occupants, construction workers, future site users and neighbouring site users.

2) Controlled Waters – surface water and groundwater resources

3) Property – including buildings, crops, livestock and pets

4) Ecological systems – including current/future site and neighbouring vegetation

A3.1.10 The main potential pathways to be considered include:

a) Ingestion and/or inhalation.

b) Uptake of contaminants via cultivated vegetables.

c) Dermal contact

d) Migration through permeable strata

e) Drains or services

f) Direct contact with building materials and services

g) Fire and explosion

A3.2 ASSESSMENT METHODOLOGY

A3.2.1 The guidance proposes a four-stage assessment process for identifying potential pollutant linkages on a site. These stages are set out in the table below:

No.	Process	Description
1	Hazard Identification	Establishing contaminant sources, pathways and receptors (the conceptual model).
2	Hazard Assessment	Analysing the potential for unacceptable risks (what linkages may be present and what could be the effects?).
3	Risk Estimation	Trying to establish the magnitude and probability of the possible consequences (what degree of harm might result and to what receptors, and how likely is it).
4	Risk Evaluation	Deciding whether the risk is unacceptable.

A3.2.2 Stages 1 and 2 develop a *'conceptual model'* based upon information collated from desk based studies, and reconnaissance of the site (a walkover survey). The walkover survey should be conducted in general accordance with CLR 2. The formation of a conceptual model is an iterative process and as such, it should be updated and refined throughout each stage of the project to reflect any additional information obtained.

A3.2.3 The extent of the desk based research and enquiries to be conducted should be in general accordance with CLR 3. The information from these enquiries is presented in a preliminary risk assesment report with recommendations, if necessary, for further work based upon the conceptual model. In the absence of specific information on contamination anticipated to be encountered, specific DoE 'Industry Profiles' provide guidance on the nature of contaminants relating to a variety of industrial processes and should be used as the basis for determining which contaminants are more likely to be present on a site.

A3.2.4 If potential pollutant linkages are identified within the conceptual model, an intrusive ground investigation and report will be recommended. The investigation should be planned in general accordance with CLR 4, and BS10175. The number of exploratory holes and samples collected for analysis should be consistent with the size of the site and the level of risk envisaged. This will enable a generic quantitative risk assessment (GQRA) to be conducted, at which point the conceptual model can be updated and relevant pollutant linkages can be identified.

A3.2.5 A two-stage investigation may be more appropriate where time constraints are less of an issue. The first stage investigation may be conducted as an initial assessment for the presence of potential sources, with the second being more refined in order to delineate or further characterise any contamination or the physical properties of the site.

A3.3 RISK EVALUATION

A3.3.1 The risk evaluation is a qualitative method for interpreting the data from the hazard estimation stage. It involves the classification of the:

- magnitude of the potential 'consequence' (severity) of the risk occurring and:

- magnitude of the 'probability' (likelihood) of the risk occurring.

A3.3.2 These are defined in the following sections:

A3.4 CLASSIFICATION OF CONSEQUENCE

Classification	Definition	Examples
Severe	Short-term (acute) risk to human health likely to result in 'significant harm' as defined by the Environment Protection Act 1990, Part IIA. Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource. Catastrophic damage to buildings property. A short-term risk to a particular ecosystem, or organism forming part of such ecosystem (note: the definitions of ecological systems within the Draft Circular on Contaminated Land, DETR, 2000).	High Concentrations of cyanide on the surface of an informal recreation area. Major spillage of contaminants from site into controlled water. Explosion, causing building collapse can also equate to a short-term human health risk if buildings are occupied.
Medium	Chronic damage to Human Health ('significant harm' as defined in DETR, 2000). Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution). A significant change in a particular ecosystem, or organism forming part of such ecosystem, (note: the definitions of ecological systems within Draft Circular on Contaminated Land, DETR, 2000).	Concentrations of a contaminant from site exceed the generic, or site-specific assessment criteria. Leaching of contaminants from a site to a major or minor aquifer. Death of a species within a designated nature reserve.
Mild	Pollution of non-sensitive water resources. Significant damage to crops, buildings, structures and services ('significant harm' as defined in the *Draft Circular on Contaminated Land*, DETR 2000). Damage to sensitive buildings/ structures/services or the environment.	Pollution of non-classified ground water. Damage to building rendering it unsafe to occupy (eg foundation damage resulting in instability).
Minor	Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve. Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc). Easily repairable effects of damage to buildings, structures and services.	The presence of contaminants at such concentrations that protective equipment is required during site works. The loss of plants in landscaping scheme. Discoloration of concrete

A3.4.1 In theory, both severe and medium classification can result in death. The differential is that severe relates to short term risk while medium relates to long-term risk. Therefore, the classification of severe requires urgent action while medium may require urgent action but usually long term action would be sufficient.

A3.5 CLASSIFICATION OF PROBABILITY

Classification	Definition
High likelihood	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low likelihood	There is a pollution linkage and circumstances are possible under which an event could occur However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term
Unlikely	There is a pollution linkage but circumstances are such that it is improbable that an event would occur even in the very long term

A3.5.1 For the purposes of this preliminary risk assessment, any source of contamination that has been identified by professional judgement as potentially impacting on the site has been classified as being 'likely' to be present, unless proven otherwise by intrusive investigation.

A3.6 COMPARISON OF CONSEQUENCE AGAINST PROBABILITY

A3.6.1 These classifications are compared to indicate the risk presented by each pollutant linkage. Once the consequence and probability have been classified they can be used to produce a risk category as below:

		Consequence			
		Severe	**Medium**	**Mild**	**Minor**
Probability	High likelihood	Very high risk	High risk	Moderate risk	Moderate/low risk
	Likely	High risk	Moderate risk	Moderate/low risk	Low risk
	Low likelihood	Moderate risk	Moderate/low risk	Low risk	Very low risk
	Unlikely	Moderate/low risk	Low risk	Very low risk	Very low risk

A3.6.2 The action required for the classified risks are as follows:

Very high risk	There is a high probability that severe harm could a risk to a designated receptor from an identified hazard, OR, there is evidence that severe harm to a designated receptor is currently happening. This risk, if realised, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required
High risk	Harm is likely to arise to a designated receptor from an identified hazard. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term
Moderate risk	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term
Low risk	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very low risk	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

APPENDIX 4

ENVIROCHECK REPORT

IAN FARMER ASSOCIATES

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

Denbighshire

Published 1899

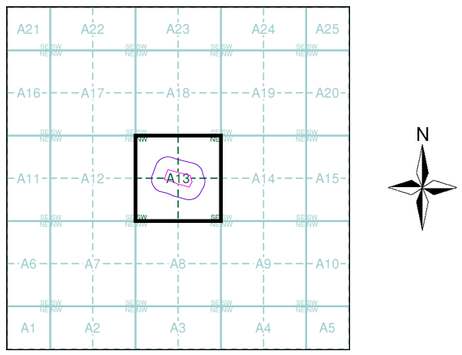

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:2,500

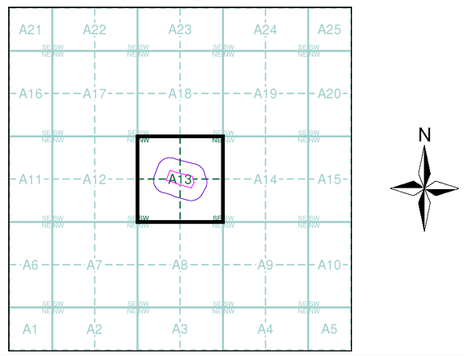

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Denbighshire

Published 1879

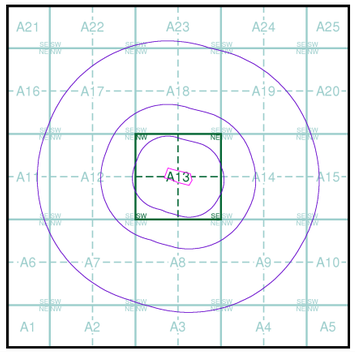

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 2000

Source map scale - 1:10,000

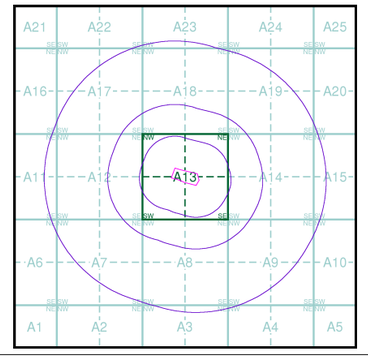

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2016

Source map scale - 1:10,000

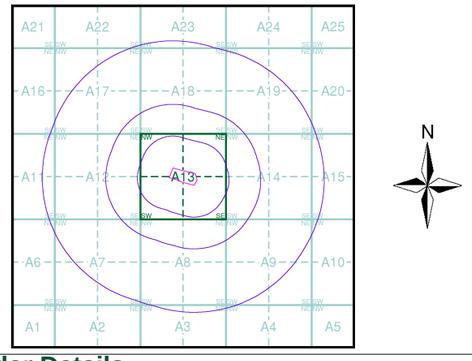

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Summary

Has the search report highlighted evidence or potential of		
1	Past underground coal mining	No
2	Present underground coal mining	No
3	Future underground coal mining	Yes
4	Mine entries	No
5	Coal mining geology	No
6	Past opencast coal mining	No
7	Present opencast coal mining	No
8	Future opencast coal mining	No
9	Coal mining subsidence	No
10	Mine gas	No
11	Hazards related to coal mining	No
12	Withdrawal of support	No
13	Working facilities order	No
14	Payments to owners of former copyhold land	No
15	Information from the Cheshire Brine Subsidence Compensation Board	No

For detailed findings, please go to page 4.

Detailed findings

1. Past underground coal mining

The property is not within a surface area that could be affected by past underground mining.

2. Present underground coal mining

The property is not within a surface area that could be affected by present underground mining.

3. Future underground coal mining

The property is not in an area where the Coal Authority has plans to grant a licence to remove coal using underground methods.

The property is not in an area where a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area likely to be affected from any planned future underground coal mining.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

4. Mine entries

There are no known coal mine entries within, or within 20 metres of, the boundary of the property.

5. Coal mining geology

The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.

6. Past opencast coal mining

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

7. Present opencast coal mining
The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

8. Future opencast coal mining
There are no licence requests outstanding to remove coal by opencast methods within 800 metres of the boundary.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

9. Coal mining subsidence
The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres, since 31st October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

10. Mine gas
The Coal Authority has no record of a mine gas emission requiring action.

11. Hazards related to coal mining
The property has not been subject to remedial works, by or on behalf of the Authority, under its Emergency Surface Hazard Call Out procedures.

12. Withdrawal of support
The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

13. Working facilities order
The property is not in an area where an order has been made, under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

14. Payments to owners of former copyhold land
The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

15. Information from the Cheshire Brine Subsidence Compensation Board

The property lies outside the Cheshire Brine Compensation District.

Additional remarks

Information provided by the Coal Authority in this report is compiled in response to the Law Society's Con29M Coal Mining and Brine Subsidence Claim enquiries. The said enquiries are protected by copyright owned by the Law Society of 113 Chancery Lane, London WC2A 1PL. Please note that Brine Subsidence Claim enquiries are only relevant for England and Wales. This report is prepared in accordance with the Law Society's Guidance Notes 2006, the User Guide 2006 and the Coal Authority and Cheshire Brine Board's Terms and Conditions applicable at the time the report was produced.
