18th March 2010.

To whom this may concern.

**Planning reference:-P20090449 Drilling of Appraisal Bore Hole, Part
Field East of Sun Lane.**

Welsh Assembly Government Ref:-H6955/A/10/2122444

Further to my original letter in approximately August 2009. We echo our original concerns for Composite Energy placing a site on the indicated area, and oppose it for the following reasons:-

- School children waiting for transport in the mornings and being dropped off in the evenings along the main road past St Paul's School and at the bottom of Fishers lane. This is the route that is proposed for many heavy vehicles to travel to and from the site.
- The extensive increase in traffic on already over busy lanes, namely from the main road to the proposed site.
- Upon initially writing in 2009, Fishers Lane was in a bad state of repair, following the harsh winter this road has become even worse showing large pot holes and crumbling road surfaces, this can only deteriorate with heavier and additional traffic.
- There are still no pavements, this was an issue I believe in rejecting the initial application. This has not changed in any way whatsoever, and even additional passing places for vehicles would not overcome the safety of the regular and large amount of dog walkers, horse riders and cyclists in the area. I believe it would increase the risk of significant harm to members of the public.
- Again the noise level within the area has not changed and this was a second reason I believe for rejecting the initial application.

We can only reiterate our initial concerns for the safety of our family as we have a school child that stands on the road waiting for a school bus, the local community as a whole and the increasing noise and inconvenience for residents should this application be accepted.

Upon seeing the site at Shoclach in 2009, we can only compare the site to 'looking like a space station'. It was clearly visible to see the lights from the Shoclach site from Wrexham Industrial Estate despite the site being

probably 10 miles away. We can hardly imagine what a site 400 – 500 metres away from our house would look and sound like, it just doesn't bare thinking about for us. This has just confirmed in our minds that we will oppose this application at every opportunity.

Yours faithfully
