14/05/2021

Dear Sir/Madam,

PROPOSAL: DEMOLITION OF EXISTING EXTENSION AND ERECTION OF TWO STOREY REAR EXTENSION AND SINGLE STOREY SIDE EXTENSION

LOCATION: ROSE HILL LODGE, ERBISTOCK, WREXHAM

Thank you for consulting Cyfoeth Naturiol Cymru / Natural Resources Wales about the above, which we received on 29/04/2021.

We have no objection to the proposed development as submitted and provide the following advice.

Protected Sites

Special Area of Conservation (SAC)

From the information provided, NRW consider that the proposals may affect the River Dee and Bala Lake Special Area of Conservation (SAC). The application is located within 65m of the SAC.

NRW have identified potential impact pathways to features of this site:

1. pollution

The above pathways may not result in an adverse effect if the following measures are implemented:

1. developer adheres to pollution prevention guidelines (please see advice to developer section below).

No assessment of likely significant effect under Regulation 63 of the Conservation of Habitats and Species Regulations 2017 has been undertaken by your authority or it has not been forwarded to NRW for consideration. Should you conclude that the proposed development is likely to have a significant effect on the European site, we look forward to being re-consulted. In the absence of this assessment, NRW cannot offer assurances that the proposals would not result in an adverse effect upon the SAC.

Site of Special Scientific Interest (SSSI)

NRW consider the proposals have the potential to impact upon the River Dee Site of Special Scientific Interest (SSSI). Providing the impact pathways referenced above for the SAC are adequately addressed, NRW consider the features of the SSSI will also be adequately safeguarded.

Protected Sites and Foul Drainage

We note the application site is within the catchment of the River Dee and Bala Lake Special Area of Conservation (SAC). As you are aware, on the 21st January 2021, we published an evidence package outlining phosphate levels for all river SACs across Wales. As part of this package, we issued a [Planning Position Statement](#), in which we advised that any proposed development that might increase the amount of phosphate within a river SAC catchment could lead to damaging effects to the SAC. Therefore, such proposals should be screened through a Habitats Regulations Assessment (HRA), to determine whether they are likely to have a significant effect on the SAC. We also issued [Interim Planning Advice](#), which gives specific advice in respect of foul drainage arrangements for new developments.

We note the application does not provide details on foul drainage and the property is not served by a mains sewer (it is unclear whether the extension would result in any additional sewage flow and at present, NRW hold no record of any discharge exemptions held for the property). As such, we refer you to our [Interim Planning Advice](#) and confirm that provided this guidance is followed and you are able to conclude that the development is not likely to have a significant effect on the SAC, we have no objection to the proposal. However, should you conclude that the proposed development is likely to have a significant effect on the SAC, please consult us on your Appropriate Assessment under Regulation 63 of the Conservation of Habitats and Species Regulations 2017 (as amended).

Protected Species

We note that there is no information about protected species with the application and, therefore, are assuming that your Authority has screened the application and concluded that there is not a reasonable likelihood of protected species being present.

Other Matters

Our comments above only relate specifically to matters included on our checklist, Development Planning Advisory Service: Consultation Topics (September 2018), which is

published on our [website](#). We have not considered potential effects on other matters and do not rule out the potential for the proposed development to affect other interests.

We advise the applicant that, in addition to planning permission, it is their responsibility to ensure they secure all other permits/consents/licences relevant to their development. Please refer to our [website](#) for further details.

Advice for the Developer

Works near Watercourse

Due to the proximity of the site to watercourses, all works at the site must be carried out in accordance with GPP5 and PPG6: 'Works in, near or over watercourses' and 'Working at construction and demolition sites' which are available on the following website: <http://www.netregs.org.uk/environmental-topics/pollution-prevention-guidelines-ppgs-and-replacement-series/guidance-for-pollution-prevention-gpps-full-list/>

Environmental Management

All works at the site must be carried out in accordance with PPG6: 'Working at construction and demolition sites' which are available on the following website:

<http://www.netregs.org.uk/environmental-topics/pollution-prevention-guidelines-ppgs-and-replacement-series/guidance-for-pollution-prevention-gpps-full-list/>

The activity of importing waste into the site for use as, for example hardcore, must be registered with Natural Resources Wales as an exempt/permittable activity under the Environmental Permitting Regulations 2016. The developer should contact Natural Resources Wales to discuss the necessity for an exemption/permit for any material imported to and exported from the site.

If during construction/excavation works any contaminated material is revealed, then the movement of such material either on or off site should be done in consultation with Natural Resources Wales. Any waste excavation material or building waste generated in the course of the development must be disposed of satisfactorily and in accordance with Section 34 of the Environmental Protection Act 1990. Carriers transporting waste from the site must be registered waste carriers and movement of any Hazardous Waste from the site must be accompanied by Hazardous waste consignment notes.

Waste produced during construction

Waste produced during the construction phase of your development must be dealt with appropriately and be in line with all relevant waste legislation including Duty of Care Regulations and Hazardous Waste Regulations. As part of your waste duty of care you must classify the waste produced:

- before it is collected, disposed of or recovered
- to identify the controls that apply to the movement of the waste

- to complete waste documents and records
- to identify suitably authorised waste management options
- to prevent harm to people and the environment.

Any waste removed from site will be subject to waste management controls. The links below provide information on how to classify waste and register as a waste carrier or hazardous waste producer:

<https://naturalresources.wales/permits-and-permissions/waste/?lang=en>

<https://naturalresources.wales/permits-and-permissions/waste/waste-permits/?lang=en>

Further guidance can be found on the GOV website here:

<https://www.gov.uk/managing-your-waste-an-overview/duty-of-care>

Foul Drainage

The developer/applicant should ensure that any existing septic tank has sufficient capacity to accommodate any increase in flows from the proposed development. The Applicant should note, it is a legal requirement to apply for an environmental permit or register an exemption with us. Septic tanks and small sewage treatment works may be registered as exempt from the requirement to obtain an environmental permit if certain criteria are met. Please note, should a permit be required, further information may be required as part of that application and the Applicant is therefore advised to hold pre-application discussions with our Permitting Team on 0300 065 3000, at the earliest opportunity, to try to ensure that there is no conflict between any planning permission granted and the permit requirements. If the Applicant already holds an exemption / permit, they should check whether the proposed increase in flows would require a further application to be made for a new / varied permit. It is important to note that a grant of planning permission does not guarantee that a permit will be granted, should a proposal be deemed to be unacceptable (either because of environmental risk or because upon further investigation, a connection to mains sewer was feasible). The Applicant should ensure that they have all the required permissions, consents, permits and any other approvals in place prior to commencement of works on the site.

More information, including a step by step guide to registering and the relevant application forms are available on our [website](#). Where private sewage treatment/disposal facilities are utilised, they must be installed and maintained in accordance with British Standard 6297 and Approved Document H of the Building Regulations. We also refer the Applicant to Guidance for Pollution Prevention 4 on the [NetRegs website](#), which provides further information.

If you have any queries on the above, please do not hesitate to contact us.

Yours faithfully,

Tristan Williams
