

Re: 373 Trevalyn Wood, Rossett - Condition 7: Arboricultural SupervisionIntroduction

We Know Services have been appointed to oversee development works and will liaise with Richard Horan and contractors during the construction phase in order to ensure compliance with the approved Arboricultural Method Statement.

Project Arboriculturalists

1. Nicola Wallbank Ph.D. B.Sc. (Hon)s MArborA – 0151 443 2308 / 07810053377
2. Jonathan Henderson B.Sc. (Hons) TechArborA – 07385375348

Site Supervision Programme

1. Pre-commencement Meeting to determine the works programme and ensure all contractors are aware of the arboricultural protection measures to be implemented.
2. Prior to the start of construction, all tree protection fencing, and ground protection will be checked to ensure that it is secure and fit for purpose prior to work commencing. Any defects will be reported to the client and remediated before being signed off by the project arboriculturalist.
3. Supervision of car park installation within the RPA of T1 and T2- The site manager will notify the project arboriculturalist at least 48 hours prior to works commencing to allow Nicola or Jonathan to attend site and implement a watching brief while the cellular confinement system is installed. Details can be found at Section 2.1 of the Arboricultural Method Statement.
4. Supervision of any hard-standing removal within the RPA which will follow the methodology detailed in Section 2.2 of the Arboricultural Method Statement.
5. Supervision of the hand excavation required for the fence posts to be installed within the RPA of T1 and T2.
6. During the above supervision the project arboriculturalist will monitor the size and density of tree roots encountered and make on-site recommendations according to the following findings:
 - No roots - continue without constraint
 - Minor roots (<10mm) - continue to monitor
 - Moderate roots (<25mm) - prune roots neatly

- Major roots (>25mm) - agree additional design, methodology or tree management measures. This will be discussed with the LPA in order to agree an acceptable way forward.
7. Once the operations that impact on the existing trees are complete the project arboriculturalist will monitor compliance with the protection measures through recurrent inspections of the site and will advise on any tree related matters that may arise.
