Arboricultural Legend

INDIVIDUAL TREE

INDICATIVE EXTENT OF GROUPED FEATURE

CATEGORY GRADE A
Trees of high quality

CATEGORY GRADE B
Trees of moderate quality

CATEGORY GRADE C
Trees of low quality

CATEGORY GRADE U
Trees unsuitable for retention

ROOT PROTECTION AREAS (RPA)

SITE BOUNDARY

GPS SITE TREES AS RECORDED ON TOPOGRAPHICAL SURVEY

TREE GRASSES

Tree canopies have been measured and plotted at their cardinal points for survey and preservation purposes.

ROOT PROTECTION AREA (RPA)

Root Protection Areas are calculated in accordance with BS5837:2012. The Root Protection Area (RPA) is a broad design tool indicating the tree area around a tree intended to control sufficient roots and covering volume to maintain the tree's viability and where protection of the roots and soil structure is to be treated as a priority. (Refer to main report for further details)

General Notes

1. The arboricultural survey is based on the supplied OSMM. This may contain inaccurate information.

2. Tree have been plotted with GPS device. The accuracy of the tree/feature location cannot be guaranteed.

3. All arrows on steps / ramps etc indicate an UP direction unless otherwise stated.

4. Contours are shown on soft detail areas only (where applicable) and annotated at the interval identified above. Hard detail areas may be contoured if specifically requested.

5. Site traffic or obstructions encountered at the time of the survey may have resulted in tree/thrubs features being omitted.

TREE CANDIDATES

Tree candidates have been measured and plotted at their cardinal points for clarity and presentation purposes.

ROOT PROTECTION AREAS (RPA)

Root Protection Areas are calculated in accordance with BS5822:2012. The method involves an estimate of the likely spread of roots indicating the perimeter area around a tree proposed to remain sufficient and strong volume to maintain the tree's stability and ensure protection of the roots and soil structure. It may be revised as a priority. (Details to be made available for further details).
