

Supplementary Information / Concerns

The Local Member and Community Council for the area and nearby residents have raised objections at the increase in traffic noise from the volume of traffic from HGV's using Holyhead Road and associated problems / impact of dust and fumes from the increase in volume in traffic. Queuing at the site entrance does cause concerns on occasions but the submission of a site Transportation Management Plan will help eliminate occasional queuing on the adjacent highway.

The application was deferred at the 4th March 2019 Planning Committee to consider an alternative means of access to the site. Whilst discussions have taken place with Kronospan no alternative means of access as of yet has been submitted. Kronospan should be looking to amend the proposal to provide an alternative access to address congestion on Holyhead Road and associated noise, dust and fumes or submit a new application.

The increase in cumulative noise on a daily / nightly basis is causing concerns and the Local Member considers it a public nuisance and the volume of traffic has also caused a deteriorating condition of the road costing the Council significant expenditure and collapsing and blocked drains. Noise and dust remain a significant concern of nearby residents and potential problems of more pollution next to a school route and concerns regarding health issues.

The Inspector is respectfully requested to dismiss the appeal.
