

REF: P 2018 0551

PLANNING APPLICATION FOR THE DEVELOPMENT OF AN OSB PRODUCTION FACILITY

Further to previous rejection I would like to make the following points:

1. The level of noise in recent weeks has been on the increase up to 90 decibels have been recorded by residents and expansion has increased levels not decreased and further development will only increase noise levels.
2. The levels of pollution the town is experiencing is on the increase and by allowing another production line this will increase these levels.
3. The infrastructure cannot cope with the level of traffic currently that enter the town for Kronospan, so an increase of another 200 lorries today will be impossible. The drains on the road are damaged on a regular basis and take ages to be repaired and also, there is an increase in pot holes again not repaired as the council do not have the budget to deal with.
4. The increase in air pollution from increased traffic, and the effects this will have on children in the local school, sports people who use the facilities at Chirk AAA grounds. Only last week the smell from the factory was causing a major problem from people trying to play sport and despite numerous complaints to the factory it continues.
5. The lack of ability for any noise/air pollution to be dealt with on the weekend by anyone and the damage it causes.
6. The concern of what resins that will be used in production and no comments being made, and if granted would this mean an increase in Formaldehyde being made on site.
7. Chirk is a town and not an industrial site and the increase in an already oversized factory would be a further detriment for the town and its residents.

Regards

Jane Wilson
