

FAO Sharon Holman

22/05/2019

Dear Sharon,

TOWN AND COUNTRY PLANNING ACT 1990
DEDDF CYNLLUNIO GWLAD A THREF 1990

BWRIAD / PROPOSAL: Residential development for 9no. detached dwellings with associated means of access and landscaping
LLEOLIAD / LOCATION: Land West of Eversley Court, Minera

Thank you for consulting Natural Resources Wales (NRW) about the above, which was received on 14/05/2019.

We recommend that you should only grant planning permission if you attach the following condition. This condition would address significant concerns that we have identified and we would not object provided you attach it to the planning permission.

Summary of Condition

Condition 1: EPS: External lighting/internal light spillage mitigation plan compliant with the provisions of the Institution of Lighting Professionals and Bat Conservation Trust: Guidance Note 08/18: Bats and Artificial Lighting in the UK

Protected Species

We note that the bat report submitted in support of the above application (Land at Eversley Ciourt, Minera, Ecological Survey Report) has identified potential that bats are present at the application site. From the information submitted, we consider that the proposed development represents a lower risk for bats, as defined in our guidance document '*Natural Resources Wales Approach to Bats and Planning (2015)*'. Bats and their breeding and resting places are protected under the Conservation of Habitats and Species Regulations 2017. We note section 4.3.1. that mature trees on site offer bat roosting features of 'moderate' suitability. The report states that these trees are to be maintained. However, it does state that if it is proposed that the trees are removed then further survey work will be required. We request that NRW are re-consulted should the applicant propose to remove the trees.

As this is a lower risk case for bats, we consider that the development is not likely to be detrimental to the maintenance of the population of the species concerned at a favourable conservation status in its natural range. However, we advise that the below condition should be attached to any planning permission for this scheme to ensure appropriate avoidance and mitigation measures. Provided those measures are implemented, we do not consider that the proposed development is likely to be detrimental to the maintenance of the population of the species concerned at a favourable conservation status in its natural range.

Condition 1: EPS: External lighting/internal light spillage mitigation plan compliant with the provisions of the Institution of Lighting Professionals and Bat Conservation Trust: Guidance Note 08/18: Bats and Artificial Lighting in the UK

Please consult us again if any further information shows that this is no longer a lower risk case.

NRW would refer the Local Authority to the Chief Planning Officer's letter dated 01 March 2018 which advises Local Planning Authorities to attach an informative regarding licence requirements to all consents and notices where European Protected Species are likely to be present on site.

Please do not hesitate to contact us if you require further information or clarification on any of the above.

Our comments above only relate specifically to matters that are listed in our 'Consultation Topics' document (September 2018) which is published on our website: (<https://cdn.naturalresources.wales/media/686847/dpas-consultation-topics-august-2018-eng.pdf?mode=pad&rnd=131819256840000000>). We have not considered potential effects on other matters and do not rule out the potential for the proposed development to affect other interests, including environmental interests of local importance

Advice to Applicant

Pollution Prevention

Due to the proximity of the site to watercourses, all works at the site must be carried out in accordance with GPP5 and PPG6: 'Works in, near or over watercourses' and 'Working at construction and demolition sites' which are available on the following website: <http://www.netregs.org.uk/environmental-topics/pollution-prevention-guidelines-ppgs-and-replacement-series/guidance-for-pollution-prevention-gpps-full-list/>

Waste produced during construction

Waste produced during the construction phase of your development must be dealt with appropriately and be in line with all relevant waste legislation including Duty of Care

Regulations and Hazardous Waste Regulations. As part of your waste duty of care you must classify the waste produced:

- before it is collected, disposed of or recovered
- to identify the controls that apply to the movement of the waste
- to complete waste documents and records
- to identify suitably authorised waste management options
- to prevent harm to people and the environment.

Any waste removed from site will be subject to waste management controls. The links below provide information on how to classify waste and register as a waste carrier or hazardous waste producer:

<https://naturalresources.wales/permits-and-permissions/waste/?lang=en>

<https://naturalresources.wales/permits-and-permissions/waste/waste-permits/?lang=en>

Further guidance can be found on the GOV website here:

<https://www.gov.uk/managing-your-waste-an-overview/duty-of-care>

Surface Water Drainage

We refer the developer to the Environment Agency (2017) 'Approach to groundwater protection' position statements which have been adopted by Natural Resources Wales. In particular the developer should be aware of the advice under Position Statement G13 (Sustainable drainage systems) which applies to this development.

The applicant should be advised that, in addition to planning permission, it is their responsibility to ensure that they secure all other permits/consents relevant to their development.

Yn gywir / Yours sincerely,

Daniel Davies
