Introduction

Further to the multi-phased investigation of the Former Gatewen Colliery site by numerous consultants and Coopers, and subsequent planning approval following reviews of reports and assessments, Coopers were commissioned by Bloor Homes to carryout the validation works of the placement of inert cover within the garden and soft landscaping areas of the development. This report details Coopers' validation of the construction of ground gas mitigation measures and placement of inert cover in garden areas of the Bloor Homes' Phase 2 area at the Bloor Homes development of the former Gatewen Colliery. This report is to be read in conjunction with some of the reports and correspondences listed below:

- Letter correspondence from Wrexham Borough Council, referenced SLI/P/2008/1066 & P/2002/0767, dated 28 January 2010.
- Coopers letter to Wrexham Borough Council, referenced 4763WBC100909L, dated 9 September 2010.
- Letter correspondence from Wrexham Borough Council to Coopers, referenced RP/P/2008/1066, dated 13 October 2010.
- E-mail correspondence from Coopers to Wrexham Borough Council, dated 14 April 2011.
- E-mail correspondence from Wrexham Borough Council, dated 21 April 2011.
- Coopers Site Investigation Report, referenced 4763si_P2, dated 1 May 2012.
- Letter correspondence from Wrexham Borough Council to Coopers, referenced HMP/P/2008/1066, dated 24 July 2012.
- E-mail correspondence from Coopers to Wrexham Borough Council, dated 16 November 2012.
- E-mail correspondence from Coopers to Wrexham Borough Council, dated 17 January 2013.
- Coopers Risk Assessment and Validation Demonstration Suitability For Inclusion of In-situ Subsoil Within Base of Proposed Garden Inert Cover, dated 19th June 2014.
- Letter correspondence from Wrexham Borough Council to Coopers, referenced P/2008/1066(phase2), dated 31 July 2014.
- E-mail correspondence from Coopers to Wrexham Council clarifying topsoil and subsoil sources utilised on Phase 2 area to date, dated 7th October 2014.
- Coopers' Build Phase Remediation and Validation Strategy For Plots 130-138 & 219-220, dated 12th January 2017.

General History and Validation Requirements

Prior to development, the site formerly comprised of Gatewen Colliery which was established between 1875 and 1877 and closed in 1932. More recently the site was utilised as a driver training centre and coach maintenance yards. Information regarding the use between colliery closure and recent use is limited. Prior to the establishment of the colliery the site was greenfield pasture with a limekiln present.

Site investigations were undertaken by Wardell Armstrong prior to a further investigation by Coopers in 2011. The reports from the original investigations was provided to Coopers before undertaking the further investigation. Findings from all investigations and recommendations are summarised within Coopers Site Investigation Report for Phase 2 and 3 referenced 4763si_P2, dated 1 May 2012.

It has been determined by the resulting assessments undertaken within the site investigation that the whole site is subject to full radon gas precaution measures to be constructed within the ground floor slab of each plot. No other sources of gas were assessed to be of any risk to the properties and residents on the development. The installation of radon precaution measures were inspected and validated by Building Control and was outside of Coopers' validation remit.

The majority of the madeground strata which consisted of general colliery spoil comprising of very sandy and weathered mudstone was analysed to be uncontaminated. Any contamination was limited to ash and clinkers which was found only locally and at depth. Shallow ash and clinkers had been observed in the southern portion of the Phase 2 area, designating it to require a 600mm inert cover with compact remediation break layer affecting Plots 77-93, 130-138, 141-170 and 219-220. The remainder of Phase 2 was concluded by an assessment detailed in the above report dated 19th June 2014 to only require validation of imported material.

As referenced by a Wrexham Borough Council Memorandum, referenced P/2008/1066, dated 16th February 2017. The Phase 2 portion of the development is split into 3 No. areas, 'Phase 2.1 (zone A)', 'South eastern Corner Phase 2' and 'Northern Section of Phase 2'. To clarify, the plots referenced within the zone A area largely occupy the south eastern section, so these can be combined and are both impacted by the shallow ash and clinker thus requiring 600mm inert cover. Plots 130-138 and 219-220 were located where Bloor Homes' site compound was present during the course of the Phase 2 and 3 construction, which was in a portion of the south western part of Phase 2. These plots were the last to be constructed and were situated on the periphery of where the ash and clinker was found and was anticipated to require 600mm inert cover. The northern area was subject to a soil inversion which upon completion was concluded that only confirmation of material used would be required. No inert cover depth would be required for this section.

We can confirm as requested in the Memorandum that Phase 1 entailed Plots 1-76 which have been completed. As acknowledged in the Memorandum we confirm that there are no remedial requirements for the Phase 3 area.

Topsoil and Subsoil Source and Analysis and Inert Cover Validation

Coopers validated the required inert cover of all listed plots within Phase 2 over 13 No. visits between 28th October 2013 and 26th July 2017. The last three visits on 23rd June and 26th July covered Plots 130-138 & 219-220 which was previously occupied by the Bloor Homes compound for the duration of the development of Phases 2 and 3. All validation visits and validation hole locations are detailed within the appended Validation Completion Plan, 4763/VCP, and photographs of each validation hole contained within Appendix 1 of this report.

Confirmation that the minimum depth of inert cover had been achieved was to be undertaken via either witnessing the open excavation prior to infilling or excavation of a validation hole through the backfilled inert cover to the base at a minimum spacing of 1 hole for every 3 gardens.

The strategy for testing of imported fills and topsoil consisted of three available options. The material could be tested at source, within a stockpile on site, or sampled in situ whilst validation of cover depth is completed. Coopers discussed the likely sources of inert material with Wrexham Borough Council (Contaminated Land) and agreed that all materials will be tested to a sample quota of 1 sample for 50 cubic metres of material, unless on a source specific basis where the material can be proven to be from a reputable/greenfield provenance, where a reduced quota may be adopted.

Below is a brief summary table of topsoil and subsoil sources utilised throughout Phase 2 followed by a more detailed explanation:

Table 1 – Summary of topsoil/subsoil source and usage location

Topsoil/Subsoil Source	Plots Used
Topsoil strip of greenfield Bloor Homes development in Drury, Flintshire.	Plots 163-170 front and rear Plots 155-159 front and rear
Topsoil – Unverified	Plots 149-152 front and rear Plots 153-154 rear only Plots 160-162 front and rear
Topsoil strip of greenfield Bloor Homes development in Kelsall, Cheshire.	Plots 77-84 rear only Plots 85-93 front and rear Plots 141-148 front and rear
Topsoil strip of greenfield Bloor Homes development in Broughton, Flintshire.	Plots 130-138 front and rear Plots 219-220 rear only
* Front of Plots 77-84 & 130-131 & 219-220 comprises hardstanding only	
Subsoil arisings from greenfield Bloor Homes development in Llandegla, Denbighshire.	Plots 77-93 Plots 141-170
Subsoil arisings from greenfield Bloor Homes development in Crewe, Cheshire.	Plots 130-138 & 219-220

Phase 2 - Plots 77-93, 141-170 (Phase 2.1 zone A and south eastern section)

Upon completion of the Phase 1 area at the end of 2012, the commencement of Phase 2 was delayed for commercial reasons until the second half of 2013 where Bloor Homes commissioned Coopers again to validate the inert cover. The materials used initially for Phase 2 consisted of the remainder of topsoil and subsoil stockpiles used to complete Phase 1, which were sourced from other Bloor Homes' greenfield developments in Drury, Flintshire (topsoil) and Llandegla, Denbighshire (subsoil) respectively. Both sites were greenfield and investigated by Coopers concluding the natural topsoil and subsoil were inert and suitable for re-use.

Coopers were satisfied with the placement of inert cover for all plots in Phase 2.1 zone A and south eastern section. Validation hole VH66 in the front of Plot 156 as noted in the 'validation completion plan' 4763/VCP was excavated in a narrow front verge showing 300mm of topsoil present overlying a dense granular sub-base of the adjacent driveways each side. At the time of this validation on 11 and 12 December 2013, the front gardens of Plots 153-155 were still in the process of being completed with subsoil placement in the larger front areas witnessed as shown in the photographs in Appendix 1 of this report. Coopers are satisfied considering the close proximity of driveway hardstanding and thickness of sub-base with 300mm of overlying inert topsoil that no risk is posed from any underlying strata containing ash and clinkers. The fronts of Plots 77-84 comprised solely of driveway hardstanding therefore no inert cover validation is feasible.

Allt yr Efail, Llandegla subsoil

Subsoil from Llandegla was previously discussed with Wrexham Council and summarised in an e-mail dated 7th October 2014 detailing its use on some of Phase 1 and Phase 2 of the development containing a link to Coopers' site investigation report. The transfer and validation of the subsoil is summarised in a separate short report which were drafted for plots on Phase 1 of the development and is appended to this report for reference to Plots 77-93 and 141-170. Approximately 1400m^3 was imported over the course of May to July 2011 for use in private residential gardens. Some of the transfer notes and haulage invoices provided by Bloor are appended to this report. This source was utilised for the majority of Phase 2 with exception of Plots 130-138 and 219-220.

Drury Lane, Drury topsoil

A similar short validation report detailing the topsoil from Drury was also produced which was drafted and appended with relevant validation reports for plots on Phase 1 of the development and is appended to this report for reference to Plots 155-159 and Plots 163-170 which this topsoil was used. Transfer notes of all 198 No. loads of the topsoil from Drury (approx.. 2000m^3) are appended with this document for reference. Approval for the use of the Drury topsoil source on the Phase 1 area was given by Wrexham Council in an e-mail dated 24 July 2012. Photographs of the remainder of the topsoil and subsoil stockpiles taken between the completion of Phase 1 and commencement of Phase 2 of the development are included in Appendix 1 of this report. Plots 158-159 and 168-170 were the first on Phase 2 to be validated on 28 October 2013.

Unverified topsoil

Once the Drury sourced topsoil was exhausted, Bloor Homes had proposed to import topsoil from another up and coming greenfield development in Kelsall, Cheshire. Delays in importing the topsoil meant Bloor Homes had to import an unverified source at short notice in order to maintain the build programme which was utilised in Plots 149-152 (front and rear), 153-154 (rear) and 160-162 (front and rear). In this instance samples were obtained for analysis in 2 No. visits, the first initially from stockpile and later in-situ from hand excavated validation holes VH77-VH79 in the front and rear gardens of Plots 149-152, denoted within our validation completion plan 4763/VCP and are detailed within the laboratory reports below:

- DETS Laboratory Report reference 14-99446, dated 27 February 2014
- Chemtest Laboratories Report reference 255482, dated 17 April 2014.

A total of 7 No. samples of the unverified topsoil was obtained from a total of approximately 200m^3 imported achieving at least 1 sample per 50m^3. The reports above show the topsoil to be suitable for use in private residential gardens and was utilised in plots until 7th April 2014.

Hallows Lane, Kelsall topsoil

Following the use of the unverified topsoil source, the topsoil utilised beyond April 2014 was sourced from Bloor Homes' greenfield site in Kelsall which had commenced and had been stripped. Approximately 2100m^3 of topsoil was transferred from the Kelsall development to Gatewen between 3rd and 5th March 2014. 104 No. topsoil transfer notes provided by Bloor Homes are appended with this document for reference. The Kelsall topsoil was reportedly utilised for most of the remainder of the Phase 2 area. Topsoil from Kelsall was previously discussed with Wrexham Council and summarised in an e-mail dated 7th October 2014 supplying site investigation information.

Phase 2 - Plots 139-140, 171-214 (Northern Section)

Beyond January 2015 the development progressed northwards into the Phase 2 portion not requiring inert cover as concluded within Coopers' Risk Assessment and Validation Demonstration Suitability For Inclusion of In-situ Subsoil Within Base of Proposed Garden Inert Cover, dated 19th June 2014. Here the remainder of the Llandegla subsoil and Kelsall topsoil was utilised throughout and Coopers are satisfied with the suitability of material used to provide a growing medium of the northern section plots. As detailed in the assessment, finished levels post earthworks show the ground to be at least 150mm allowing sufficient space for upfilling of materials to provide a suitable growing medium using the sources mentioned above.

Phase 2 - Plots 130-138, 219-220 (Former Compound – south western section)

The site compound location spanning the area of proposed Phase 2 Plots 130-138 remained during the course of the construction of the Phase 3 greenfield portion of the development. Following the completion of the Phase 3 area, the compound was dismantled and construction of the final plots in Phase 2 commenced in 2017. An update to the layout meant 2. No. further plots (Plots 219-220) were added to the plan. Coopers were requested to review the condition of

the area following the compound removal and investigate if the risk from ash and clinker initially determined in this area still remained. This assessment was detailed in the 'Build Phase Remediation and Validation Strategy For Plots 130-138 & 219-220', dated 12th January 2017 which concluded an inert cover requirement still remained for the rear gardens of Plots 130-133 and 219-220. Sufficient proposed raising of ground levels in excess of 600mm or absence of ash and clinker for the remainder of the gardens meant that no inert cover was essential for the other garden areas. The fronts of Plots 130-131 and 219-220 comprised solely of driveway hardstanding therefore no inert cover validation is feasible.

Coopers validated the former compound area over 3 No. visits between 23rd June and 26th July 2017 in accordance with the build phase remediation and validation strategy for these plots. Validation hole VH100 in the front of Plot 134 which was assessed to require 600mm of inert cover was found to be shallow. A second visit was undertaken on 26th July 2017 following the correction made to the garden which proved 600mm of topsoil present in validation hole VH107.

Coopers were satisfied that 600mm of inert cover was placed where it was assessed as required for these plots, and a suitable thickness of subsoil and/or topsoil was well in excess of the minimum 150mm for the remainder of the garden areas.

Parkers Road, Crewe subsoil

The subsoil utilised in the gardens of Plots 130-138 and 219-220 was imported from Bloor Homes' greenfield development off Parkers Road, Crewe, which following discussions was approved by Wrexham Council by e-mail on 7th April 2017. Approximately 140m^3 (14 No. loads) of subsoil was transferred between 10th April and 15th May 2017 as shown by the transfer notes appended with this report.

Site adjacent to A55 J36 Broughton topsoil

Topsoil for these plots were imported from Bloor Homes' greenfield development in Broughton, Flintshire. This site is also one which was investigated by Coopers and confirmed to be historically greenfield with topsoil and clay subsoil suitable for re-use. Approximately 140m^3 (14 No. loads) of topsoil was transferred between 11th April and 17th May 2017 as shown by the transfer notes appended with this report.

Conclusion

Overall Coopers are satisfied that a suitable growing medium and inert cover has been placed in accordance with the respective reports and assessments and that no further remedial works are required for this development.

Due to the large size of site investigation reports for the respective source sites detailed within this report and they are required for review, then they are available on request in the form of an e-mail link or CD which can be posted. Should the respective site investigation reports or any other information be required for review with respect to the validation works detailed in this report, then please contact Coopers on the information shown in the letterhead.

Documents appended:

- Appendix 1 – Photographs
- Appendix 2 – Laboratory Analysis
- Appendix 3 – Topsoil and subsoil source information
- Appendix 4 – Site Plan

Footnote: -

This Certificate is a record of Coopers' validation of gardens on the dates given within the aforementioned text. Coopers undertake validation when requested by the developer. Compliance or non-compliance of the remediation objectives or criteria is ascertained on those dates only. Coopers cannot be held responsible for any subsequent actions by third parties not under Coopers direct supervision, which may compromise the integrity or quality of the inert cover after the date of validation. In such cases it is deemed that it will be the responsibility of the developer, in liaison with the NHBC, to make good any damage or loss of quality of the inert cover layer or topsoil. It will then be at the discretion of the NHBC to decide whether any additional validation is warranted or required.

Photographs of Inert Cover Garden Validation

Dated: July 2012

To

26 July 2017

STOCKPILES

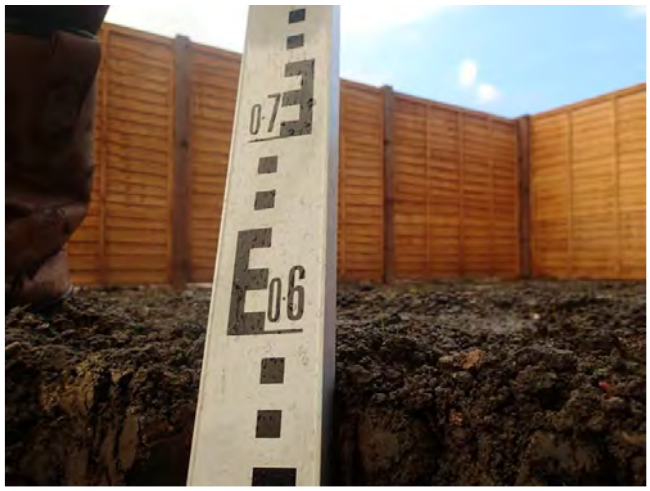

Photographs 1 & 2: Showing the remaining Llandegla sourced subsoil and Drury sourced topsoil stockpiles present within the Phase 2 area during our site visit on 12 December 2012 after completion of Phase 1. Photographs of the Drury topsoil stockpile being formed in July 2012 are shown in the 'Drury Certificate For Topsoil' appended with this document.

PLOT 170 REAR GARDEN

Photographs 3 & 4: Showing the validation hole location and depth of inert cover in the rear garden of Plot 170 with Plots 169 and 168 in the background. Photographs taken 28th October 2013.

Photograph 5: Showing the nature of inert cover within the validation hole in the rear garden of Plot 170. Photograph taken 28th October 2013.

PLOT 168 FRONT GARDEN

Photographs 6 & 7: Showing the validation hole location and depth of inert cover in the front garden of Plot 168 with Plots 169 and 170 in the background. Photographs taken 28th October 2013.

Photograph 8: Showing the nature of inert cover within the validation hole in the front garden of Plot 168. Photograph taken 28th October 2013.

PLOT 159 REAR GARDEN

Photographs 9 & 10: Showing the validation hole location and depth of inert cover in the rear garden of Plot 159. Photographs taken 28th October 2013.

Photograph 11: Showing the nature of inert cover within the validation hole in the rear garden of Plot 159. Photograph taken 28th October 2013.

PLOT 167 REAR GARDEN

Photographs 12 & 13: Showing the validation hole location and depth of inert cover in the rear garden of Plot 167. Photographs taken 22nd November 2013.

Photograph 14: Showing the nature of inert cover within the validation hole in the rear garden of Plot 167. Photograph taken 22nd November 2013.

PLOT 157 REAR GARDEN

Photographs 15 & 16: Showing the validation hole location and depth of inert cover in the rear garden of Plot 157. Photographs taken 22nd November 2013.

Photograph 17: Showing the nature of inert cover within the validation hole in the rear garden of Plot 157. Photograph taken 22nd November 2013.

PLOT 155 FRONT GARDEN

Photograph 18: Showing the progressive construction of a typical front garden prior to placement of topsoil in the front of Plot 15. Photograph taken 12th December 2013.

PLOT 155 FRONT GARDEN

Photographs 19 & 20: Showing the validation hole location and 300mm depth of inert cover in the narrow front garden section of Plot 155 where depth is restricted by angle of repose of adjacent driveway sub-base. Photographs taken 12th December 2013.

Photograph 21: Showing the nature of inert cover within the validation hole in the front garden of Plot 155 and the exposed dense granular sub-base. Photograph taken 12th December 2013.

PLOT 156 REAR GARDEN

Photographs 22 & 23: Showing the validation hole location and depth of inert cover in the rear garden of Plot 156. Photographs taken 12th December 2013.

Photograph 24: Showing the nature of inert cover within the validation hole in the rear garden of Plot 156. Photograph taken 12th December 2013.

PLOT 163 REAR GARDEN

Photographs 25 & 26: Showing the validation hole location and depth of inert cover in the rear garden of Plot 163. Photographs taken 12th December 2013.

Photograph 27: Showing the nature of inert cover within the validation hole in the rear garden of Plot 163. Photograph taken 12th December 2013.

PLOT 165 REAR GARDEN

Photographs 28 & 29: Showing the validation hole location and depth of inert cover in the rear garden of Plot 165. Photographs taken 12th December 2013.

Photograph 30: Showing the nature of inert cover within the validation hole in the rear garden of Plot 165. Photograph taken 12th December 2013.

PLOT 163 FRONT GARDEN

Photographs 31 & 32: Showing the validation hole location and depth of inert cover in the front garden of Plot 163. Photographs taken 12th December 2013.

Photograph 33: Showing the nature of inert cover within the validation hole in the front garden of Plot 163. Photograph taken 12th December 2013.

PLOT 166 FRONT GARDEN

Photographs 34 & 35: Showing the validation hole location and depth of inert cover in the front garden of Plot 166. Photographs taken 12th December 2013.

Photograph 36: Showing the nature of inert cover within the validation hole in the front garden of Plot 166. Photograph taken 12th December 2013.

PLOT 154 REAR GARDEN

Photographs 37 & 38: Showing the validation hole location and depth of inert cover in the rear garden of Plot 154. Photographs taken 15th January 2014.

Photograph 39: Showing the nature of inert cover within the validation hole in the rear garden of Plot 154. Photograph taken 15th January 2014.

PLOT 161 FRONT GARDEN

Photographs 40 & 41: Showing the validation hole location and depth of inert cover in the front garden of Plot 161. Photographs taken 15th January 2014.

Photograph 42: Showing the nature of inert cover within the validation hole in the front garden of Plot 161. Photograph taken 15th January 2014.

PLOT 160 REAR GARDEN

Photographs 43 & 44: Showing the validation hole location and depth of inert cover in the rear garden of Plot 160. Photographs taken 15th January 2014.

Photograph 45: Showing the nature of inert cover within the validation hole in the rear garden of Plot 160. Photograph taken 15th Janaury 2014.

PLOT 152 REAR GARDEN

Photographs 46 & 47: Showing the validation hole location and depth of inert cover in the rear garden of Plot 152. Photographs taken 7th April 2014.

Photograph 48: Showing the nature of inert cover within the validation hole in the rear garden of Plot 160. Photograph taken 7th April 2014.

PLOT 149 REAR GARDEN

Photographs 49 & 50: Showing the validation hole location and depth of inert cover in the rear garden of Plot 149. Photographs taken 7th April 2014.

Photograph 51: Showing the nature of inert cover within the validation hole in the rear garden of Plot 149. Photograph taken 7th April 2014.

PLOT 150 FRONT GARDEN

Photographs 52 & 53: Showing the validation hole location and depth of inert cover in the front garden of Plot 150. Photographs taken 7th April 2014.

Photograph 54: Showing the nature of inert cover within the validation hole in the front garden of Plot 150. Photograph taken 7th April 2014.

PLOT 77 REAR GARDEN

Photographs 55 & 56: Showing the validation hole location in the rear garden of Plot 77. Photographs taken 16th May 2014.

Photograph 57: Showing the depth of inert cover within the validation hole in the rear garden of Plot 77. Photograph taken 16th May 2014.

CERTIFICATE FOR IMPORTED CLAY

Developer	Bloor Homes
Source Location	Allt-yr-Efail, Pen-y-Stryt Farm, Llandegla, Wrexham
Supplied by:	Focus Environmental
Sampled at:	Gatewen Road, Wrexham
Date of Inspection:	27 May 2011

This is to certify that the imported topsoil is within the Coopers generic criteria as suitable for use in private residential gardens with plant uptake.

Source Location and Stockpile Control:

The topsoil is sourced from a "*greenfield*" source, currently being developed by Bloor Homes at Allt-yr-Efail, Pen-y-Stryt Farm, Llandegla, Wrexham. The nature of the source was verified by inspection of the first edition historical map (refer to Figure 2), 2008 edition map (refer to Figure 1) as well as recent satellite/aerial photography confirming the site has remained undeveloped for over 140 years. A site investigation was carried out by Coopers in 2008 and found all of the natural clay material to be suitable for use within residential gardens. The excess clay was generated from foundation excavations and delivered to the Bloor Homes' Gatewen Road Development for use as subsoil within front and rear gardens.

Figure 1: Showing aerial photography of the area where clay fill was sourced, Allt-yr-Efail, Pen-y-Stryt Farm, Llandegla, Wrexham*. Photograph obtained from internet searches.*

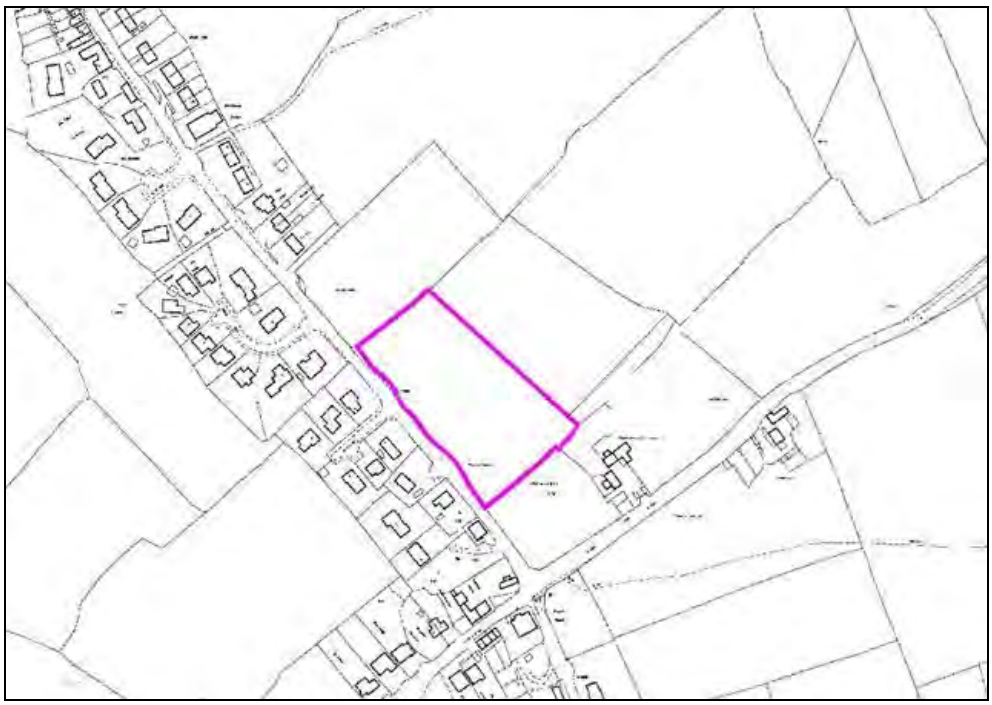

Figure 3: 2008 Edition Historical Ordnance Survey Map showing no development at that time. (Crown License No. AL 100005579).

Coopers Tier 1 Risk Assessment Screening Values

All inert fill materials shall be in accordance with the thresholds below derived from the CLEA 1.06 Risk Assessment Model:

Compound/Element	Soil Screening Value (mg/kg)						
	Small Terrace	Med/Large Terrace	Semi-detached	Detached	Phytotoxic pH <6	Phytotoxic pH 6-7	Phytotoxic pH >7
Arsenic	32.4				N/A		
Beryllium	51				N/A		
Boron	291 (2)*				N/A		
Cadmium	11				N/A		
Copper	2330				100	135	200
Chromium (III)	3000				N/A		
Chromium (VI)	4.3				N/A		
Lead	450**				N/A		
Mercury (methyl)	7.4				N/A		
Mercury (inorganic)	169				N/A		
Nickel	127				60	75	110
Selenium	351				N/A		
Vanadium	79				N/A		
Zinc	3750				200	200	300
Benzo(a)pyrene	0.83				N/A		
Dibenzo(ah)anthracene	0.76				N/A		
Fluorene	163				N/A		
Naphthalene	1.54	1.71	1.70	1.97	N/A		
Phenol	184	207	206	224	N/A		

Generated: October 2009 using CLEA 1.06 risk assessment model.

Remarks:

- *The soil organic matter has been assumed to be 1% as this is the most conservative value for organic compounds. Inorganic compounds unaffected by this parameter.*
- *Silty clay strata appears to prove more conservative threshold values for metals, semi-metals and several PAH compounds and therefore this scenario was used when inputting data into the CLEA model to determine the threshold values for these compounds.*
- *Sandy loam strata appears to prove more conservative threshold values for phenol and naphthalene. Therefore this scenario was used when inputting data into the CLEA model to determine the threshold values for these compounds.*
- **Boron is a risk to groundwater and is not hazardous to human health. The threshold within the brackets represents the ecological threshold for water soluble boron, and should be adopted as the primary risk driver The compound comes under the Water Framework Directive and its threshold to groundwater within the brackets is referenced from the Environment Agency's Environmental Quality Standards.*
- *Chromium is considered hazardous in the hexavalent form and when total chromium is encountered above the threshold value for chromium (VI), speciation should be completed.*
- ***Lead thresholds will be modified to follow the CLEA 1.06 system rather than the blood lead methodology, however until baseline data has been published, the blood lead threshold of 450mg/kg applicable to CLR will be adopted.*
- *Cyanide should not be present within significant quantities, and where encountered should be speciated to determine what form the cyanide is present in.*
- *For the BTEX compounds and phenol, the groundwater risk will require assessing as these are based only with regards to human health.*
- *All imported strata must be free of deleterious odour and should not include demolition/construction wastes within garden areas. The fills must be clean of construction rubble which may be removed by the occupant. As a guide, infrequent small fragments of brick and concrete may be incorporated within the fill for garden areas. Large fragments/oversized blocks may be removed by the resident during occupation, hence compromising the integrity of the inert cover.*

Chemical Analysis and Assessment

The excess clay from foundation excavations was delivered to Bloor Homes' Gatewen Road development, Wrexham and stockpiled on site. The stockpile was placed on a Visqueen membrane and fenced off to prevent any soil mixing. The stockpile was also signposted as "Inert Material" as a further precaution to prevent any mixing.

Coopers attended the Gatewen Road development on 27 May 2011 to sample the stockpile that had been created. Coopers approximated the volume of clay to be 1400m³ so 8 No. samples were taken to meet the sampling quota of 1 per 200m³. Samples were taken at depth within the stockpile to prove it's constancy and no foreign inclusions were noted during the excavations. Refer to samples AG08785 to AG08792 within Chemtest Laboratory Test Report 136675 dated 8 June 2011 for the clay samples. The analysis shows the material to be suitable for use within front and rear gardens.

Stockpile Sampling – 9 June 2011

Photographs 1 and 2: Showing the 1500m³ imported clay stockpile fully secured and clearly sign posted during sampling on 27 May 2011

Photograph 3: Showing the samples being taken at depth within the clay stockpile. Photograph taken on 27 May 2011.

Photographs 4 and 5: Showing the consistency of the clay within the stockpile with no foreign inclusions such as brick. Photograph taken on 27 May 2011.

Dear M Roberts

Test Report Number **136675**
Your Project Reference **4763 - Gatewen Colliery, New Broughton, Wrexham - P/O 5242**

Please find enclosed the results of analysis for the samples received 31 May 2011.

All soil samples will be retained for a period of one month and all water samples will be retained for 7 days following the date of the test report. Should you require an extended retention period then please detail your requirements in an email to customerservices@chemtest.co.uk. Please be aware that charges may be applicable for extended sample storage.

If you require any further assistance, please do not hesitate to contact the Customer Services team.

Yours sincerely

Authorised Signatory

CERTIFICATE FOR TOPSOIL

Developer	Bloor Homes
Source Location	Drury Lane, Drury
Delivered to:	Gatewen Road, New Broughton, Wrexham

This is to certify that the imported topsoil is within the Coopers generic criteria as suitable for use in private residential gardens with plant uptake.

Source Location and Stockpile Control:

The topsoil is sourced from a "*greenfield*" source, a new Bloor Homes Development on Drury Lane in the village of Drury, Flintshire (refer to Figures 1 and 5). The nature of the source was verified by inspection of the first edition historical map (refer to Figure 2), 1912 edition map (refer to Figure 3) and1992 edition map (refer to Figure 4), as well as recent satellite/aerial photography confirming the site has remained undeveloped for over 140 years. The only change to the site area was the construction of a small track running through the site to access an adjacent property to the west. The topsoil was stripped and stockpiled at the source location and verified as suitable for use prior to transportation to Bloor Homes' Gatewen Road Development. Coopers visual assessment of the topsoil confirmed the material was within the textural classification as topsoil in accordance with BS3882 (2007).

Figure 1: Showing aerial photography of the area where topsoil was sourced, adjacent to Drury Lane, Drury. Photograph obtained from internet searches.

Coopers Tier 1 Risk Assessment Screening Values

All inert fill materials shall be in accordance with the thresholds below derived from the CLEA 1.06 Risk Assessment Model:

Compound/Element	Soil Screening Value (mg/kg)						
	Small Terrace	Med/Large Terrace	Semi-detached	Detached	Phytotoxic pH <6	Phytotoxic pH 6-7	Phytotoxic pH >7
Arsenic	32.4				N/A		
Beryllium	51				N/A		
Boron	291 (2)*				N/A		
Cadmium	11				N/A		
Copper	2330				100	135	200
Chromium (III)	3000				N/A		
Chromium (VI)	4.3				N/A		
Lead	450**				N/A		
Mercury (methyl)	7.4				N/A		
Mercury (inorganic)	169				N/A		
Nickel	127				60	75	110
Selenium	351				N/A		
Vanadium	79				N/A		
Zinc	3750				200	200	300
Benzo(a)pyrene	0.83				N/A		
Dibenzo(ah)anthracene	0.76				N/A		
Fluorene	163				N/A		
Naphthalene	1.54	1.71	1.70	1.97	N/A		
Phenol	184	207	206	224	N/A		

Generated: October 2009 using CLEA 1.06 risk assessment model.

Remarks:

- *The soil organic matter has been assumed to be 1% as this is the most conservative value for organic compounds. Inorganic compounds unaffected by this parameter.*
- *Silty clay strata appears to prove more conservative threshold values for metals, semi-metals and several PAH compounds and therefore this scenario was used when inputting data into the CLEA model to determine the threshold values for these compounds.*
- *Sandy loam strata appears to prove more conservative threshold values for phenol and naphthalene. Therefore this scenario was used when inputting data into the CLEA model to determine the threshold values for these compounds.*
- **Boron is a risk to groundwater and is not hazardous to human health. The threshold within the brackets represents the ecological threshold for water soluble boron, and should be adopted as the primary risk driver The compound comes under the Water Framework Directive and its threshold to groundwater within the brackets is referenced from the Environment Agency's Environmental Quality Standards.*
- *Chromium is considered hazardous in the hexavalent form and when total chromium is encountered above the threshold value for chromium (VI), speciation should be completed.*
- ***Lead thresholds will be modified to follow the CLEA 1.06 system rather than the blood lead methodology, however until baseline data has been published, the blood lead threshold of 450mg/kg applicable to CLR will be adopted.*
- *Cyanide should not be present within significant quantities, and where encountered should be speciated to determine what form the cyanide is present in.*
- *For the BTEX compounds and phenol, the groundwater risk will require assessing as these are based only with regards to human health.*
- *All imported strata must be free of deleterious odour and should not include demolition/construction wastes within garden areas. The fills must be clean of construction rubble which may be removed by the occupant. As a guide, infrequent small fragments of brick and concrete may be incorporated within the fill for garden areas. Large fragments/oversized blocks may be removed by the resident during occupation, hence compromising the integrity of the inert cover.*

Chemical Analysis and Assessment

Coopers undertook the site investigation of the source site for Bloor Homes on 10 March 2010 prior to development (refer to Photograph 1). Topsoil was recorded across the site to a maximum depth of 0.5m, underlying this topsoil was boulder clay with rock head also present in most areas. A total of 5 No. samples were issued to Chemtest for chemical analysis and are detailed within Chemtest Report No. 111264, dated 6 April 2010. Sample references AE78031, AE78035, AE78038, AE78039 and AE78040 represent these topsoil samples and confirm that the topsoil is suitable for retention or direct transfer to use within residential gardens areas. The analysis also shows that the underlying clay and small areas of madeground are suitable for use within gardens, with no samples encountering any elevations.

The topsoil was stripped by site and delivered to the Bloor Homes Development at Gatewen Road. A total of 2000m³ was delivered to site using 3 No. wagons that were only utilised for the transfer (Coopers are in possession of the 198No. delivery tickets if required). A total of 2 No. stockpiles were constructed on site and secured with fencing from the active works on site in an area for inert materials. 1 No. stockpile was constructed over hardstanding and the second stockpile over madeground, a membrane was placed beneath this second stockpile to prevent any cross mixing with loose material beneath. Coopers attended site on 27 June 2012 during the transfer to witness the first stockpile completed and the second stockpile being constructed (refer to Photographs 2 and 3). Coopers returned on 10 July 2012 to inspect the second stockpile once the transfer was complete (refer to Photograph 4). Coopers will be monitoring the stockpile condition and status during validation visits to Gatewen Road and supplying the information within subsequent validation certificates.

Site Investigation – 10 March 2010

Photograph 1: Showing the source at Drury Lane during the site investigation carried out by Coopers, looking north on 10 March 2010.

During Transfer – 27 June 2012

Photograph 2: Showing the 1st stockpile completed over hardstanding, photograph taken during transfer on 27 June 2012.

Photograph 3: Showing the 2nd stockpile being constructed over a geotextile membrane, photograph taken during transfer on 27 June 2012.

Transfer Complete – 10 July 2012

Photograph 4: Showing the 2nd stockpile being completed over a geotextile membrane, photograph after transfer on 10 July 2012.

Dear Dan King

Test Report Number **111264**
Your Project Reference **Drury Lane, Drury - 5149 (P/O 4960)**

Please find enclosed the results of analysis for the samples received 17 March 2010.

All soil samples will be retained for a period of one month and all water samples will be retained for 7 days following the date of the test report. Should you require an extended retention period then please detail your requirements in an email to customerservices@chemtest.co.uk. Please be aware that charges may be applicable for extended sample storage.

If you require any further assistance, please do not hesitate to contact the Customer Services team.

Yours sincerely

Authorised Signatory

Notes to accompany report:

- *The sign < means 'less than'*
- *Tests marked 'U' hold UKAS accreditation*
- *Tests marked 'M' hold MCertS (and UKAS) accreditation*
- *Tests marked 'N' do not currently hold UKAS accreditation*
- *Tests marked 'S' were subcontracted to an approved laboratory*
- *n/e means 'not evaluated'*
- *i/s means 'insufficient sample'*
- *u/s means 'unsuitable sample'*
- *Comments or interpretations are beyond the scope of UKAS accreditation*
- *The results relate only to the items tested*

Containers Received & Deviating Samples

Lab No	Sample ID	Date Sampled	Containers Received	Holding time exceeded for tests	Inappropriate container for tests
610285	TS1 SOIL	18/02/14	PG		
610286	TS2 SOIL	18/02/14	PG		
610287	TS3 SOIL	18/02/14	PG		
610288	TS4 SOIL	18/02/14	PG		

Key: P-Plastic G-Bag

DETS cannot be held responsible for the integrity of samples received whereby the laboratory did not undertake the sampling. In this instance samples received may be deviating. Deviating Sample criteria are based on British and International standards and laboratory trials in conjunction with the UKAS note 'Guidance on Deviating Samples'. All samples received are listed above. However, those samples that have additional comments in relation to hold time and/or inappropriate containers are deviating due to the reasons stated. This means that the analysis is accredited where applicable, but results may be compromised due to sample deviations. If no sampled date (soils) or date+time (waters) has been supplied then samples are deviating. However, if you are able to supply a sampled date (and time for waters) this will prevent samples being reported as deviating where specific hold times are not exceeded and where the container supplied is suitable.

Soil Analysis Notes

Inorganic soil analysis was carried out on a dried sample, crushed to pass a 425µm sieve, in accordance with BS1377.

Organic soil analysis was carried out on an 'as received' sample. Organics results are corrected for moisture and expressed on a dry weight basis.

The Loss on Drying, used to express organics analysis on an air dried basis, is carried out at a temperature of 28°C +/-2°C.

Disposal

From the issue date of this test certificate, samples will be held for the following times prior to disposal :-

Soils - 1 month, Liquids - 2 weeks, Asbestos (test portion) - 6 months

FAO D. Roberts
17 April 2014

Dear D. Roberts

Test Report Number **255482**

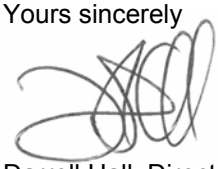

Your Project Reference **4763 (P/O 6223) - Gatewen Colliery, New Broughton, Wrexham**

Please find enclosed the results of analysis for the samples received 9 April 2014.

All soil samples will be retained for a period of one month and all water samples will be retained for 7 days following the date of the test report. Should you require an extended retention period then please detail your requirements in an email to customerservices@chemtest.co.uk. Please be aware that charges may be applicable for extended sample storage.

If you require any further assistance, please do not hesitate to contact the Customer Services team.

Yours sincerely

Darrell Hall, Director

UKAS TESTING
2183

Notes to accompany report:

- *The sign < means 'less than'*
- *Tests marked 'U' hold UKAS accreditation*
- *Tests marked 'M' hold MCertS (and UKAS) accreditation*
- *Tests marked 'N' do not currently hold UKAS accreditation*
- *Tests marked 'S' were subcontracted to an approved laboratory*
- *n/e means 'not evaluated'*
- *i/s means 'insufficient sample'*
- *u/s means 'unsuitable sample'*
- *Comments or interpretations are beyond the scope of UKAS accreditation*
- *The results relate only to the items tested*
- *All results are expressed on a dry weight basis*
- *The following tests were analysed on samples as received and the results subsequently corrected to a dry weight basis TPH, BTEX, VOCs, SVOCs, PCBs, phenols*
- *For all other tests the samples were dried at < 37°C prior to analysis*
- *Uncertainties of measurement for the determinands tested are available upon request*
- *None of the test results included in this report have been recovery corrected*
