

Table S2.3 Permitted waste types for use in the construction of bunds and restoration	
Maximum quantity	50,000 tonnes per annum
Waste code	Description
19 12	wastes from the mechanical treatment of waste (for example sorting, crushing, compacting, pelletising) not otherwise specified
19 12 09	minerals (for example sand, stones)

Schedule 3 – Emissions and monitoring

Table S3.1 Leachate level limits and monitoring requirements

Monitoring point reference/ Description	Limit	Monitoring frequency	Monitoring method
LPC1 – LPC8 LMP1.1, 2.1, 3.1, 3.2, 4.1, 4.2, 5.1, 5.2, 6.1, 6.2, 7.1, 7.2, 8.1 and 8.2	0.3 m above cell base	Monthly	In accordance with Environment Agency document LFTGN02 'Guidance on Monitoring of Landfill Leachate, Groundwater and Surface Water'

Table S3.2 Point source emissions to water (other than sewer) – emission limits and monitoring requirements

Emission point Ref. & Location	Parameter	Source	Limit (incl unit)	Reference Period	Monitoring Frequency	Monitoring Standard or Method
SWMP1, SWMP2, SW3, SWMQP1 On Plan HRA1 Rev1	Suspended Solids	Clean surface water	50 mg/l	Spot Sample	Monthly	In accordance with Environment Agency document LFTGN02 'Guidance on Monitoring of Landfill Leachate, Groundwater and Surface Water'
	pH		>5 and <9 pH units	Field and Spot		
	BOD		20mg/l	Spot sample		
	NH4		20mg/l	Spot sample		

Table S3.3 Trigger levels for emissions into groundwater and monitoring requirements

Monitoring point reference	Parameter	Limit (including unit)	Reference Period	Monitoring frequency	Monitoring standard or method
GBH2	Ammoniacal Nitrogen	1.13mg/l	Spot sample	Quarterly	In accordance with Environment Agency document LFTGN02 'Guidance on Monitoring of Landfill Leachate, Groundwater and Surface Water'
	Chloride	57.00mg/l			
	Cadmium	0.0011mg/l			
	Copper	0.017mg/l			
	Lead	0.014mg/l			
	Zinc	0.065mg/l			
	Napthalene	0.0001mg/l			
	Toluene	0.0001mg/l			
	Trichloroethene	0.0001mg/l			
	PCB (Total Congeners)	0.004µg/l			
GBH3	Ammoniacal Nitrogen	1.40mg/l	Spot Sample	Quarterly	In accordance with Environment Agency document LFTGN02 'Guidance on Monitoring of Landfill Leachate, Groundwater and Surface Water'
	Chloride	122mg/l			
	Cadmium	0.0011mg/l			

Table S3.3 Trigger levels for emissions into groundwater and monitoring requirements

Monitoring point reference	Parameter	Limit (including unit)	Reference Period	Monitoring frequency	Monitoring standard or method
	Copper	0.019mg/l			
	Lead	0.14mg/l			
	Zinc	0.091mg/l			
	Napthalene	0.001mg/l			
	Toluene	0.001mg/l			
	Trichloroethene	0.001mg/l			
	PCB (Total Congeners)	0.004µg/l			
GBH4	Ammoniacal Nitrogen	1.18mg/l	Spot Sample	Quarterly	
	Chloride	149mg/l			
	Cadmium	0.0002mg/l			
	Copper	0.020mg/l			
	Lead	0.16mg/l			
	Zinc	0.036mg/l			
	Napthalene	0.001mg/l			
	Toluene	0.001mg/l			
	Trichloroethene	0.001mg/l			
	PCB (Total Congeners)	0.004µg/l			

Table S3.4 Landfill gas in external monitoring boreholes – limits and monitoring requirements

Table 6.11 Landfill gas external monitoring service limits and monitoring requirements				
Monitoring point Ref. /description	Parameter	Limit (including units)	Monitoring frequency	Monitoring standard or method
GBH1 to GBH6	Methane	1 %v/v	Monthly	In accordance with Environment Agency document LFTGN03 Guidance on management of landfill gas
	Oxygen	no limit		
	Atmospheric pressure	no limit		
	Differential Pressure	no limit		
	Temperature	no limit		
	Meteorological data	No limit		
GHB1	Carbon Dioxide	2.0 %v/v	Monthly	
GBH2		2.0%v/v		
GHB3		3.7%v/v		
GBH4		5.3%v/v		
GBH5		2.3%v/v		
GBH6		5.8%v/v		

Table S3.5 Landfill gas from capped surfaces – limits and monitoring requirements

Monitoring point Ref. /description	Parameter	Limit (including unit)	Monitoring frequency	Monitoring Standard or method
Permanently capped zone	Average methane flux and total methane emission	Average zone emission rate of 0.001 mg/m ² /second	Within 1 year of completion of capping and annually thereafter as per LFTGN 07	As per LFTGN 07 v2 2010
Temporarily capped zone	Average methane flux and total methane emission	Average zone emission rate of 0.1 mg/m ² /second	Annually	As per LFTGN 07 v2 2010

Table S3.6 Landfill gas – other monitoring requirements

Emission point reference or source or description of point of measurement	Parameter	Limit (including units)	Monitoring frequency	Monitoring standard or method	Other specifications
In waste monitoring boreholes LPC1 – LPC8, LMP1.1, 2.1, 3.1, 3.2, 4.1, 4.2, 5.1, 5.2, 6.1, 6.2, 7.1, 7.2, 8.1 and 8.2	Methane	1.4%v/v	Monthly	In accordance with Environment Agency document LFTGN03 Guidance on management of landfill gas	
	Carbon Dioxide	4.9%v/v			
	Oxygen	-			
	Carbon Monoxide	-			
	Atmospheric pressure	-			
	Differential pressure	-			
	Meteorological Data	-			
	Hydrogen	None set	Annually	In accordance with Environment Agency document Guidance for monitoring trace components in landfill gas LFTGN04 v 3.0 2010	
In waste monitoring boreholes LPC1 – LPC8	Trace Components	None set	Annually		

Table S3.7 Leachate– other monitoring requirements				
Emission point reference or source or description of point of measurement	Parameter	Monitoring frequency	Monitoring standard or method	Other specifications
LPC1 – LPC8	pH EC NH4-N TON TOC Sodium Potassium Calcium Magnesium Iron Manganese Cadmium Copper Chromium Lead Nickel Zinc Mercury Napthalene Toluene Trichloroethene PCB Phenol Cyanide COD BOD	Quarterly	In accordance with Environment Agency document LFTGN02 'Guidance on Monitoring of Landfill Leachate, Groundwater and Surface Water'	Spot Sample
LPC1-LPC8	Hazardous substances screen	Annually		
LPC1-LPC8	Depth to base of monitoring well	Annually		

Table S3.8 Surface water – other monitoring requirements				
Emission point reference or source or description of point of measurement	Parameter	Monitoring frequency	Monitoring standard or method	Other specifications
SW1, SW2, SW3, SWMP1, SWMP2, SWMQP1	Temperature, DO, pH, EC, TSS	Monthly	In accordance with Environment Agency	Field and Spot sample

Table S3.8 Surface water – other monitoring requirements				
Emission point reference or source or description of point of measurement	Parameter	Monitoring frequency	Monitoring standard or method	Other specifications
	TON, TOC, COD, Chloride Sodium Potassium Calcium Magnesium Iron Manganese Cadmium Copper Chromium Lead Nickel Zinc Mercury Napthalene Toluene Trichloroethene PCB Phenol Cyanide Nitrate Nitrite TOC	Annually	document LFTGN02 'Guidance on Monitoring of Landfill Leachate, Groundwater and Surface Water'	Spot sample

Table S3.9 Groundwater – other monitoring requirements				
Emission point reference or source or description of point of measurement	Parameter	Monitoring frequency	Monitoring standard or method	Other specifications
GBH1 to GBH6	Water level, monitoring point base, DO, Eh, pH, EC, NH4-N, TON(oxidised-N), TOC, BOD, COD, Ca, Cr, Hg Mg, Na, K, Alk, SO4, Cl, Fe, Mn, Cd, Cr, Cu, Ni, Pb and Zn. Napthalene Toluene Trichloroethene PCB Phenol Cyanide Nitrate Nitrite	Quarterly	In accordance with Environment Agency document LFTGN02 'Guidance on Monitoring of Landfill Leachate, Groundwater and Surface Water'	Spot sample
GBH1 to GBH6	Hazardous substances	Annually		Spot sample

Table S3.10 Particulate matter in ambient air - monitoring requirements					
Monitoring Point Ref. /Description	Parameter	Limit (Including Unit)	Reference Period	Monitoring Frequency	Monitoring Standard or Method
20m downwind of asbestos disposal cell	Asbestos Fibres	-	2 hours	Monthly for the first 2 months depositing asbestos and thereafter, if agreed in writing by the Environment Agency, twice per year or every 5000 tonnes asbestos deposited, whichever is greater.	While asbestos is being deposited. • Pumped sampling • 1m above ground level • Flow rate = 4 litres/ minute • Minimum sample volume = 480 litres • Filter pore size = 1.2µm Where total fibre concentration exceeds 0.01 fibres/ ml in any sample, that sample must be submitted for electron microscopy to confirm the concentration of asbestos fibres present.
50m upwind of asbestos disposal cell	Asbestos Fibres	-	2 hours	During all downwind monitoring	Asbestos fibre limit of detection = 0.001 fibres/ ml
Site boundary downwind of asbestos disposal cell	Asbestos Fibres	-	2 hours	Minimum twice per year.	
DM1 DM2 DM3	Particulate matter	200mg/m ³ /day	Technical Guidance Note M17 v2 (July 2013)	Bi annually With at least one sample taken during the summer months	Deposition Gauges as per Technical Guidance Note M17 v2 (July 2013)
	PM10	250µgm ⁻³			

Schedule 4 - Reporting

Parameters, for which reports shall be made, in accordance with conditions of this permit, are listed below.

Table S4.1 Reporting of monitoring data

Parameter	Emission or monitoring point/reference	Reporting period	Period begins
Leachate levels As required by condition 3.5.1	LPC1 – LPC8, LMP1.1, 2.1, 3.1, 3.2, 4.1, 4.2, 5.1, 5.2, 6.1, 6.2, 7.1, 7.2, 8.1 and 8.2	Every 3 months	1 January, 1 April, 1 July, 1 October
Emissions to water Parameters as required by condition 3.5.1	SW1, SW2, SW3, SWMP1, SWMP2, SWMQP1	Every 3 months	1 January, 1 July
Groundwater Parameters as required by condition 3.5.1	GBH 2 to 4	Every 3 Months	1 January, 1 April, 1 July, 1 October
Landfill gas lateral migration Parameters as required by condition 3.5.1	GBH1 to 6	Every 3 months	1 January, 1 April, 1 July, 1 October
Landfill gas surface emissions Parameters as required by condition 3.5.1	Phase 1 - 8	Every 12 months	1 January
Other Landfill gas monitoring Parameters as required by condition 3.5.1	In waste monitoring boreholes LPC1 – LPC8	Every 3 months	1 January, 1 April, 1 July, 1 October
Other leachate monitoring Parameters as required by condition 3.5.1	LPC1 – LPC8	Every 3 months	1 January, 1 April, 1 July, 1 October
	LPC1 – LPC8	Every 12 months	1 January
Hazardous substances Screen			
Other surface water monitoring Parameters as required by condition 3.5.1	SW1, SW2, SW3, SWMP1, SWMP2, SWMQP1	Every 3 months	1 January, 1 April, 1 July, 1 October
		Every 12 months	1 January
Other substances			
Other groundwater monitoring Parameters as required by condition 3.5.1	GBH1 to GBH6	Every 3 months	1 January, 1 April, 1 July, 1 October
Asbestos fibres Parameters as required by condition 3.5.1	Upwind, downwind and Installation boundary	1 month after monitoring has commenced	Date permit issued
Particulate matter Parameters as required by condition 3.5.1	DM1, DM2, DM3	Every 12 months	1 January

Table S4.2: Annual production/treatment

Leachate:	Cubic metres/year
Disposed of off site;	
Disposed of to any onsite effluent treatment plant;	
Recirculated into the waste mass.	
Surface water and/ or groundwater:	Cubic metres/year
Disposed of off site;	
Disposed of to any onsite effluent treatment plant.	
Landfill gas:	Normalised cubic metres/year
combustion in flares;	
combustion in gas engines;	
Other methods of gas utilisation.	

Table S4.3 Performance Parameters

Parameter	Frequency of assessment	Annual total	Unit
Energy used (including for leachate treatment)	Annually		MWh of electricity

Table S4.4 Reporting Forms

Media/parameter	Reporting Format	Date of Form
Leachate	Reporting format to be agreed in writing with the Environment Agency	-
Controlled water	Reporting format to be agreed in writing with the Environment Agency	-
Groundwater	Reporting format to be agreed in writing with the Environment Agency	-
Landfill gas	Reporting format to be agreed in writing with the Environment Agency	-
Particulate matter	Reporting format to be agreed in writing with the Environment Agency	-
Waste Return	Waste Return Form RATS2E	Date Permit issued
Landfill topographical surveys and interpretation	Reporting format to be agreed in writing with the Environment Agency	-

Schedule 5 - Notification

This page outlines the information that the operator must provide.

Units of measurement used in information supplied under Part A and B requirements shall be appropriate to the circumstances of the emission. Where appropriate, a comparison should be made of actual emissions and authorised emission limits.

If any information is considered commercially confidential, it should be separated from non-confidential information, supplied on a separate sheet and accompanied by an application for commercial confidentiality under the provisions of the EP Regulations.

Part A

Permit Number	
Name of operator	
Location of Facility	
Time and date of the detection	

(a) Notification requirements for any malfunction, breakdown or failure of equipment or techniques, accident, or emission of a substance not controlled by an emission limit which has caused, is causing or may cause significant pollution

To be notified within 24 hours of detection

Date and Time of the event	
Reference or description of the location of the event	
Description of where any release into the environment took place	
Substances(s) potentially released	
Best estimate of the quantity or rate of release of substances	
Measures taken, or intended to be taken, to stop any emission	
Description of the failure or accident.	

(b) Notification requirements for the breach of a limit	
To be notified within 24 hours of detection unless otherwise specified below	
Emission point reference/ source	
Parameter(s)	
Limit	
Measured value and uncertainty	
Date and time of monitoring	
Measures taken, or intended to be taken, to stop the emission	

Time periods for notification following detection of a breach of a limit	
Parameter	Notification period

(c) Notification requirements for the detection of any significant adverse environmental effect	
To be notified within 24 hours of detection	
Description of where the effect on the environment was detected	
Substances(s) detected	
Concentrations of substances detected	
Date of monitoring/sampling	

Part B to be supplied as soon as practicable

Any more accurate information on the matters for notification under Part A.	
Measures taken, or intended to be taken, to prevent a recurrence of the incident	
Measures taken, or intended to be taken, to rectify, limit or prevent any pollution of the environment which has been or may be caused by the emission	
The dates of any unauthorised emissions from the facility in the preceding 24 months.	

Name*	
Post	
Signature	
Date	

* authorised to sign on behalf of the operator

Schedule 6 - Interpretation

“Annually” means once every year.

“Authorised officer” means any person authorised by the Environment Agency under section 108(1) of The Environment Act 1995 to exercise, in accordance with the terms of any such authorisation, any power specified in section 108(4) of that Act.

“Background concentration” means such concentration of that substance as is present in:

- For emissions to surface water, the surface water quality up-gradient of the site; or
- For emissions to sewer, the surface water quality up-gradient of the sewage treatment works discharge; or
- For emissions of landfill gas, the ground or air outside the site and not attributable to the site.

“Cell layout drawing” means:

(a) A drawing or drawings of the proposed new cell that illustrate(s) in sufficient detail:

- i. the location of the new cell on the site;
- ii. the proposed level (Above Ordnance Datum) of the base of the excavation;
- iii. the proposed finished levels of all containment and leachate drainage layers;
- iv. the positions of leachate management infrastructure; and
- v. the positions of landfill gas infrastructure (if appropriate).

(b) A detailed written explanation of any minor design changes from the most recently approved cell that result from the new cell layout. This would include, for example:

- i. changes to slope length and gradient within the cell;
- ii. new leachate or landfill gas infrastructure construction design;
- iii. slope stability issues such as new basal excavation level; and/or
- iv. depth of waste.

“Construction Proposals” means written information, at a level of detail appropriate to the complexity and pollution risk, on the design, specifications of materials selected, stability assessment (where relevant) and the construction quality assurance (CQA) programme in relation to the New Cell or Landfill Infrastructure.

“CQA Validation Report” means the final “as built” construction and engineering details of the New Cell or of the Landfill Infrastructure. It must provide a comprehensive record of the construction and must include, where relevant:

- The results of all testing required by the CQA programme - this must include the records of any failed tests with a written explanation, details of the remedial action taken, referenced to the appropriate secondary testing;
- Plans showing the location of all tests;
- “As-built” plans and sections of the works;
- Copies of the site engineer’s daily records;

- Records of any problems or non-compliances and the solution applied;
- Any other site specific information considered relevant to proving the integrity of the New Cell or Landfill Infrastructure;
- Validation by a qualified person that all of the construction has been carried out in accordance with the Construction Proposals.

“disposal” means any of the operations provided for in Annex I to Directive 2008/98/EC of the European Parliament and of the Council on waste.

“EP Regulations” means The Environmental Permitting (England and Wales) Regulations SI 2010 No.675 and words and expressions used in this permit which are also used in the Regulations have the same meanings as in those Regulations.

“emissions of substances not controlled by emission limits” means emissions of substances to air, water or land from the activities, either from the emission points specified in schedule 3 or from other localised or diffuse sources, which are not controlled by an emission limit..

“groundwater” means all water, which is below the surface of the ground in the saturation zone and in direct contact with the ground or subsoil.

“hazardous property” has the meaning given in Schedule 3 of the Hazardous Waste (England and Wales) Regulations 2005 No.894 and the Hazardous Waste (Wales) Regulations 2005 No. 1806 (W.138).

“Industrial Emissions Directive” means DIRECTIVE 2010/75/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 24 November 2010 on industrial emissions

“Landfill Infrastructure” means any specified element of the:

- permanent capping;
- temporary capping (i.e. engineered temporary caps not cover materials);
- leachate abstraction systems;
- leachate transfer, treatment and storage systems;
- surface water drainage systems;
- leachate monitoring wells;
- groundwater monitoring boreholes;
- landfill gas monitoring boreholes;
- landfill gas management systems;
- lining within the installation.

within the site.

“Liquids” means any liquid other than leachate within the engineered landfill containment system.

“LFTGN 05” means Environment Agency Guidance for monitoring enclosed landfill gas flares.

“LFTGN 07” means Environment Agency Guidance on monitoring landfill gas surface emissions.

“LFTGN 08” means Environment Agency Guidance for monitoring landfill gas engines.

“Medicinal product” means any medicine licensed by the Medicines and Healthcare products Regulatory

Agency (MHRA) of their predecessors under the Medicines Act 1968, section 130.

"New Cell" means any new cell, part of a cell or other similar new area of the site where waste deposit is to commence after issue of this permit and can comprise:

- groundwater under-drainage system;
- permanent geophysical leak location system;
- leak detection layer;
- sub-grade;
- barriers;
- liners;
- leachate collection system;
- leachate abstraction system;
- separation bund/layer;
- cell or area surface water drainage system;
- side wall subgrade and containment systems;

for the New Cell.

"No impact" means that the change made to the construction process will not affect the agreed design criteria, specification or performance in a way that has a negative effect.

"Pests" means Birds, Vermin and Insects.

"quarter" means a calendar year quarter commencing on 1 January, 1 April, 1 July or 1 October.

"recovery" means any of the operations provided for in Annex II to Directive 2008/98/EC of the European Parliament and of the Council on waste.

"Review of the Hydrogeological Risk Assessment" means a written review of the hydrogeological risk assessment included in the Application, together with any other parts of the Application that addressed the requirements of the EP Regulations. The review shall assess whether the activities of disposal or tipping for the purpose of disposal of waste authorised by the permit continue to meet the requirements of the EP Regulations.

"Waste code" means the six digit code referable to a type of waste in accordance with the List of Wastes (England) Regulations 2005, or List of Wastes (Wales) Regulations 2005, as appropriate, and in relation to hazardous waste, includes the asterisk.

"Waste Framework Directive" or *"WFD"* means Waste Framework Directive 2008/98/EC of the European Parliament and of the Council on waste.

"year" means calendar year ending 31 December.

Where a minimum limit is set for any emission parameter, for example pH, reference to exceeding the limit shall mean that the parameter shall not be less than that limit.

Unless otherwise stated, any references in this permit to concentrations of substances in emissions into air means the standards included in Environment Agency Guidance for Monitoring Enclosed Landfill Gas Flares LFTGN 05 or Guidance for Monitoring Landfill Gas Engine Emissions LFTGN 08.

Wrexham Remediation Works

Mark Knight

Sent: 01 June 2015 13:09

To: Wort, Elaine (Elaine.Wort@cyfoethnaturiolcymru.gov.uk)

Cc: Jemma Reinsch (JemmaReinsch@hydrock.com)

Elaine

Thanks for your time today. As per our discussion and with regard to the strategy for the Wrexham site we are proposing:

1. Excavation and off-site disposal of tar-impacted soils and any free phase contamination with re-use of visually un-impacted soils;
2. Extraction of groundwater from the recovery wells (to be installed following completion of the soil remediation works) to recover the free phase globules in groundwater and remove the grossly contaminated dissolved phase contamination in groundwater beneath the site. We aim to extract 2-3 pore volumes-worth of groundwater.

Monitoring of the existing wells has not identified a measureable thickness of LNAPL or DNAPL in the wells to date.

As discussed, our envisaged goal would be:

1. No visual evidence of tar-related contamination in soils (ie removal of the primary sources);
2. No visual evidence of hydrocarbon globules in groundwater (taking into consideration the rules of diminishing returns and the costs/benefits of continued recovery if some minor evidence of a hydrocarbon emulsion remains);
3. Demonstration that there is no measureable impact on surface water quality in the River Gwenfro associated with the tar/hydrocarbon contamination present at the site.
4. Completion of groundwater monitoring along the downgradient site boundary over a 6 month period (as per the strategy document) following groundwater remediation to demonstrate stable conditions and record final groundwater quality on the understanding that the sources have been removed and that groundwater quality is likely to improve over the longer term.

We will sample upstream and downstream surface water in the river during the works and as part of the subsequent monitoring programme to demonstrate that the works and final site conditions are not having a deleterious affect on river water quality with regard to the contaminants of concern.

I hope that accurately reflects our discussion. If you have any subsequent questions regarding the strategy document please dont hesitate to give me a call.

We propose to start the soil works next week. We envisage that we will be excavating the tar tank and associated tar contamination early week commencing 22nd June if you would like to visit site. The excavation in this area will give us an indication of local groundwater impact.

I will give you a call during the week of 15th June to provide an update on progress and provide an indication of the best day to visit site.

Thanks for your help.

Kind Regards

Mark

Mark

Thank you for your call today. Your email very usefully summarises my understanding of your proposals for the site.

We welcome clarification of the proposed 6 month monitoring period, which I understand will start following completion of the product removal/groundwater treatment. I assume that the surface water monitoring is included in this and will also continue for 6 months following completion of the groundwater treatment.

I have also reviewed your Hydrocks's "Remedial Strategy, Verification and Monitoring Plan for the WWU Site, Rivulet Road, Wrexham, Hydrock Ref:HC15016/R001, April 2015". Given the context of the site and the surrounding development history, we are satisfied with "betterment" as the principle of the remediation strategy. Notwithstanding that, I have the following observations/comments on the report:

1. Section 6.3.1, 2nd last paragraph states that "*Where no visual contamination is observed the upper 600 mm will be removed and replaced with imported material.*" Why is it necessary for the material be removed and replaced if it is not visually contaminated?

2. With regard to re-use of soils and potential risk to controlled waters, we understand that no quantified remedial targets as such are proposed. Section 6.4.2 states that *The site-won material placed at depth will be sampled and tested and the results will be provided in the Verification report as a record of final ground conditions at the site.*

The residual risks associated with groundwater contamination in the gravels will be considered following discussions with NRW.

We would expect the material to be sampled and the risks to controlled waters assessed before the material is placed at depth, i.e. before verification. Otherwise discussion may be too late as the material will be in place and remediation complete. We would welcome clarification of how it is proposed that this is addressed. If the material is to be reused under the CLAIRE CoP, then the Qualified Person will need to be satisfied that the material is suitable for use and does not pose an unacceptable risk to the controlled waters.

3. Table 8.1, does not include the interpreted post remediation risks relating to controlled water linkages.

I trust the above is helpful. Please note that my comments are in relation to controlled waters only. I would like to attend site during the works, particularly when you will be at the stage of encountering/treating below ground sources; so yes, please contact me at least a week in advance of the relevant stage of works.

Kind regards

Elaine

Thank you for this and your message.

I will out of the country for the rest of the week attending a conference. I won't be back in the office until Monday.

In the meantime, I confirm that we are satisfied with your proposed way forward.

Please continue to keep me updated of progress and let me know (a week in advance if possible) when it would be the best time to visit the site. I would like to be present when you are in the vicinity of the tar source.

Kind regards

Elaine

Subject: Wrexham

Dear Elaine

Thanks for reviewing the strategy and for your comments. I have provided responses below in blue.

We welcome clarification of the proposed 6 month monitoring period, which I understand will start following completion of the product removal/groundwater treatment. I assume that the surface water monitoring is included in this and will also continue for 6 months following completion of the groundwater treatment.

Yes, we will sample surface water upstream (by the road bridge) and downstream of the site over the 6 month period.

I have also reviewed your Hydrocks's "Remedial Strategy, Verification and Monitoring Plan for the WWU Site, Rivulet Road, Wrexham, Hydrock Ref:HC15016/R001, April 2015". Given the context of the site and the surrounding development history, we are satisfied with "betterment" as the principle of the remediation strategy. Notwithstanding that, I have the following observations/comments on the report:

1. Section 6.3.1, 2nd last paragraph states that "*Where no visual contamination is observed the upper 600 mm will be removed and replaced with imported material.*" Why is it necessary for the material be removed and replaced if it is not visually contaminated? [This will be removed to ensure that the human health criteria are achieved in the upper 600mm.](#)

2. With regard to re-use of soils and potential risk to controlled waters, we understand that no quantified remedial targets as such are proposed. Section 6.4.2 states that *The site-won material placed at depth will be sampled and tested and the results will be provided in the Verification report as a record of final ground conditions at the site.*
The residual risks associated with groundwater contamination in the gravels will be considered following discussions with NRW.

We would expect the material to be sampled and the risks to controlled waters assessed before the material is placed at depth, i.e. before verification. Otherwise discussion may be too late as the material will be in place and remediation complete. We would welcome clarification of how it is proposed that this is addressed. If the material is to be reused under the CLAIRE CoP, then the Qualified Person will need to be satisfied that the material is suitable for use and does not pose an unacceptable risk to the controlled waters.

[We have not included any controlled waters soil criteria for a number of reasons. The primary one being our conceptualisation of the site and our strategy to ensure that no significant pathway exists between the made ground and groundwater in the gravel aquifer following remediation.](#)

[Where present, the natural clay layer appears to prevent the downwards migration of infiltrating water \(and thus leachable contamination\), creating a perched water table. The active contaminant linkage appears to be associated with areas of the site where the clay is absent \(around structures, etc.\). As such, it is inferred that the primary risk drivers are a\) the ongoing vertical migration of tars and impacted perched water into the gravels where the clay is absent and b\) the lateral migration of tar/dissolved phase in groundwater in the gravels.](#)

[Our strategy is to remove the mobile sources in the made ground \(and the deep structures themselves\) and replace the clay layer where absent. As such, where contamination has extended to the gravel and the aquifer water table, we will excavate the contamination and then place and compact a layer of clay before backfilling to surface with site-won material. This approach will remove the primary source and break the future pathway between the made ground and the gravels. With the linkage broken and the tar removed it was our view that criteria for the remaining made ground would not actually be necessary.](#)

[Despite this, we are in the process of completing a controlled waters DQRA which we hope will further inform the process. Our concerns with generating any binding criteria relate to the limited size of the site which prevents us from obtaining any site-specific data \(eg. degradation rates, etc.\) which would have allowed us to fully justify the use of dual phase degradation in the P20 model \(even though we believe it is highly likely that degradation in both phases is occurring\). The use of single phase degradation results in the generation of unrealistically low remediation criteria for some contaminants and the potential requirement for off-site disposal of far more material than we deem necessary from a risk point of view, particularly when the post remediation conceptual model is taken into consideration.](#)

[We have developed some preliminary criteria using both single and dual phase degradation in the model. Many of the single phase criteria for the contaminants of concern are potentially](#)

achievable (ammonium, BTEX, etc.) for the visually unimpacted material, but some of the modelled PAHs (anthracene, fluoranthene and naphthalene) and TPH fractions have very low criteria for single phase only. I have summarised some initially derived criteria and the typical range of concentrations in visually unimpacted soils below.

Contaminant	Derived Criteria (mg/kg)		Typical range of recorded concentrations in visually unimpacted made ground (from SI)
	Using Single Phase	Using Dual phase	
Anthracene	1.0	1.3×10^8	<0.1 -26 mg/kg
Fluoranthene.	3.2	1.0×10^{17}	<0.1 - 48 mg/kg
Naphthalene.	3.9	8.5×10^6	<0.1 - 46 mg/kg

We wouldn't advocate using either the single or dual phase numbers, but a combination of the strategy to break the pathway and the current data set which shows relatively low levels of contamination in the visually unimpacted made ground we hope would support our proposal to visually assess material to determine suitability for re-use, underpinned with sampling to provide a record of final conditions. Due to the small size of the site and the restricted working area there is not the space to stockpile material while we await the analytical results, so we will have to replace material as we proceed with excavation.

Sorry - rather a long email, if you would like me to give you a call so we can discuss in more detail please let me know. We will forward the completed DQRA when complete.

Thanks for your help.

Kind Regards

Mark

Dear Angela

Thank you for your recent confirmation that you are satisfied with our proposed strategy for the remediation of the former gasworks site on Rivulet Road. We now also have approval from Elaine at NRW and works commence onsite this week.

Elaine would like to visit site when we remove the tar tank and the associated deeper tar contamination. I have agreed with her that we will try and give her a weeks notice of this work taking place. At present we are estimating that the tar tank will be excavated week commencing 22nd June. I was wondering if you would be interested in visiting the site at the same time?

If so, I will give you a call early next week to update you on progress.

Thanks for your help.

Kind Regards

Mark

For the attention of Jemma Reinsch

Dear Jemma,

Re: Post works Site Inspection – 2 Rivulet Road, Wrexham

Hydrock Consulting undertook a condition survey of this property on 11 June 2015, prior to Hydrock Contracting undertaking works on the adjacent site.

The report from this inspection is included within Appendix B.

A further report was undertaken on 18 November 2015, following completion of works on the adjacent site.

A photographic record of this visit can be found in Appendix A.

It can be seen from the photographs that none of the decorative cracks have worsened between the two reports. No additional cracks or damage was noted during inspection, or reported by residents.

Yours sincerely

Jon Bird
Associate – Structures
jonbird@hydrock.com

Condition Survey of 2 Rivulet Road, Wrexham

Prepared by

Jon Bird

Hydrock Ref: R/151410/001

Date of Survey: 11 June 2015

1.0 INTRODUCTION

1.1 Terms of Reference

The purpose of the survey was to identify and record all the visible defects internally and externally.

Descriptions of right and left, front and rear are made by facing the front elevation onto Rivulet Road. When referring to specific external elevations or to specific internal walls, descriptions of left and right are made as if facing the elevation or wall, unless otherwise noted.

1.2 Description of the Existing Building

The property comprises an and house of traditional masonry construction with tiled roof having two bedrooms. The property appears to be modern, and constructed within last 20 years.

1.3 Limitations

This report is based on visual observations only. We have inspected as much of the internal and external surface area of the building as is practicable but we have not inspected those areas which are covered, unexposed or not reasonably accessible.

This survey is intended as a factual record of the property prior to works taking place on adjacent land. This will serve as a benchmark in the unlikely event that any defects arise during the works which may be attributable to the works.

The survey is not intended for any other purpose, and may not be used for any other purpose without the express permission of Hydrock.

In the event that you feel that there are inaccuracies in the report, then please contact the undersigned to discuss.
