Fairbanks – Eurogarages process review

Fairbanks Environmental has been monitoring the whole of the Eurogarages network since September 2011 on behalf of Eurogarages.

We are a specialist wetstock monitoring company with and SIR (Statistical Inventory Reconciliation) leak detection system accredited to 9 ltrs per day

All of the stations that we monitor on behalf of Eurogarages across the United Kingdom have our own in-house designed system installed and this allows us to gather communication information as it is communicated between the electronic gauge and the POS (point of sale) on each site. This information includes the start and end time of every transaction as well as the volume dispensed.

As we poll the gauge/tills every 15 minutes we are able to have up to date information including any relevant alarms that are active on the gauge. We also have a pre-defined suite of thresholds that monitor the data that we retrieve from the sites and send alerts in-house to our team of dedicated analysts

Fairbanks and Eurogarages work closely to ensure there is a rigid two-way process structure and as a result we work closely with the staff at the individual sites, the relevant Area Managers as well as high level management at the Eurogarages Headquarters in Blackburn
All deliveries are checked on a daily basis and any anomalies cross referenced with Eurogarages or the fuel supplier and resolved, this is done at both tank and grade level.

On top of this all sales and deliveries are cross-referenced with Eurogarages on a monthly basis and any anomalies investigated and resolved

Regards

Sam McCracken
