The purpose of this design scheme is to upgrade the visual appearance of the area around the back door.

The present layout is the result of incremental changes in response to historic farming practices which are no longer relevant.

The scheme aims to implement small changes with a big impact focused around the dovecote.

Three levels are created with the car parking at the upper most, the back door to the house on the central level and the lawn around the dovecote at the lowest level (as existing around the dovecote), linked by a simple paved path and a couple of steps between each level.

A new access to the garden is formed using gates, to allow modern machinery and maintenance vehicles access to that area.
