For the attention of: Tom Maguire

Dear Tom

Re: Watching Brief for Asbestos Remediation at Proposed North Wales Prison

Introduction

During the earthworks at the above site, an area of Made Ground was uncovered containing Asbestos Containing Materials (ACM).

Redhills are the appointed asbestos analysts on site and Bagnall are appointed as the asbestos removal contractor. The ACM was classified as Asbestos Insulation Board (AIB) by Redhills.

Further works have been undertaken within this area by Bagnall and Redhills to delineate areas of gross Asbestos contamination. These works identified six areas of gross asbestos contamination, which required remediation and validation, reported in Redhills report 'Investigation, Sampling & Remediation Summary Report for Phase 3 Area', dated 25/04/2015, presented in Annex A.

Hydrock were commissioned by Lend Lease to review the plan of works with regards to the remediation of asbestos hotspots identified, and to provide a watching brief while the remediation works are undertaken.

Works Undertaken by Hydrock

Review of Plan of Works

Comments on the Bagnall plan of works (POW) were detailed in an email to Lend Lease on 8th May 2015 and are provided below:

- We had no overall objection to the Bagnall proposal.
- In particular, we had no major comment on the Health and Safety or other regulatory compliance issues as these are a Bagnall responsibility.
- The material was needed to be covered during transport on public roads, otherwise any AIB at the surface of the wagon would be released into the air.

Watching Brief

The watching brief was undertaken from 12th May, the first day of works, to 18th May 2015. Rebecca Price (Category B Trained) was present for the entirety of the works and James Macfarlane (Asbestos Manager for Hydrock) was present on the first day of works. Hydrock site staff were appropriately trained and equipped and undertook the watching brief from a suitable vantage point outside of the remediation areas.

Hydrock's remit was to advise as to whether material could be retained for re-use on site after handpicking of visible ACM, as per the Remediation Method Statement (Hydrock Report R/14656/003) or whether it had to be subject to offsite disposal.

The remediation areas were completed on the following days:

- Area 1 – Day 2
- Area 2 – Day 5
- Area 3 – Day 5
- Area 4 – Day 3
- Area 5 (A and B) – Day 3

Photographs of the remediation works are provided in Annex B. The final remediated areas are shown in Annex C.

Material to be disposed of offsite as hazardous waste was stockpiled and covered in a fenced off area. Jones Bros removed the material to be reused on site and placed it in the bund area for handpicking, which was undertaken by Bagnall after the watching brief (photographs provided in Annex B).

Material Volumes

The initial budget costs from Bagnall indicated that there could be up to 1,248 Tonnes of material requiring disposal as hazardous waste during the remediation works.

The final amount of material disposed of as hazardous waste was approximately 360 Tonnes (waste consignment notes are provided in Annex D). This is a reduction of 888 Tonnes from the original estimates requiring disposal. Based on a survey of the final remediation areas, the final amount retained on site is approximately 2,370 Tonnes, with all visible ACM handpicked and the material reused in the bund on the northern edge of the site.

We trust the above meets your requirements. If you require any further information in respect of the above, please do not hesitate to contact us.

Yours sincerely

Rebecca Price
Geo-environmental Consultant

Section 3.0: Results Summary

Appendix 1: Plan Showing Sample Locations

Appendix 2: Redhills Bulk Analysis Certificate

Appendix 3: Representative Photographic Log of Significant Asbestos Identified in Hotspots

Appendix 4: Photographic Log of 8 hotspots areas identified

Appendix 5: Photographic Log of 210 trial pit/trenches excavated in Phase 3, Zones 1-3

Appendix 6: Bagnalls RAMS for Investigation Works in Phase 3

1.0 Introduction

1.1 During ground works to excavate soils on the Wrexham HMP site according to the remedial strategy and land assessment produced by Hydrock, high concentrations of asbestos containing materials were found in the soils/clay in Phase 3 area. All works were ceased in the immediate area and following visual assessment an area within Phase 3 segregated off by Bagnalls and Redhills. Furthermore, in depth investigations were required to determine the level of contamination within the area to determine if the asbestos contamination was widespread or within isolated hotspots. Following collating of the information from the investigation this would be forwarded to the client with recommendations made on how the soil could be remediated.

1.2 Redhills and Bagnalls (a Licenced Asbestos Contractor) were asked to carry out further excavations and sampling to ascertain the extent of asbestos contamination (asbestos cement and asbestos insulating board) and to provide a photographic log and present findings of any hotspots i.e. there locations on a plan where coordinates would be mapped by the surveyors from Jones Bros Civil Engineering Ltd.

1.3 Redhills carried out initial confirmation bulk sampling of the asbestos-asbestos cement and asbestos insulating board (see Appendix 2). The levels of asbestos found were significant from large pieces/sheets buried within the re-engineered clay soil material in significant quantities in areas to be specified in this report. In addition to this sporadic small pieces of asbestos cement and asbestos insulating board were discovered across the surface of the area approximately 170m by 60m within Phase 3.

1.4 Following segregation of the area further investigation works were undertaken to determine the spread of asbestos contamination within the area which was found to be significant but required prior to any remediation being undertaken.

2.0 Scope of Works

2.1 Redhills and Bagnalls carried out investigation works from the 13/4/15 to 17/4/15 with the Phase 3 area segregated with barrier, approximately 170m by 60m.

2.2 In order to determine the spread of contamination within the Phase 3 area Bagnalls with assistance from Redhills carried out 210 radial trench excavations in order to pin point possible locations of asbestos contamination.

2.3 Radial trenches excavated determined that there were 8 hotpots where the levels of asbestos contamination within the soil were significant with large pieces of asbestos insulating board and asbestos cement unearthed in levels exceeding the 0.1% w/w hazardous weight limit.

2.4 The engineered soil/clay within the hotspots cannot be litter picked due to high levels of contamination with asbestos where the risk of undertaking such works would not ensure that the levels of asbestos in the soil material could be reduced beneath the 0.1 % w/w limit (see Appendix 3).

2.5 The radial trenches were successful in reducing the size of the area down to the specific hotspots, with the contamination with asbestos debris in the remaining area being intermittent and sporadic with either asbestos cement or asbestos insulating board.

2.6 Litter picking of remaining asbestos to surface of soil only (not sorting) in the area within Phase 3 excluding the significant contamination within hotspots, undertaken 20/4/15 to 24/4/15.

3.0 Results Summary

3.1 The investigative works discovered 8 hotspots, one of which had excessive amounts of water within it which were drained off using a pump. All hotspots had significant contamination with asbestos (see Appendix 4).

3.2 During the investigative works 210 radial trenches were excavated to determine whether asbestos contamination was present in the 170m by 60m area in Phase 3 see Appendix 1 & 5).

3.3 Soil/clay contaminated with minor asbestos cement and asbestos insulating board was handpicked to the remaining surface excluding the hotspot areas in Phase 3.

3.4 Hotspot areas marked up on plan, dimensions calculated and marked by Jones Bros Civil Engineering Ltd through consultation with Redhills and Bagnalls (See Appendix 1).

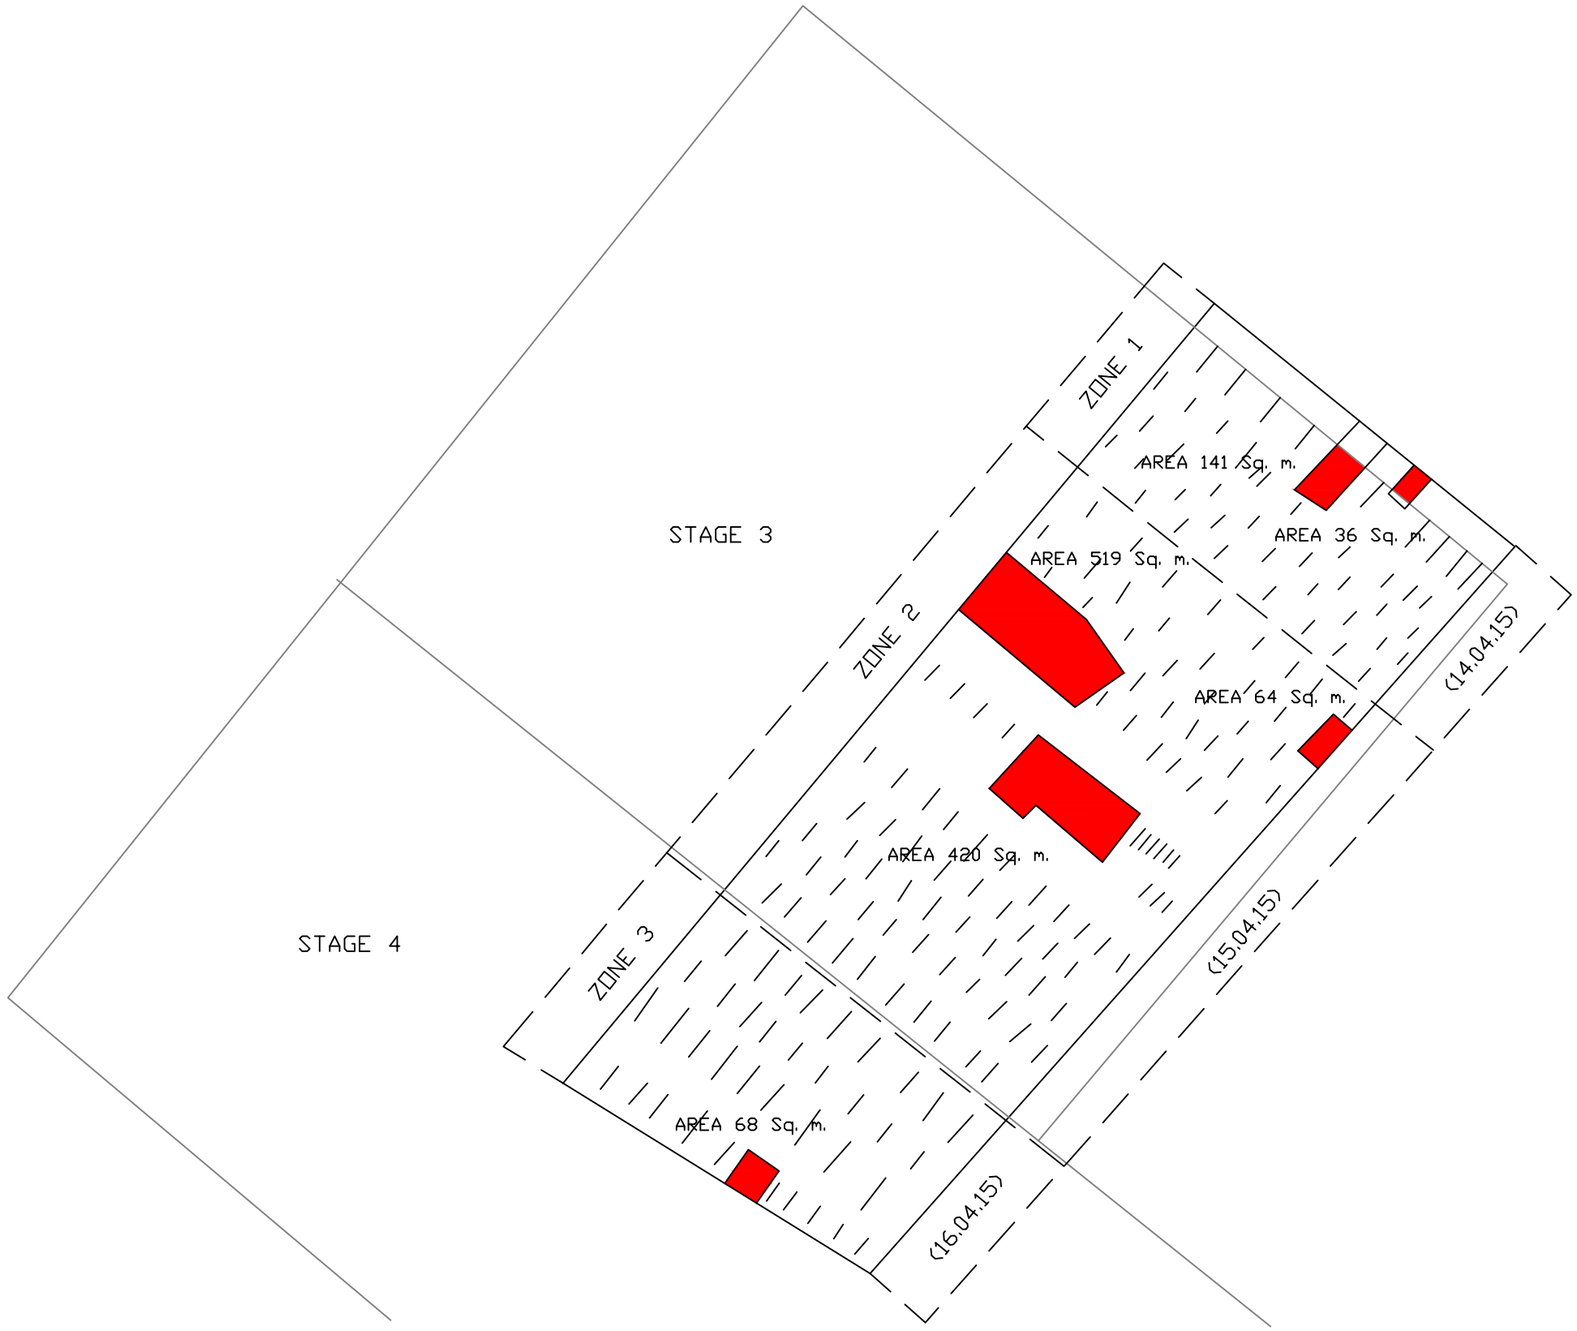

3.5 Redhills marked plans up with all radial trenches excavated along with associated photographs, provided within this report (see appendix 1 & 5).

3.6 Redhills divided the area in Phase 3 contaminated with asbestos into 3 distinct zones according to dates of investigative trenches excavated (see Appendix 1).

3.7 Where hotspots were closely located, such as the middle area where three hotspots were found, following radial trenches to determine mid points between clean and contaminated trenches within the hotspot are this led to these all becoming one hotspot (See Appendix 1).

Samples Analysed by:	Ashleigh Teal, Chris Washington, Ruksana Khalid

Notes

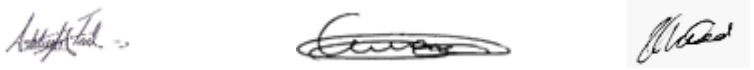

Analysis was carried out in accordance with our documented in-house methods and HSG 248 by Stereo and Polarised Light Microscopy using Dispersion Staining Techniques and is covered by our UKAS accreditation. Samples are retained for not less than 6 months from the date of analysis unless specifically requested.

Where samples are taken by a Redhills Consultant, sampling is carried out in accordance with our documented in-house methods, HSG 248 and HSG 264 and is covered by our UKAS accreditation. Where the sample is not taken by a Redhills consultant, Redhills cannot be responsible for inaccurate or unrepresentative sampling.

Opinions lie outside the scope of our UKAS accreditation.

*When samples are provided for analysis by the client and described as Cement, this is based on the opinions of the analyst completing the analysis. This opinion is not covered by our UKAS accreditation.

Signed on behalf of Redhills

SECTION 1 – CONTRACT DETAILS AND ATTENDANCES

1.1 Contractor Name

Bagnall (UK) Limited, Lexia House, West Yard, Lyncastle Way, Barleycastle Trading Estate. Appleton, Warrington, WA4 4ST, Telephone No: 01925 214 110

- Asbestos Contracts Manager: Carl Robinson
  Contact No: 07795267501

- Supervisor: Craig Jellicoe
  Mobile No: 07971 951371
  (The Supervisor will be on site at all times)

- Health & Safety Manager: Matt Dixon
  Office No: 0113 270 0775

- Number of men on site – 4

1.2 Hours of Work (Date & Times)

Start Date: 20.04.2015
Finish Date: 01.05.2015
Hours of Work: 0800-1700

1.3 Client Name and Telephone Number

Company Name and Address: Redhills, Room 2:15 Hollinwood Business Centre
Oldham, OL8 3QL

- Office Contact: Gareth Cooper

- Telephone No: 0161 684 2351

1.5 Local Health & Safety Executive:-

Bootle Headquarters - Redgrave Court, Merton Road, Bootle, L20 7HS

1.6 Independent UKAS Laboratory

The following independent UKAS accredited laboratory will be used and is contracted to Client:

Name: - Redhills Consultants – Gareth Cooper – 07824-151924

The work carried out by the independent analytical company will be as follows:-

- Personal Monitoring
- Background monitoring
- DCU clearance testing
- Soil sampling

1.7 Local Accident & Emergency

Wrexham Maelor Hospital, Croesnewydd Road, Wrexham, LL13 7TD
01978 291100

1.8 Names of first aiders: - Craig Jellicoe – Bagnall Supervisor. Lend Lease also have first aiders on site, details will be provided during the site induction.

1.9 Location of Muster points: - Adjacent to the site offices.

1.10 Site Induction: - The induction will be undertaken by Lend Lease, Bagnall UK are to be inducted on the possible presence of unexploded bombs and the procedure to follow if a suspicious item is identified. Details of welfare facilities and site specific emergency procedures will be given during the site induction.

1.11 Details of any other Asbestos licence Holders: - None

SECTION 2 – RISK ASSESSMENT

Employer: Bagnall UK	**Site:** Wrexham Prison
Assessor Name: Carl Robinson	**Assessment Date: 02.04.2015**

Assessment Serial Number: A02909.009

1. Activity /Process Being Assessed

Soil investigation

2. Hazards Identified	3. People at Risk
1. Working in close proximity of members of staff The work area will be segregated off with a physical barrier using fence panels and the appropriate signage to restrict access. The Supervisor is to meet any deliveries at the main entrance & escort them to the work area. 2no Banksmen will be used when machines and skips are being moved into the working zone. 2. Removal of asbestos containing materials Dust suppression by the use of water and surfactant through a BS8520 sprayer. Use of RPE (half masks). HEPA Vacuums to be used for primary decontamination. DCU in place to be used for personal decontamination. Works to be carried out within segregated respirator zone. 3. Electricity from leads (110v) All electrical items to be DOP tested and leads have PAT test. Checks to be recorded. 4. Generators The generator is to be sited at least 5m away from the working zone to avoid fumes blowing into the respirator zone; the generator is to have a drip tray and a Spill kit will be available. Generators will be filled using a pump. 5. Uneven surfaces The operatives are wear ankle protecting boots with S/S midsole and steel toecaps due to uneven floor surface. Jones Bros will flatten the ground as far as is reasonably practicable. 6. Manual handling of waste and tools Manual handling is to be carried out by trained personnel; bags are to be filled ≤12kg. The Supervisor is to weigh random bags using his digital weigher. 7. Working in close proximity to large machinery The machine will have a banksman at all times. Communication will be via 2 way radios held by the machine man, moxy driver, banksman and supervisor. Jones Bros will have a detailed method statement detailing the movement of traffic; a TBT is to be given to our operatives by Jones Bros. 8. Vehicle operations in bad weather conditions Vehicle drivers will take extra care. Operatives are to wear hi-vis clothing and ensure they are clearly visible to moving vehicles. Stop work if weather becomes too severe. 9. Ground works As the excavation is being undertaken the ground will be assessed and stepped so that the soil will not collapse, safe access will be provided by Jones Bros.	Operatives / Analyst / machine drivers / banksmen

10. Unexploded bombs This site has been highlighted as a potential for presence of unexploded ordnance from the WW2 era. Information about this will be explained in the site induction. If at any time you suspect that you may have come across an unexploded bomb then work must stop immediately, the area should be secured and a supervisor contacted immediately. 11. Live services All local service drawings to be checked. CAT scan survey to be carried out prior to commencement of work. Services identified to be marked out on the ground. Permit to excavate to be obtained from Lend Lease. Jones Bros will have detailed information regarding any services. 12. Eye impact Any operatives cleaning the machine with the power sprayer must wear protective glasses and impact visor. 13. Noise Ear protection will be worn by all personnel when working around the generators / sprayers, the area will be segregated off and signage applied.	**4. Frequency and Duration of Exposure to the Risk**

5. Control of Substances Hazardous to Health

Materials	Hazard	Risk Rating (after controls)
Idenden 30/330	Non-hazardous.	Very low
Propane	 Highly/ Extremely flammable	Low

7. Environmental

Aspect	Impact	Risk Rating (after controls)
Asbestos Waste	Pollution	Low
Drainage of DCU Water	Pollution	Low
Chemicals (lubricants/ Foams/ Glues/ Surfactant)	Pollution	Very Low
Fuel Oils/ Diesel	Pollution	Low
Waste Timber & Polythene	Pollution	Very Low
Non Hazardous Wastes	Pollution	Low

9. Risk Rating With Precautions: MEDIUM	**Consequence: Likelihood: Rating:** Risk Rating= Consequence x Likelihood: 1 Insignificant, 2 to 9 (low), 10 to 15 (Medium), 16 to 25 (High)

10. Management Action:	**11. Priority For Action (date)**
Site audits Planning Write POW	**IMMEDIATE**

12. Signature Of Assessor:	**13. Next Formal Review Date: 02.04.2017**

SECTION 3 – ASSESSMENT OF ASBESTOS WORKS

Site Location	Item/Type	Condition	Fully controlled / locally controlled	Extent / Quantity	Scope of Work/Action	Fixing	Estimated fibre release after control measures	Completed (Y/N)
Stage 3	Cement – Chrysotile, AIB – Chrysotile	Poor / wet	Locally controlled	160m x 600=9600 M2	Sampling	loose	<0.1f/ml	

Sequence of works - **SUPERVISOR TO COMPLETE**

Site Location	Working zones created	Analyst sampling works		Sign off
Stage 3				

SECTION 4 – METHOD OF WORKING

Overview

A land remediation strategy has been produced by Hydrock for the entire site. Areas of contaminated soil have been identified in various locations (shown further on in the plans), these locations are called 'hot-spots'.
Within Stage 3 asbestos cement and asbestos insulation boarding has been identified and sampled containing chrysotile.

Bagnalls and Jones Bros will excavate the soil and Redhills will visual and sample the trial pits these will then be recorded and a removal strategy will be written

Bagnall UK are to provide a watching brief alongside Redhills during the excavation works.

All areas will be CAT scanned by Jones Bros before the starts.

2 levels of asbestos training will be required to undertake the works.

Cat C - will be for the fully trained asbestos removal operatives provided by Bagnall who will be keeping a watching brief as the excavator undertakes the trail pit

Cat A – will be for the Machine drivers, and the banksmen all provided by Jones Bros who have had the site specific training and also decontamination procedures.

General

Any amendments to this Method Statement on site will be made by the Supervisor not the Operatives; the Supervisor will contact the Contracts manager prior to any amendments being made. Any amendments to the Plan of Work will be communicated to the operatives by carrying out a Tool Box Talk.

SECTION 5 – PPE, RPE & EQUIPMENT

Personal Protective Equipment

- Type 3, category 5/6 Disposable overalls with elasticated hoods, wrists and ankles will be worn.
- White overalls will be worn for carrying out the works
- Steel toe boots with ankle support
- Protective gloves.
- Hard hats
- Hi-visibility vests
- Safety glasses
- Ear Protection

Respiratory Protective Equipment

We have selected the RPE, which is suitable to the job, the environment, and anticipated maximum exposure and to the wearer.

Respirator selection chart for protection against asbestos in air.

B(UK)L Type	EN No.	Filter	Protection Factor	
C. Filtering ½ masks without Inhalation valves	EN1827	P3	20	☐
Half mask and filter (Mask) (Filter) Sundstrom or similar with same protection factor	EN140 EN143	P3	20	☒
Full Face Mask (Mask) (Filter)	EN136 EN143	P3	40	☐
Power Assisted Masks (Mask) (Filter) Phantom or similar with same protection factor	EN12942 EN143	P3	40	☐

Equipment Schedule

Hygiene Facilities	8 man mobile shower
Air Movers	850cmh (within the shower)
Fibre Suppressant and System	handheld 5 litre pump sprayer with Idenden 30/330 diluted mix at 15:1
Power supply	generator
Vacuum Equipment	HEPA filtered vacuums
Access Equipment	Not applicable

SECTION 6 – WASTE REMOVAL

- All waste will be removed from the working area double bagged or double wrapped.
- Waste will be removed immediately to the van and taken to the waste skip.
- All waste will be stored in a sealed, locked, asbestos skip
- All waste will be removed from site using a certified waste carrier.
- All waste will be transported using a consignment note in accordance with the Hazardous Waste Regulations 2005.
- All asbestos waste will be taken to a licensed landfill or waste transfer station for subsequent disposal to a licensed landfill, waste will be disposed of at:-

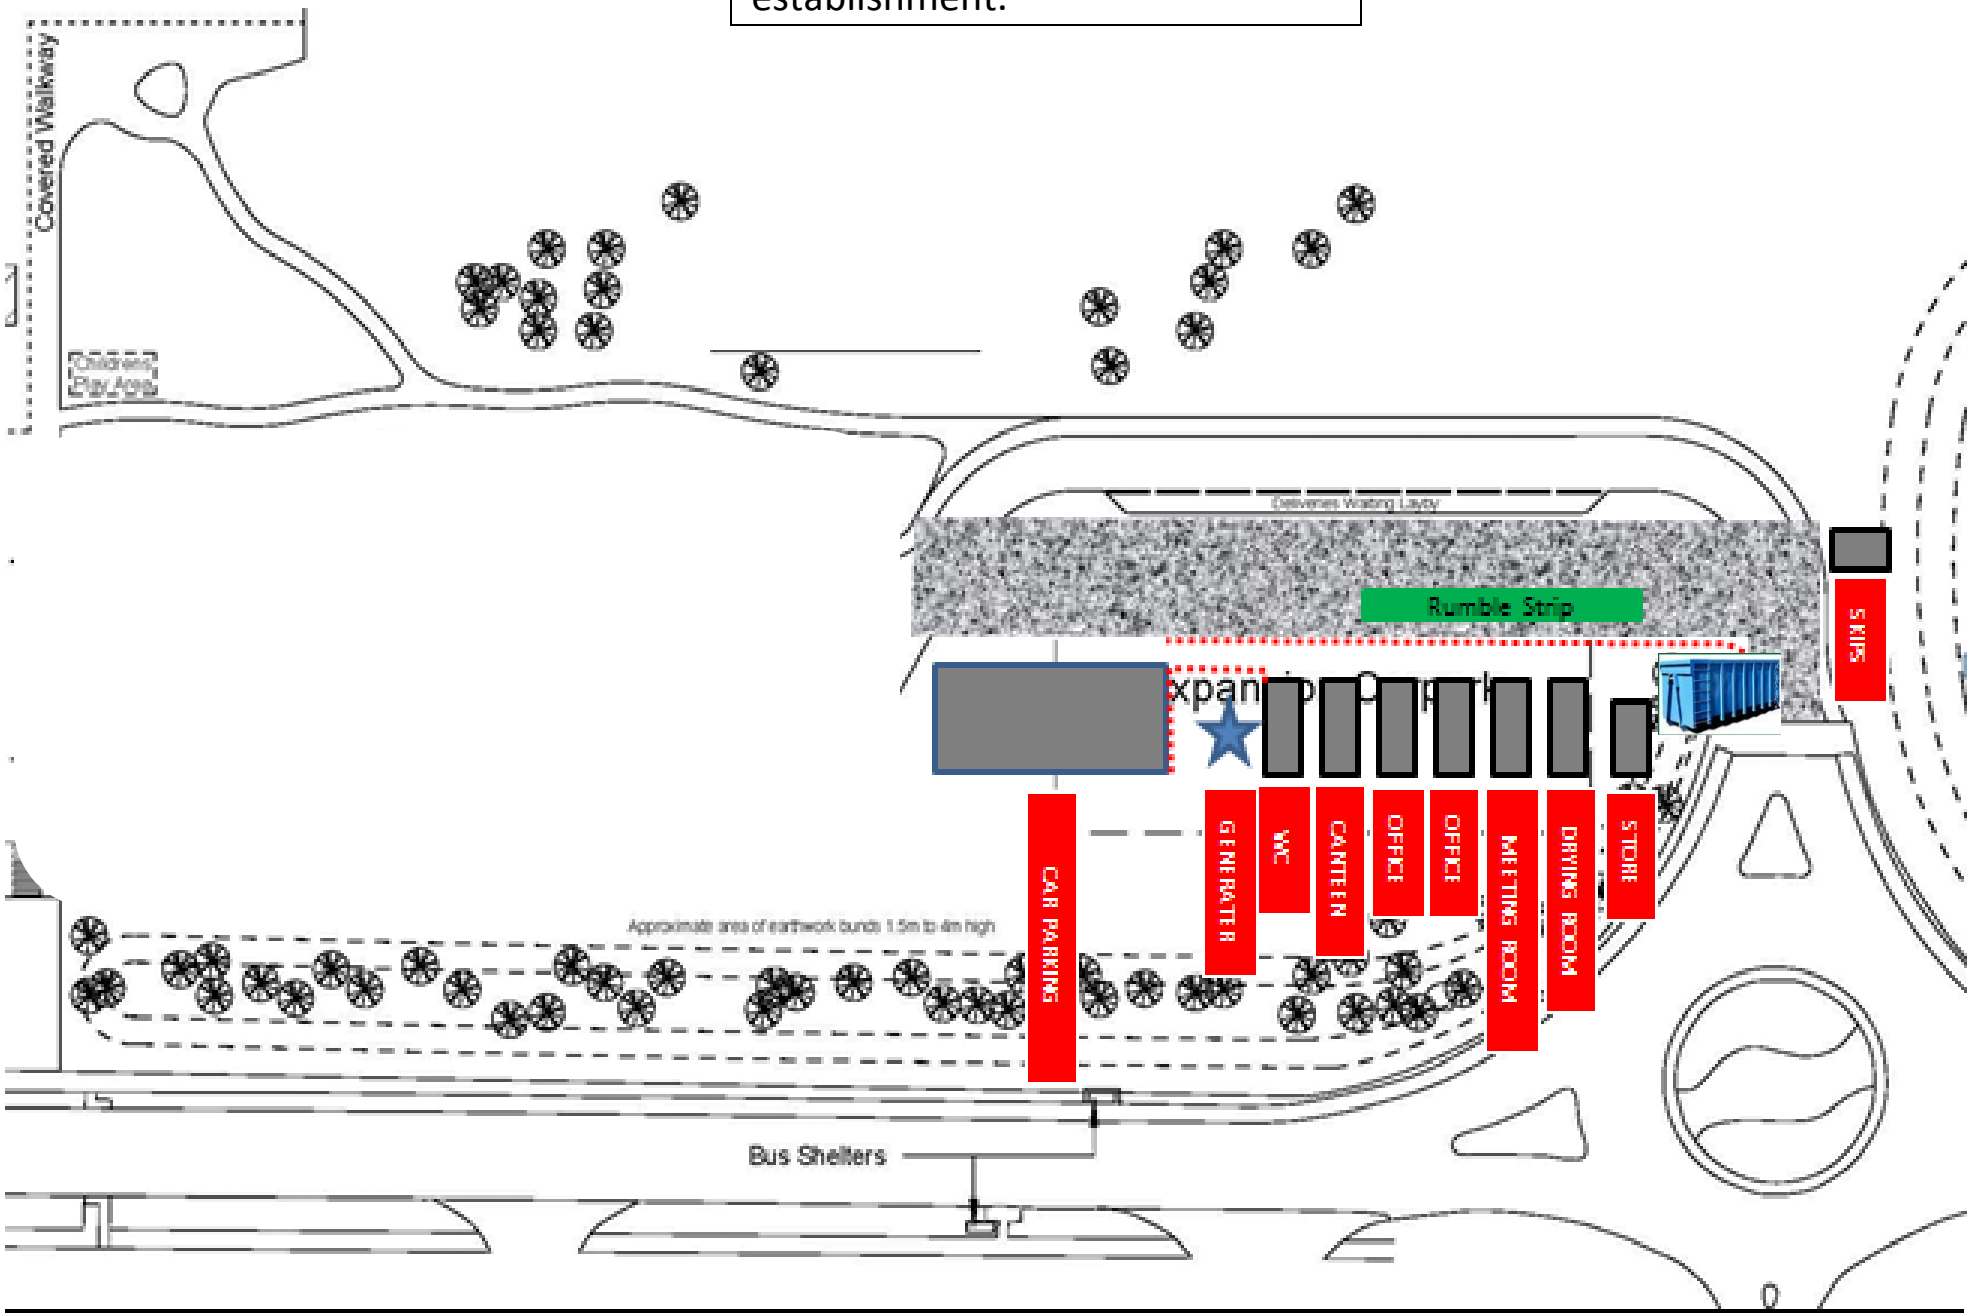

Pilsworth, Bury

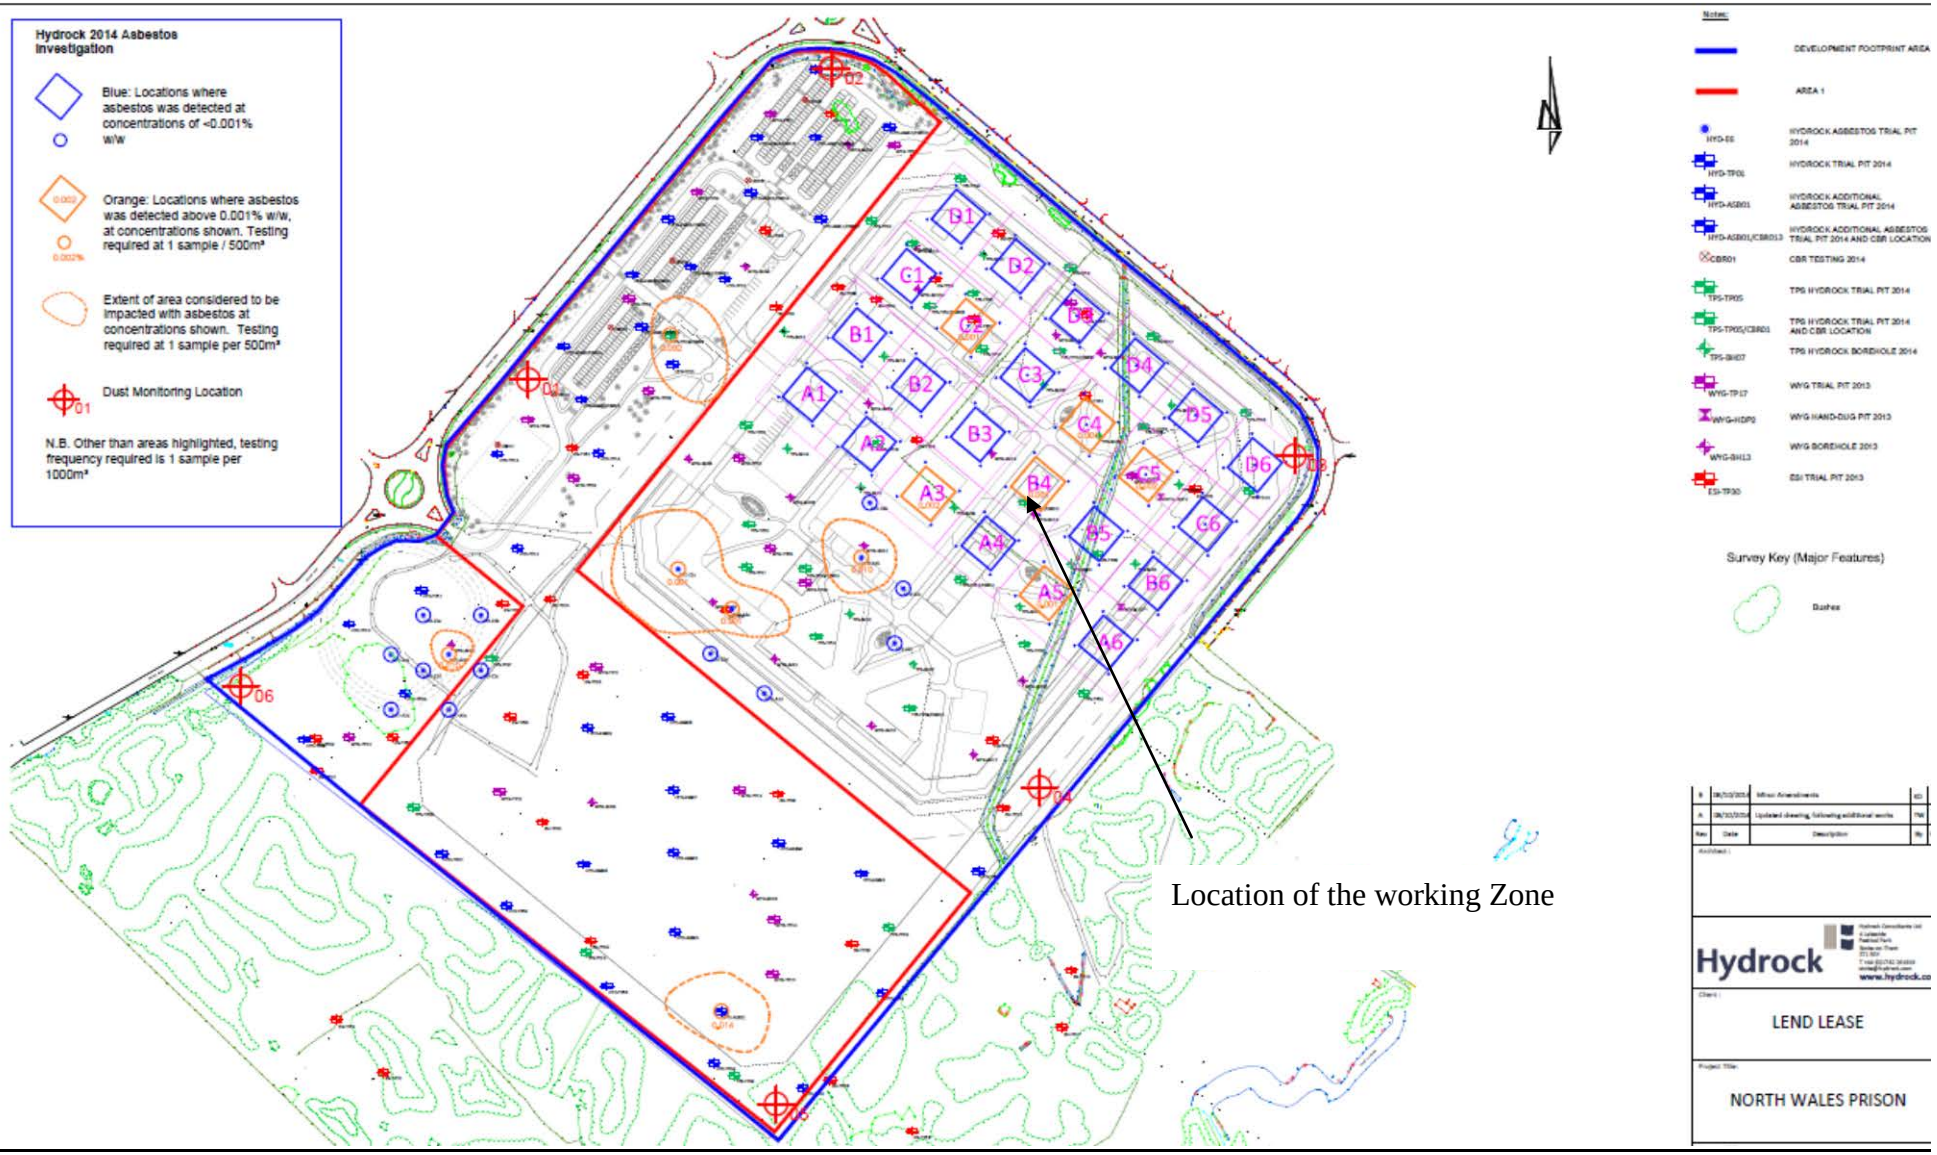

This page is left intentionally blank

Outline of the working area in stage 3 the line will be marked out by red hills as this will determine the extent of the contamination

Preparation for entering a Contaminated Area No Enclosure for operatives

Enter the decontamination facility via the external door to the “clean” section.

Check RPE and record details in the site diary, put on cleaned and checked RPE and ensure a good fit using the mirror in the “clean” section.

Dress in new disposable white stripping overalls, over the top of the general work wear ensuring all underclothing is covered.
Pass through the external door of the “shower, dirty” section and walk strictly via the transit route into the working area.

Leaving a Contaminated Area No Area

Prior to leaving the working area vacuum off PPE and RPE.

Proceed to decontamination unit strictly via the transit route.

Enter decontamination unit through external door into “dirty” section. Remove overalls and footwear

DO NOT REMOVE RESPIRATOR

Pass through the connecting door into shower section, clean hands paying particular attention to fingernails with the nailbrush provided, clean face that has not been covered, remove respirator and clean and dry and Exit shower

SECTION 8 – DOCUMENTS ON SITE

The following documents are kept on site:

- Copy of Licence
- ASB 5
- Employees records (Training, Medicals, Face fit certificates)
- Work zone inspection records
- DCU inspection records and DOP certificate for NPU
- Vacuum inspection records and DOP certificates
- RPE inspection records
- Air monitoring results
- Exposure details (weekly)
- Mask servicing certificates
- Permit to work documents

SECTION 9 – FIRE PROCEDURE

Fire Action

All personnel are to report to the fire assembly point shown on the sketch plans.

Anyone discovering a fire must raise the alarm.

SECTION 10 – QUALITY ASSURANCE

This document has been prepared and published by the undersigned using information provided in contract documents, and on the basis of site meeting/site visits.

Name: Carl Robinson

Position: Contracts Manager

Signature: 

Date: 02.04.15

This document has been proof read and checked by a member of the contract support team to ensure it is of an approved quality standard prior to issuing to site.

Name: Luke Gumbley

Position: Contract Manager

Signature:

Date: 02.04.15

SECTION 11 – SITE INDUCTION

The Supervisor is responsible for reviewing all methods contained within these documents as the work proceeds. Any amendments or revisions identified either before or during the contract should be directed to the Asbestos Contracts Manager for approval and incorporation into the latest revision. Any changes or amendments will be communicated to all parties concerned.

To be signed by Site Supervisor and all Operatives after reading the Method Statement and Asbestos Assessment.

I have had the method of work explained to me and I have read and understood the Method Statement, Asbestos Assessment and the documents detailed.

HSE

Health and Safety Executive

Health and Safety at Work etc Act 1974
Control of Asbestos Regulations 2012

Licence to undertake work with asbestos

Licence Number 051504953

The Health and Safety Executive, in pursuance of the powers conferred on it by the Control of Asbestos Regulations 2012, licences

Bagnall (UK) Limited
Lexia House
West Yard
Lyncastle Way
Barleycastle Trading Estate
Appleton
WARRINGTON
Cheshire
WA4 4ST

("the licensee")

to undertake work with asbestos subject to the conditions below. The licence is granted from **25 February 2015** and shall remain valid until **24 February 2018** unless revoked in writing by an authorised Person.

CONDITIONS

1. This licence or a copy thereof, should be made available on request by the licensee for inspection by any person to whom the licensee submits a tender or quotation for work with asbestos and shall be available for inspection at all worksites.

2. The licensee shall give notice in writing of the work to the appropriate HSE or local authority office at least 14 days before the work is commenced, or such other period as the authority will allow. The notice shall specify the type of work to be carried out, the likely duration of the work, the address of the premises at which the work is to be carried out and the date of commencement of the work activity. The enforcing authority must be informed in writing as soon as possible if this information changes. This condition will only apply to licensable work with asbestos as defined in Regulation 2 of the Control of Asbestos Regulations 2012 or when the licensee hires out employees (at operative level) to other licensees.

3. (a) Prior to submitting the notice of work required by Condition 2 the following documents shall be prepared by the licence holder:

   i) a suitable and sufficient written statement of the plan of work to be used.
   ii) a suitable and sufficient written specification for the equipment for the protection and decontamination of those engaged in asbestos work and also for the protection of other persons, as appropriate to the work.

   (b) The licensee shall, on request by HSE and/or the local authority provide copies of the documents referred to in 3(a) and/or allow inspection of those documents as required.
   (c) Work carried out under the notice of work required by Condition 2 shall be carried out in accordance with the suitable and sufficient plan of work and the equipment, as specified in (a) (i) and (ii).

The plan of work and written specification must be provided on request and be available at the time of notification.
