Hello Sharon

I carried out some background monitoring last night (accompanied by Paul Campini) on the proposed site.

At the measurement location referred to as MP3 in the ENS noise report, I recorded significantly higher night-time noise levels:

23:05 to 23:20 hours:

Leq - 52.1 dB(A)
L90 - 50.0 dB(A)
L10 - 53.0 dB(A)
Min L - 48.4 dB(A)
Max L - 55.6 dB(A)

23:23 to 23:38 hours:

Leq - 52.0 dB(A)
L90 - 50.1 dB(A)
L10 - 52.6 dB(A)
Min L - 47.6 dB(A)
Max L - 56.1 dB(A)

The weather was cold and dry with a gentle south westerly breeze. Distant air handling plant type noise from Kronospan. The dominant noise for the duration of the measurements was air handling plant/compressor type noise from Mondelez' site (formerly Cadburys). There were very few other environmental noises evident.

It is very important that appropriate sound mitigation measures are incorporated into the design of the proposed residential properties to protect the amenity of future residents from factory noise. I do have concerns that the ENS noise monitoring does not represent a worst case scenario due to the significantly higher levels that I recorded.

Regards Nick
