Consultation Response for Land Off Rackery Lane, Llay, Wrexham: Draft GCN Method Statement

The attached draft Method Statement is provided in response to the consultation request for further information on the proposed GCN mitigation scheme for the above application site.

It provides information regarding methodologies, best practise and management protocols that will be adhered to throughout the life of the project and into operation and allows an assessment.

The information is provided in the Natural Resource Wales method statement template as the information requested is essentially that which will form the basis of the licence application.

However, it is by necessity a working draft as planning permission is not yet granted and there has as yet been no engagement directly on this issue with Natural Resource Wales.

The information provided may therefore be subject to revision, for example in response to design amendments or refinement of supporting figures (Figures D1 and E1 and E2 will require further detail/clarification) and in response to Natural Resource Wales comments through the application process.

However there is sufficient detail to determine compliance with and adherence to standard methodology and best practise, efficacy of mitigation, robust biosecurity and site management (both pre and post development).

Yours sincerely
