

Window Cills

R & A

Standard Window Cills

Chester, Epsom, Recar, Goodwood & Kempton

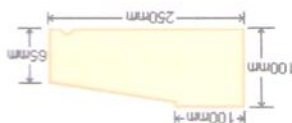

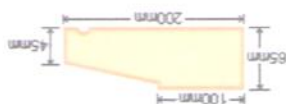

The above window cills are our standard range designed to suit either one or two brick courses. They can be either manufactured with or without stolling. Water bar grooves can be cut into cills on request for a small charge. All window cills over 1500mm in length will be manufactured in two or more pieces. When ordering cills please state whether the dimension is the window opening or overall length.

We still manufacture the traditional standard length cills, i.e. 488mm, 630mm, 915mm etc etc. However with the new technique of fabricating UPVC windows, builders are no longer constrained by sizes. Therefore we offer the service of manufacturing your window cills to your precise opening.

Slip Cills

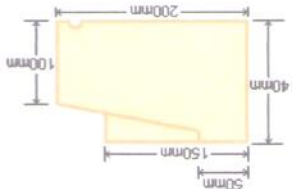

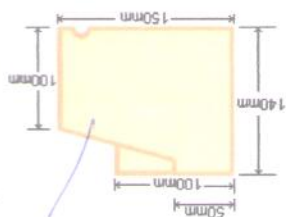

Chester suitable for sitting on the front skin with the window frame no more than 25mm back in the reveal (no stolling)

Epsom designed to sit on the front skin closing the cavity slightly. Suitable for when the window frame sits further back in the reveal. Ideal for some box sash windows (no stolling)

Recar can be used to sit across the cavity. Popular with the older property (no stolling)

Stooled Cills

Goodwood a popular modern design found in most new developments. Designed to be used with a cavity closer (100mm stolling comes as standard).

Kempton a more traditional style cill suitable for the older property or commercial development. (100mm stolling comes as standard).
