

GreenWalling Solutions

LivePanel

Suppliers and Installers of Mobilane products

Our brand new mark 2 LivePanel system is much simpler and easier to install and maintain than ever before. LivePanel uses the newly developed plant cassette system which consists of a capillary irrigation system to draw water into its specially nutritionally balanced substrate, this is kept at precisely the right moisture content, this ensures the plants have the right amount of water at all times, greatly reducing the risk of plant failure. LivePanel doesn't need to rely on a power supply, pumps or internal pipe work. This not only makes the system a lot simpler but also very competitively priced.

Variety and flexibility

The flexibility of this system allows unlimited aesthetic possibilities to all those involved with the design and construction of living walls. With the right choice of plants, the walls can be installed either outside or inside, and by using different species of plants, it's possible to achieve interesting and colourful combinations. With over 30 years horticultural experience we can help with the choices of plants which will produce the best results in your location.

Low maintenance

The LivePanel system requires very little maintenance, the rooting substrate is provided with an internal capillary irrigation system, providing both water and feed. Hedera screens can carry out a programme of routine health check visits to suit your budget.

Key facts

- No electrical power required
- Lighter than our earlier version
- Compatible with most types of walls
- Bespoke sizes available
- Very competitively priced
- Only 100mm depth from the wall
- Internal capillary irrigation system
- Easy and cost effective to maintain
