YOUR COMMENTS ON THE CASE

Please provide your representation below.

The Government should NOT legislate to provide underground access to gas, oil and geothermal developers below 300 meters, or at any level. All scientific research supports the view that fracking is dangerous, both to health of people and other living things in the vicinity, and to the stability of the ground and water sources.

The Prime Minister is not willing to disclose his personal views on fracking and in particular whether he would be happy for drilling to take place under his property. If David Cameron is not prepared to say publicly that he is not concerned then how can he be so complacent and impose it on the rest of the country?

In addition the idea of payment and notification for access to be administered through the voluntary scheme proposed by industry is outrageous. If the extraction of this energy is so important then the people affected should be fully compensated for the suffering they will experience. This will include damage to house prices and serious illnesses. This can only be

YOUR COMMENTS ON THE CASE (Continued)

assured if administered by an independent organisation. Voluntary schemes will try to maximise profits with derisory payments.

The alternative to fracking, which has a huge amount of scientific and public backing, is to invest in renewable energy which, unlike fracking will not poison the ground, cause droughts, add to climate change and endanger health. Renewable energies are already financially competitive with fossil fuels and will only continue to improve. They offer an unlimited source of clean energy.
