DATE 3rd August 2014

REF PLEASE REJECT APPEAL BY GP ENERGY AND
REJECT PLANS FOR EXPLORATORY DRILLING
FOR COAL BED METHANE AT BORRNAS IN
WREXHAM (REF: P 2013 0660)
(WELSH GOV REF: H695/A/14 222 18276

Dear Sir or Madam,

I am writing to ask you to reject the
application for coal bed methane in part
of the field west of Cennenwood Farm and
South of Borrnas Road, Cennenwood, H&Ld, Wrexham,
for the following reasons:

1. Risk of water contamination, as there is
a nearby aquifer. The Welsh government
should apply the precautionary principle
to water protection - are you?
2. Insufficient regulation: as you will know,
cuts and deregulation mean that, even
if regulation were able to reduce risks,
this will not be the case.
3. Local disruption: road traffic, a big ugly
fossil fuel infrastructure. I am on holiday
here and if there were CBM (or Frackip)
I would certainly think twice about
coming back. That's not good for
the local economy.
4. Relationship to points 1 and 3, Germany
has banned Frackip for least due
to unhappy beer makers - because
of the risk to water. Similar risks
apply to agriculture. Don't allow

these companies the rights to trash
your beautiful part of the country.

5. We need to invest in renewables
and efficiency instead.

Even if there were no local
environmental and health risks
at all, you should still reject
this planning application.

This is the most important point.
Firstly because of climate change.
The Welsh gov^t supposedly is
better than this miserable Coalition
on environmental matters,
especially climate change.

* When we know that $\frac{2}{3} \rightarrow \frac{4}{5}$ of
existing fossil fuels cannot be
burned if we are to keep
climate change below the 2° danger
threshold, (see IEA / carbon tracker).

Therefore, giving the go-ahead to
unconventional fossil fuels flies
in the face of planning rules
on climate change.

And our moral responsibility to
children + future generations.

Just say no to unconventional
Cornil Net companies.

Do it to support the Welsh green
economy of the future, not the
fossil fuel companies of the past.

Do it to show a better green
future is possible - and stick ~~the~~
fingers at England / Westminster
and their cosy corporate oil + gas
take over.

Do it to support a renewable future
where communities and localities
can start taking ownership of
their own, sustainable energy ~~growth~~.

Thank you for considering these points,
I look forward to your response -
especially on climate.

Yours Faithfully

Address: Flat 36,
Hawthorne House, Grovelands
Road, London, N15 6BW

this is
my
main
objection
