3rd August 2014.

To The Planning Inspectorate.

I am fully advised in management of our land resources, having recently made a point of studying an MSc in Countryside Management because this is a subject dear to my heart - I watched my father and mother slave for years to make a honest living as farmers, working their hands literally to the bone to raise 3 children who would work hard, care about the world and be good citizens. Caring about our countryside is a serious issue which has potentially the drive to create and look after our country and improve our resources however I cannot see how Coal Bed Methane extraction can ever fulfill any useful energy supply role - short term thinking - we know our water supplies are important - look at the droughts that hit the farmers a couple of years back - This issue is desperately requiring someone to understand 'The Precautionary Principle' - An Environmental Impact Assessment

is a necessary requirement for anyone who wants to
use the countryside! A music event of 500 people in
a small field really needs an environmental impact
assessment - how can something that has the potential
to deteriorate the view, the habitat the water and
noise pollution + road traffic not require an
Environment Impact Assessment - This is ludicrous -
forcing policies to fit actions.

I am asking you to consider Planning reference:
P 2013 0660 - Welsh Government Reference: H6955/A
1/14/2218276

Description: Part of field west of Commonward Farm
and south of Berrow Road, Commonward, Holt, Wrexham.

Even if these resources were necessary - ~~your~~ ^{the} regulation
system is a mockery - implementing regulations after!
incidents - see Lancashire Trading Site. The countryside is
being put behind economics and we are risking our
most valuable! resource with too much scientific
evidence pushing in the opposite direction.

Please do not allow any planning for Wrexham
Berrow Gilling.

Thank you.

Kind Regards.

Annie Thurgood
