Important Issues

1. Usage of the above information is governed by Cofnod's **Terms and Conditions of Data Release** (available from Cofnod on request).
2. Records shown in bold typeface are sensitive species records. In this public version of the original report, the resolution of sensitive species grid references have been reduced and site names and comments have been removed.
3. Past records of presence of a habitat or species do not guarantee continued occurrence; absence of records does not imply absence of a species, merely that no records are held at Cofnod; Cofnod cannot guarantee the accuracy of supplied data; copyright of records remains with the original recorder.

Notes

This report should be used in conjunction with any relevant maps, where these are supplied.

Cofnod uses a search system which reports all priority or protected species within a specified search radius or buffer. Where required a search will also include high priority 'Mobile Species', such as bats, otters, amphibians and certain invertebrates, which lie outside the specified search radius. These species are highlighted on the report with an **asterisk**. They have been selected as 'Mobile Species' as their territory (possibly due to foraging activity or life cycle) could intersect with the search radius.

Records with 4 figure grid references are displayed as 1km squares on any relevant maps. They are listed separately in reports and highlighted in grey *italic* script.

Sites - Designated Sites and Wildlife Sites which fall within 50m of the grid reference are highlighted in red.

Dataset ID - All species records within the reports include Dataset ID codes, which can be used to cross-reference back to the relevant Metadata. The number below the Dataset ID is the individual record ID. Please quote this if you need more infomation on a specific record.

'V' column - Record Verification Level, for records from Category 5 and 6 datasets only. The following abbreviations apply: **4**: Probably correct, **5**: Known correct, **6**: Unconfirmed. Dataset Categories and Record Verification Levels are explained in more detail within Cofnod's policy on Data Quality, and Dataset Categories are listed within the Metadata report which accompanies this report.
