Fax to

Subject Cefn Y Bedd restoration - noise monitoring and modelling

Hannah,

Following earlier correspondence we conducted background noise measurements at the site to establish the base figure, and then revised the proposed working so that the predicted noise generation would not exceed the background by more than the 10dB(A) threshold recommended in MPGs.

To achieve this limit, the applicant has withdrawn his intention to screen or crush materials at the site to recover recyclable materials. This removes the potentially noisiest operations from the plans.

We attach our report 'Measurement of Background Noise' July 2012 setting out the measurement, re-modelling and proposed alterations to the working plan.

We trust that this will overcome the concerns regarding noise at this site.

With kind regards,

Steve
