

Hello

I am sending this email in response to your letter dated 01/06/12 regarding planning application P/2012/0102 – Baptist Church, New Road, Wrexham.

I have previously raised issues about this application and these still stand, one concerning the window overlooking over looking our property and the second was about the parking.

I want to add some further detail about our huge concern over the fact that this property application included parking at the front of the property. This would mean that the pavement would need to be lowered to give them access and as a result of this would restrict our parking space in the front of our property. There are four houses in our terrace and only one house has off street parking, we currently use part of the road area in front of the church to ensure our cars and the neighbours cars fit safely and do not obstruct the very busy junction. There have been accidents on this junction in previous years and a filter lane has been put in as this is an extremely busy junction. If we have to park further up the road it will not be safe for traffic or us.

The terrace rows further down all have off street parking but not all residents use this so there is no space at times to park further down. If we could get parking behind our property like all the other residents then this would alleviate the problem as we would not need to park by a busy junction and the parking for the church would not impact us.

Please consider our comments as this is a real safety issue for us all.

If you require anything else please let me know.

Regards,

Jane and Pete Millbank
