Subject: RE: P/2010/0881 - Condition no. 14 - Dust Management Scheme

Sharon,
The following item is contained in the CDM Regulations Pre-construction Information Pack issued to each tenderer, for the successful one to include in their Construction Phase Plan.

>Dust
>The principal contractor must details how the creation of dust during construction is to
>be managed.
>When working adjacent to occupied areas measure must be implemented to
>prevent the airborne movement of dust into these areas.
>The method of dust suppression/control must be detailed along with the
>house keeping measures proposed to control the potential dust nuisance created by the
work.

The Construction Phase Plan has to be submitted and approved prior to works commencement on site.
We will therefore submit the Dust Management Plan, contained within the Construction Phase Plan, as prepared by the successful contractor for your approval prior to works commencement on site.

Regards
Myles

Pete,

Further to your submission of the dust management scheme on Tuesday (condition no. 14), I have consulted with the public protection team and the details submitted are not considered to be acceptable.

The scheme needs to be site specific and I have attached an example document so that you can see the format required for the submission.

Regards
Sharon
