composite windows

Our range of windows will enhance the appearance of any traditional or modern building. Composite provides a 'no maintenance' visual statement, combined with the endless choice of colours and slim sightlines you can rest assured our windows will stand the test of time.

As standard, all our windows are supplied with argon gas filled soft coat glass with warm edge spacer bar technology, this ensures you have the optimum in efficiency for years to come.

With the option of solar control or the revolutionary self cleaning glass, you can be assured whatever the application, composite has the versatility to be different.

composite doors & bifold doors

Our versatile range of doors and bifold doors will greatly enhance the style and space of your home. Bifold doors also act as a secure barrier in the harshest of environments and move effortlessly aside to bring the warmth and beauty of summer into your home.

If you would like to bring the outside in, or visually connect internal spaces, Bifold doors have endless possibilities.

Bifold doors allow unimaginable amounts of natural light within any room, whilst remaining elegant and impressive at all times.

Our system will maximise all space within your room, with the flexibility of opening in or out or being able to stack left or right. In addition, there is a limitless choice of RAL colours for both the aluminium and for the wood.

composite conservatories & orangeries

Orangeries attain a unique character that sets them apart from conservatories, they have evolved over time and now orangeries are generally defined as having one or more lantern roofs.

Orangeries provide unique multi-purpose living space and are frequently used as kitchen extensions.

Recently we have seen a significant growth in their popularity.

Conservatories provide that much needed extra space to enjoy meals with friends, play with the children,

or simply relax and unwind. However you choose to use it, a conservatory will transform the way you live in and around your home.

composite commercial

Architects are ever increasingly specifying composite as the product of choice. The benefits of using composite in both commercial and residential applications are plain to see.

This durable and efficient system is equally at home in a multitude of applications from schools, hospitals, colleges and banks to self build or replacement projects. With the vast array of external RAL colours and the internal warm finish of hardwood, combined with increased levels of security and efficiency, composite is ever increasingly becoming the product of choice.

composite what is it

Composite is the combination of aluminium and timber, both materials have been carefully selected to ensure the customer has the ultimate high performance product available. Composite combines the finest materials used within the fenestration Industry.

Aluminum is one of the most commonly used metals in the world. The superb properties make this the perfect material for use within our industry. With its high strength, low weight and excellent resistance to corrosion, aluminum has the durability to stand the test of time.

The external powder coat finish is available in all RAL colours thus ensuring each project is tailored to the individuals requirements.

American Ash- is a consistent durable hardwood commonly used throughout the high class construction industry. American Ash is similar in appearance to European Oak and has excellent machining and finishing properties combined with the sustainability of being FSC sourced.

composite performance

The performance of our composite system is testament to the materials selected. The polyester powder coat external finish is able to perform throughout all residential and commercial applications. All our aluminum profiles are chemically pre-treated prior to coating which is a fundamental requirement, processed in accordance with strict guidelines developed by our Qualicoat approved applicators and as specified in BS12206-1.

The aluminum profile also has a specifically rolled polyamide thermal barrier to ensure optimum efficiency and reduce heat loss, thus saving on heating bills for years to come. The American Ash hardwood internal continues the warm appearance and further enhances insulation.

Our suppliers are members of the Forest Stewardship Council-(FSC), this ensures all the timber used in our production is traceable, thus ensuring less impact on our increasingly important environment. All our products are finished to the highest standard, the water based microporous stains and lacquers ensure a long lasting durable finish. Microporous paints allow the surface to breathe, this reduces the risk of flaking or blistering commonly associated with more traditional coatings.
