23/06/2021

Dear Sir/Madam,

PROPOSAL: OUTLINE APPLICATION (ALL MATTERS RESERVED) FOR 1 DWELLING

LOCATION: LAND ADJACENT TO THE WILLOWS, THE CADNEY, BETTISFIELD, WREXHAM

Thank you for consulting Cyfoeth Naturiol Cymru / Natural Resources Wales about the above, which we received on 07/06/2021.

We have concerns with the application as submitted because inadequate information has been provided in support of the proposal. To overcome these concerns, you should seek further information from the applicant regarding foul drainage. If this information is not provided, we would object to this planning application. Further details are provided below.

Foul Drainage

We understand that the development is not served by the public foul sewer and that no information has been provided on foul drainage / any proposed private sewerage system. In these circumstances Welsh Government Circular 008/2018 advises that a full and detailed consideration be given to the environmental criteria listed under paragraph 2.6 of the Circular, in order to justify the use of private sewerage. In this instance, no information has been submitted.

The application does not, therefore, provide a sufficient basis for an assessment to be made of the risks of pollution to the water environment arising from the proposed development. In particular, the submitted application fails to show that disposal of foul effluent would be effective at this location. The developer has not submitted any porosity/percolation testing results. Nor are there calculations for the specific size of any proposed soakaway(s) or the location of the discharge of foul effluent.

As the area already has a number of private sewage treatment systems, we are concerned about the cumulative impact of the additional discharges on the water environment. Therefore, we advise that details of the location and size of any proposed soakaway(s)/drainage field along with percolation test results, are submitted prior to the determination of the application.

The developer should ensure there is sufficient space to install a drainage field as set out in BS 6297:2007+A1:2008.

On receipt of the above information we will review our position and advise your Authority accordingly.

The Applicant should be aware that to operate a private sewerage system, they will need to apply for an environmental permit or register an exemption with us. Septic tanks and small sewage treatment works may be registered as exempt from the requirement to obtain an environmental permit if certain criteria are met. Please note, should a permit be required, further information may be required as part of that application and the Applicant is therefore advised to hold pre-application discussions with our Permitting Team on 0300 065 3000, at the earliest opportunity, to try to ensure that there is no conflict between any planning permission granted and the permit requirements. It is important to note that a grant of planning permission does not guarantee that a permit will be granted, should a proposal be deemed to be unacceptable (either because of environmental risk or because upon further investigation, a connection to mains sewer was feasible). The Applicant should ensure that they have all the required permissions, consents, permits and any other approvals in place prior to commencement of works on the site.

More information, including a step by step guide to registering and the relevant application forms are available on our [website](#). Where private sewage treatment/disposal facilities are utilised, they must be installed and maintained in accordance with British Standard 6297 and Approved Document H of the Building Regulations. We also refer the Applicant to Guidance for Pollution Prevention 4 on the [NetRegs website](#), which provides further information.

Protected Species

We note that there is no information about protected species with the application and, therefore, are assuming that your Authority has screened the application and concluded that there is not a reasonable likelihood of protected species being present.

Land Contamination

Natural Resources Wales considers that the controlled waters at this site are not of the highest environmental sensitivity, therefore we will not be providing detailed site-specific advice or comments with regards to land contamination issues for this site.

Natural Resources Wales recommends that developers follow the requirements of Planning Policy Wales and should:

1. Follow the risk management framework provided in [Land contamination risk management \(LCRM\)](#).
2. Refer to '[Land Contamination: a guide for developers](#)' (WLGA, 2017) for the type of information that we require in order to assess risks to controlled waters from the site. The Local Authority can advise on risk to other receptors, such as human health.
3. Refer to our [groundwater protection](#) advice on www.gov.uk.

These comments are based on our assumption that gross contamination is not present at this location. If, during development, gross contamination is found to be present at the site the Local Planning Authority may wish to re-consult Natural Resources Wales.

Other Matters

Our comments above only relate specifically to matters included on our checklist, Development Planning Advisory Service: Consultation Topics (September 2018), which is published on our [website](#). We have not considered potential effects on other matters and do not rule out the potential for the proposed development to affect other interests.

We advise the applicant that, in addition to planning permission, it is their responsibility to ensure they secure all other permits/consents/licences relevant to their development. Please refer to our [website](#) for further details.

Advice for the developer

Pollution Prevention

During the construction phase you should take any precaution to prevent contamination of surface water drains and local watercourses. Oils and chemicals should be stored in bunded areas and spill kits should be readily available in case of accidental spillages. For further guidance please refer to GPP 5 and PPG 6 at the following link:

<http://www.netregs.org.uk/environmental-topics/pollution-prevention-guidelines-ppgs-and-replacement-series/guidance-for-pollution-prevention-gpps-full-list/>

Environmental Management

All works at the site must be carried out in accordance with PPG6: 'Working at construction and demolition sites' which are available on the following website:

<http://www.netregs.org.uk/environmental-topics/pollution-prevention-guidelines-ppgs-and-replacement-series/guidance-for-pollution-prevention-gpps-full-list/>

The activity of importing waste into the site for use as, for example hardcore, must be registered with Natural Resources Wales as an exempt/permittable activity under the Environmental Permitting Regulations 2016. The developer should contact Natural Resources Wales to discuss the necessity for an exemption/permit for any material imported to and exported from the site.

If during construction/excavation works any contaminated material is revealed, then the movement of such material either on or off site should be done in consultation with Natural Resources Wales. Any waste excavation material or building waste generated in the course of the development must be disposed of satisfactorily and in accordance with Section 34 of the Environmental Protection Act 1990. Carriers transporting waste from the site must be registered waste carriers and movement of any Hazardous Waste from the site must be accompanied by Hazardous waste consignment notes.

Waste produced during construction

Waste produced during the construction phase of your development must be dealt with appropriately and be in line with all relevant waste legislation including Duty of Care Regulations and Hazardous Waste Regulations. As part of your waste duty of care you must classify the waste produced:

- before it is collected, disposed of or recovered
- to identify the controls that apply to the movement of the waste
- to complete waste documents and records
- to identify suitably authorised waste management options
- to prevent harm to people and the environment.

Any waste removed from site will be subject to waste management controls. The links below provide information on how to classify waste and register as a waste carrier or hazardous waste producer:

<https://naturalresources.wales/permits-and-permissions/waste/?lang=en>

<https://naturalresources.wales/permits-and-permissions/waste/waste-permits/?lang=en>

Further guidance can be found on the GOV website here:

<https://www.gov.uk/managing-your-waste-an-overview/duty-of-care>

If you have any queries on the above, please do not hesitate to contact us.

Yours faithfully,

Tristan Williams

Cynghorydd - Cynllunio Datblygu / Advisor - Development Planning
