Hi Lorna

Please find attached the report you requested in your letter dated the 26th Jan. 2010. Flintshire Woodlands visited the site on 27th Jan. 2010 to compile their report. I phoned your office today 28th Jan. to discuss the content of this e mail and was informed that you are off and will be back on Monday 1st Feb. As you mentioned in your letter, time is running out on this planning application. I would be grateful if you could contact me on your return to discuss the report and whether you require any further information.

Regards

Neal Morris

Subject: Tree Report at New Sontley Farm

Following the recommended tree surgery work to the two limes carried out Tuesday morning 26th January 2010. The following is the current crown spread and height of the trees.

Tree number 0801

Height - 18 metres

Branch spread - North 8.3, East 8, South 6.8 and West 3

Tree number 0802

Height - 7 metres

Branch spread - North 2.3, East 2.8, South 4.4 and West 3.1

RPA

Root Protection Area of twelve times stem diameter is not required as the amount of dynamic mass within the retained trees is significantly reduced, tree 0801 by one third and tree 0802 by two thirds or more. Therefore the RPA of 0802 would reduce from a radius of 19.2m down to 6.4m and 0801 from 18m down to 12m. These new radius's have been plotted with a green outline.

The Trees

We believe that the large reduction of tree size was prudent due to the fair and poor condition of the trees.

The progressive dieback of tree 0801 could continue. This retrenchment pruning will serve to prolong the dynamic life probably resulting in a new full crown as can be seen to the large reduced lime to the south of the existing cattle shed. This need for pruning can also be justified when one can see the catastrophic failure of similar aged lime tree again to the south east of the building.

Regards,

Ben Kearsley
